Oliy matematikadan misol va masalalar. 2-jild. /Darslik/.

-T.: «Zebo prints», 2022. 360 bet.

ISBN 978-9943-8465-7-9

Darslik muhandis-texnika sohasidagi bakalavriat ta'lif yo'naliishlari uchun mo'ljallangan. Kitob ikki jilddan iborat. 1-jild 7 bobni, 2-jild 9 bobni o'z ichiga oladi. Darslikdan kunduzgi, kechki va sirtqi bo'lim talabalari foydalanishlari mumkin.

UO'K: 512/512(075.8)

KBK 22.11ya7

Mas'ul muharrir:

A.S. Sharipov – fizika-matematika fanlari doktori, MMFI Milliy tatqiqotlar yadro universiteti Toshkent filiali.

Taqrizchilar:

V. R. Xodjibayev – fizika-matematika fanlari doktori, NamMQI professori;

M. M. Raxmatullayev – fizika-matematika fanlari doktori, NamDU professori.

O'zbekiston Respublikasi Oliy va o'rta maxsus ta'lif vazirligining 2022 yil 17-martdagи 106-sonli buyrug'iga asosan darslik sifatida nashr etishga ruxs at berildi (№ 106-122).

SO'Z BOSHI

Mamlakatimizda ta'lrim tizimini isloh qilishga va uni zamon talablari bilan uyg'unlashtirishga katta ahamiyat berilmogda.

Ayniqsa, matematika fanining o'rni, uning barcha fanlarni o'zlashtirishga va ularning rivojiga asos ekanligini hisobga olib, uning rivojiga alohida e'tibor qaratilmoqda. Maktabgacha ta'lrim muassasasidan boshlab, o'rta ta'lrim maktablari hamda oliy ta'larning mavjud dasturi zamon talabiga javob bera olmay qolgan o'rinni ravishda tanqid qilindi.

Darslik 16 bobga, ya'ni birinch jild 7 bobga, ikkinchi jild 9 bobga ajratilgan. Har bir mavzuda asosiy tushunchalar va muhim formulalar keltirilib, mavzuga doir tipik misollar yechib ko'rsatilgan. Dars jarayonida va mustaqil ishslash uchun masalalar berilgan. Masalalar osondon murakkabga prinsipi asosida joylashtirilgan. Har bir mavzuda murakkab masalalar * va ** belgisi bilan ajratilgan. Barcha masalalarning javoblari keltirilgan.

Davr talabidan kelib chiqib, darslik amaliy mashg'ulotlarda va mustaqil o'rganish maqsadida foydalanishga mo'ljallangan.

Darslikdan **amaliy mashg'ulot jarayonida** foydalanishda mavzuga doir asosiy tushunchalar amaliyot o'qituvchisi tomonidan keltirilib, tipik misollar yechib ko'rsatilgandan so'ng, misollarni ishslashga malaka hosil bo'lgach, masala ishslashga kirishish mumkin.

Mavzuni mustaqil o'zlashtirishga kirishishda, avvalo, diqqat bilan asosiy tushunchalar va formulalarni o'zlashtirib, so'ngra yechib ko'rsatilgan masalani tushinib olish va uni mustaqil ravishda yechib chiqish hamda ishlaniishi bilan solishtirish kerak. Agar ishlangan masala yoki misolingiz kitobdag'i yechimga mos kelsagina, berilgan masalalami ishslashga o'tish maqsadga muvofiq. Aks holda, yana qayta boshdan yoki xatoga yo'l qo'yilgan joydan qayta ishlab chiqish kerak bo'ladi.

Birinchi jild amaldagi foydalani layotgan o'quv adabiyotlarida ajratilgan soat kamligi uchun kiritilmagan, lekin mutaxassislik fanlarini o'rganishda muhim ahamiyatga ega bo'lgan quyidagi mavzular bilan to'ldirilgan:

- Vektorlarning amaliy masalalarni yechishga qo'llanishi.
 - Bir jinsli tenglamalar sistemasini yechish.
 - Ikkinchchi tartibli egri chiziqlarning umumiyligi tenglamasini kanonik ko'rinishga keltirish.
 - Amaliy masalalarni yechishda funksiyaning eng katta va eng kichik qiymatlarini qo'llash.
 - Aniq integralning amaliy masalalarni yechishga tatbiqi.
- Ikkinchchi jild esa quyidagi mavzular bilan to'ldirilgan:
- Ikki o'Ichovli integralning fizikaga tatbiqlari.
 - Rikatti differential tenglamasi.
 - Eyler differential tenglamasi.
 - Differential tenglamalar sistemasini birinchi integral yordamida yechish.
 - O'zgarmas koeffitsiyentli chiziqli bir jinsli bo'lmagan differential tenglamalar sistemasini integrallash usullari.
 - Chegirmalarni integral hisoblashga qo'llash.
 - Birinchi tartibli xususiy hosilali differential tenglamalarni yechish.
 - Bir jinsli bo'lmagan to'lqin tarqalish va issiqlik tarqalish tenglamalariga doir masalalar yehish.
 - Elliptik tipdagagi tenglamaga Dirixle masalasini to'g'ri to'rtburchakda va halqada yechish.
 - O'zgarmas koeffitsiyentli chiziqli tenglamalar sistemasini va integral tenglamani Laplas tasviri yordamida yechish va boshqalar.

Birinchi jilda 1085 ta masala va misollar keltirilgan bo'lib, ulardan 153 tasini yechib ko'rsatilgan. Ikkinchchi jilda 1400 ta masala va misollar keltirilgan bo'lib, ulardan 386 tasini yechib ko'rsatilgan. Masala va misollar foydalani layotgan adabiyotlar ro'yxatida keltirilgan kitoblardan olingan yoki mualliflar tomonidan tuzilgan.

Darslikning 1-jildi B.I.Jamalov va A.M.To'xtabayev, 2-jildi Yu.P.Apakov tomonidan yozilgan.

Mualliflar darslik qo‘lyozmasini o‘qib, uning sifatini yanada oshirish borasidagi fikr va mulohazalari uchun Namangan muhandislik-qurilish instituti Oliy matematika kafedrasи professor-o‘qituvchilariga va Namangan davlat universiteti professori M.M.Raxmatullayevga hamda Toshkent shahridagi MMFI Milliy tatqiqotlar yadro universiteti Federal davlat avtanom oliy ta’lim muassasasi filiali o‘quv va tarbiyaviy ishlар bo‘yicha direktor o‘rribosari A.S. Sharipovga o‘z minnatdorliklarini bildiradilar.

Darslikning kamchiliklarini bartaraf etishga oid takliflами mualliflar mamnuniyat bilan qabul qiladilar.

Murojaat uchun, E-mail: yusupjonapakov@gmail.com

Mualliflar.

I BOB. KO'P O'ZGARUVCHILI FUNKSIYALAR

1-§. Ko'p o'zgaruvchili funksiyalar haqida umumiy tushuncha

Tabiatda, fan va texnikaning barcha sohalarida juda ko'p masalalar borki, o'zgaruvchi miqdorlar bog'lanishlarida bittasining sonli qiymati boshqa bir nechtasining qiymati bilan aniqlanadi. Masalan, tomonlarining uzunliklari x va y dan iborat bo'lgan to'g'ri to'rtburchakning yuzi, uning tomonlarining uzunliklari o'zgarishi bilan o'zgaradi; dehqonning hosili esa o'g'it berishga, sug'orishga, dehqonning malakasiga va boshqa juda ko'p faktorlarga bog'liq; sigirdan sog'ib olinayotgan sut miqdori, sigir zotiga, uning qanday yem-xashak bilan boqilishiga va hokazolarga bog'liq. Bunday misollarni istalgancha keltirish mumkin.

Bunday bog'lanishlarni tekshirish uchun ko'p o'zgaruvchili (argumentli) funksiyalar tushunchasini kiritamiz. Ko'p o'zgaruvchili funksiyalarni o'rganishda, asosan, ikki o'zgaruvchili funksiyalar bilan chegaralanamiz, chunki, ularning xossalari aynan takrorlanadi.

1. Ikki o'zgaruvchili funksiya, uning aniqlanish sohasi va grafigi

R^2 fazoda D va E to'plamlar berilgan bo'lsin.

1-ta'sif. Agar D to'plamning bir-biriga bog'liq bo'lmasagan x va y o'zgaruvchilari har bir (x, y) haqiqiy sonlari juftligiga biror qoida asosida E to'plamdagagi bitta z haqiqiy son mos qo'yilgan bo'lsa, D to'plamda ikki x va y o'zgaruvchilarning funksiysi z aniqlangan deyiladi.

Ikki o'zgaruvchili funksiya simvolik tarzda quyidagicha belgilanadi: $z = f(x, y)$, $z = F(x, y)$ (funksiya x yoki y bilan o'zgaruvchilar mos ravishda x_1 , yoki x_1, x_2 lar bilan belgilangan bo'lsa, $y = f(x, t)$ yoki $z = F(x_1, x_2)$ ko'rinishda ifodalanishi ham mumkin va h.k.). Bunda x, y o'zgaruvchilarga erkli o'zgaruvchilar

yoki argumentlar, z ga erksiz o'zgaruvchi yoki funksiya deb ataladi.

Uch o'zgaruvchili funksiya uchun bu ta'rif quyidagicha bayon etiladi:

2-ta'rif. R^3 fazoda biror V to'plamning bir-biriga bog'liq bo'limgan x, y va z o'zgaruvchilari har bir (x, y, z) haqiqiy sonlari uchligiga biror qoida asosida E to'plamdagি bitta ω haqiqiy son mos qo'yilgan bo'lsa, V to'plamda uch x, y va z o'zgaruvchilarning funksiyasi ω aniqlangan deyiladi.

Uch o'zgaruvchili funksiya simvolik tarzda quyidagicha belgilanadi: $\omega = f(x, y, z)$, $\omega = F(x, y, z)$.

Aynan shuning uchun ikki o'zgaruvchili funksiyani o'rGANISH bilan cheklanamiz.

D to'plamga **funksiyaning aniqlanish sohasi**, E to'plamga o'zgarish yoki qiymatlar sohasi deyiladi. Har bir juft haqiqiy songa biror tayin koordinatalar sistemasida bitta M nuqta va bitta nuqtaga bir juft haqiqiy son mos kelganligi uchun ikki argumentli funksiyani M nuqtaning funksiyasi ham deyiladi hamda $y = f(x_1, x_2)$ o'rniiga $y = f(M)$ deb yozish mumkin.

1. $z = \sqrt{4 - x^2 - y^2}$ funksiyaning aniqlanish sohasini toping.

Yechish. Funksiya aniqlangan bo'lishi uchun $4 - x^2 - y^2 \geq 0$ yoki $x^2 + y^2 \leq 4$ bo'lishi kerak, bunday nuqtalar to'plami markazi koordinatlar boshida, radiusi 2 ga teng bo'lgan doiradan iborat. Qiymatlar to'plami $[0, 2]$ bo'ladi.

2. $u = \frac{1}{\sqrt{x^2 + y^2 - 9}}$ funksiyaning aniqlanish sohasini toping.

Yechish. Funksiya $x^2 + y^2 - 9 > 0$, ya'ni markazi koordinatlar boshida radiusi 3 ga teng bo'lgan doiradan tashqarida aniqlangan. Qiymatlar to'plami $(0, \infty)$.

Ikki argumentli funksiyaning geometrik tasviri fazoda tenglamasi $z = f(x, y)$ bo'lgan sirtni ifodalaydi.

Masalan: 1) $z = 2x + 3y - 12$ ikki argumentli funksiya fazoda $2x + 3y - z - 12 = 0$ tekislikni tasvirlaydi. 2) $x^2 + y^2 + z^2 = R^2$ sfera tenglamasi

bo'lib, $z = \pm\sqrt{R^2 - x^2 - y^2}$ ikki argumentli funksiyalar grafiklari sferani ifodalaydi.

Uch va undan ko'p o'zgaruvchili funksiyalarning grafiklarini yasab bo'lmaydi, chunki, biz faqat uch o'lchovli olamnigina tasavvur qila olamiz xolos.

Ikki argumentli funksiyaning limiti va uzluksizligi

3-ta'rif. $z = f(x, y)$ funksiyaning $P_0(x_0, y_0)$ nuqtadagi limiti deb, ixtiyoriy $\varepsilon > 0$ son uchun shunday $\delta > 0$ son topilsaki, $\sqrt{(x-a)^2 + (y-b)^2} < \delta$ bo'lganda $|f(x, y) - A| < \varepsilon$ tengsizlik bajarilsa, a nuqta $f(x, y)$ funksiyaning $(x \rightarrow x_0, y \rightarrow y_0)$ $P_0(x_0, y_0)$ nuqtadagi limiti deyiladi va quyidagi ko'rinishda yoziladi.

$$\lim_{\substack{x \rightarrow x_0 \\ y \rightarrow y_0}} f(x, y) = A \quad (1)$$

4-ta'rif. $z = f(x, y)$ funksiyaning $P(a, b)$ nuqtada uzluksiz deyiladi, agarda

$$\lim_{\substack{x \rightarrow a \\ y \rightarrow b}} f(x, y) = f(P) = f(a, b)$$

tenglik o'rinni bo'lsa.

3. $\lim_{\substack{x \rightarrow 3 \\ y \rightarrow 1}} \frac{x+5y}{x-y}$ limitni hisoblang.

$$\text{Yechish. } \lim_{\substack{x \rightarrow 3 \\ y \rightarrow 1}} \frac{x+5y}{x-y} = \frac{3+5 \cdot 1}{3-1} = \frac{8}{2} = 4.$$

4. $z = \frac{xy+1}{x^2 - y}$ funksiyaning uzilish nuqtasini toping.

Yechish. Maxraj 0 ga aylansa funksiya ma'nosini yo'qotadi. Ya'ni $x^2 - y \neq 0$, bundan tekislikning $y = x^2$ parabolaga tegishli nuqtalari funksiyaning uzilish nuqtalari to'plami bo'ladi.

Quyidagi funksiyalarning aniqlanish sohasini toping

$$5. u = \sqrt{x^2 + y^2 - 1}.$$

$$6. u = \frac{1}{\sqrt{1-x^2-y^2}}.$$

$$7. u = \arcsin(x+y).$$

$$8. u = \sqrt{\cos(x^2 + y^2)}.$$

$$9. u = \ln(-x+y).$$

$$10. u = y + \sqrt{x}.$$

$$11*. u = \arcsin\left(\frac{z}{\sqrt{x^2 + y^2}}\right).$$

$$12*. u = \frac{1}{\ln(1-x^2-y^2-z^2)}.$$

Quyidagi funksiyalarning limitini hisoblang

$$13. \lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} (x^2 + y^2) \sin \frac{1}{xy}.$$

$$14. \lim_{\substack{x \rightarrow \infty \\ y \rightarrow \infty}} \frac{x+y}{x^2 + y^2}.$$

$$15. \lim_{\substack{x \rightarrow 0 \\ y \rightarrow 2}} \frac{\sin xy}{x}.$$

$$16. \lim_{\substack{x \rightarrow 0 \\ y \rightarrow 2}} \left(1 + \frac{y}{x}\right)^x.$$

$$17. \lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} \frac{x}{x+y}.$$

$$18. \lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} \frac{x^2 - y^2}{x^2 + y^2}.$$

$$19*. \lim_{\substack{x \rightarrow \infty \\ y \rightarrow \infty}} \left(1 - \frac{y}{x}\right)^x.$$

$$20*. \lim_{\substack{x \rightarrow \infty \\ y \rightarrow 2}} \left(1 + \frac{y}{x}\right)^{\frac{x}{3}}.$$

Quyidagi funksiyalarning uzilish nuqtalarini toping

$$21. z = \ln \sqrt{x^2 + y^2}.$$

$$22. z = \frac{1}{(x-y)^2}.$$

$$23. z = \frac{1}{1-x^2-y^2}.$$

$$24. z = \cos \frac{1}{xy}.$$

2-§. Ko‘p o‘zgaruvchili funksiyalarning to‘liq orttirmasi va xususiy hosilasi

5-ta’rif. $z = f(x, y)$ funksiyada x o‘zgaruvchiga biror Δx orttirma berib, y ni o‘zgarishsiz qoldirsak, funksiya Δz orttirma olib, bu orttirmaga z funksiyaning x o‘zgaruvchi bo‘yicha xususiy orttirmasi deyiladi va quyidagicha yoziladi:

$$\Delta_z = f(x + \Delta x, y) - f(x, y).$$

Xuddi shunday, y o‘zgaruvchiga Δy orttirma berib x o‘zgarishsiz qolsa, unga z funksiyaning y o‘zgaruvchi bo‘yicha xususiy orttirmasi deyiladi va quyidagicha yoziladi:

$$\Delta_z = f(x, y + \Delta y) - f(x, y).$$

6-ta’rif. x va y o‘zgaruvchilar mos ravishda Δx va Δy orttirmalar olsa, $z = f(x, y)$ funksiya

$$\Delta z = f(x + \Delta x, y + \Delta y) - f(x, y)$$

to‘liq orttirma oladi deyiladi.

7-ta'rif. a) $\lim_{\Delta x \rightarrow 0} \frac{\Delta_x z}{\Delta x} = \lim_{\Delta x \rightarrow 0} \frac{f(x + \Delta x, y) - f(x, y)}{\Delta x}$ chekli limit mavjud bo'lsa, unga $z = f(x, y)$ funksiyaning x o'zgaruvchi bo'yicha xususiy hosilasi deyiladi va $\frac{\partial z}{\partial x}$ yoki $z'_x = f'_x(x, y)$ bilan belgilanadi.

b) $\lim_{\Delta y \rightarrow 0} \frac{\Delta_y z}{\Delta y} = \lim_{\Delta y \rightarrow 0} \frac{f(x, y + \Delta y) - f(x, y)}{\Delta y}$ chekli limit mavjud bo'lsa, unga $z = f(x, y)$ funksiyaning y o'zgaruvchi bo'yicha xususiy hosilasi deyiladi va $\frac{\partial z}{\partial y}$ yoki $z'_y = f'_y(x, y)$ bilan belgilanadi.

$z = f(x, y)$ funksiyadan x bo'yicha xususiy hosila hisoblanganda y ni o'zgarmas deb, y bo'yicha xususiy hosila hisoblaganda esa x ni o'zgarmas deb qaraladi.

Istalgan chekli sondagi o'zgaruvchili funksiyalarning xususiy hosilalari ham yuqoridagidek aniqlanadi.

25. $z = x^2 + 2xy + 3y^2$ funksiyaning xususiy hosilalarini toping.

Yechish. Avval y ni o'zgarmas deb z'_y ni topamiz:

$$z'_y = (x^2 + 2xy + 3y^2)'_y = (x^2)'_y + (2xy)'_y + (3y^2)'_y = 2x + 6y.$$

Endi x ni o'zgarmas deb z'_x ni topamiz:

$$z'_x = (x^2 + 2xy + 3y^2)'_x = (x^2)'_x + (2xy)'_x + (3y^2)'_x = 2x + 2y.$$

26. $u = \frac{3x + 4y - z}{x^2 - y^3 + 2z}$ funksiyaning xususiy hosilalarini toping.

Yechish. Hosila olish qoidalari va formulalaridan foydalananib quyidagilarni topamiz:

$$u'_x = \left(\frac{3x + 4y - z}{x^2 - y^3 + 2z} \right)'_x = \frac{(3x + 4y - z)'(x^2 - y^3 + 2z) - (3x + 4y - z)(x^2 - y^3 + 2z)'_x}{(x^2 - y^3 + 2z)^2} =$$

$$= \frac{3(x^2 - y^3 + 2z) - 2x(3x + 4y - z)}{(x^2 - y^3 + 2z)^2} = \frac{-3x^3 - 8xy + 2xz + 6z - 3y^3}{(x^2 - y^3 + 2z)^2},$$

$$u'_y = \left(\frac{3x + 4y - z}{x^2 - y^3 + 2z} \right)'_y = \frac{4x^2 - 4y^3 + 8z - 9xy^2 - 12y^3 + 3y^2z}{(x^2 - y^3 + 2z)^2},$$

$$u'_z = \left(\frac{3x + 4y - z}{x^2 - y^3 + 2z} \right)'_z = \frac{-x^3 - 6x - 8y + y^3}{(x^2 - y^3 + 2z)^2}.$$

Quyidagi funksiyalarning xususiy hosilalarini toping

$$27. z = x^3 + y^3 - 3axy.$$

$$28. z = \frac{x-y}{x+y}.$$

$$29. z = \frac{y}{x}.$$

$$30. z = \sqrt{x^2 - y^2}.$$

$$31. z = \frac{x}{\sqrt{x^2 + y^2}}.$$

$$32. z = \ln(x + \sqrt{x^2 + y^2}).$$

$$33. z = \operatorname{arctg} \frac{y}{x}.$$

$$34. z = y'.$$

$$35. z = e^{\frac{\sin y}{x}}.$$

$$36. z = \arcsin \sqrt{\frac{x^2 - y^2}{x^2 + y^2}}.$$

$$37. z = \ln \sin \frac{x+a}{\sqrt{y}}.$$

$$38. u = (xy)^z.$$

$$39*. u = z^{xy}.$$

$$40**. u = e^{xy^2} \sin \frac{y}{x}.$$

$$41*. u = x + \frac{x-y}{x+y} \text{ bo'lsa, } \frac{\partial u}{\partial x} + \frac{\partial u}{\partial y} + \frac{\partial u}{\partial z} = 1 \text{ ekanini ko'rsating.}$$

**3-§. Ko'p o'zgaruvchili funksiyalarning to'la differensiali.
Yuqori tartibli xususiy hosilalar va differensiallar**

1. To'la differensial. Ma'lumki, x va y o'zgaruvchilar mos ravishda Δx va Δy orttirmalar olsa, $z = f(x, y)$ funksiya $\Delta z = f(x + \Delta x, y + \Delta y) - f(x, y)$ to'la orttirma oladi. Bu to'la orttirmaning Δx va Δy larga nisbatan chiziqli bo'lgan bosh qismi funksiyaning to'la differensiali deyiladi va dz bilan belgilanadi. $z = f(x, y)$ funksiyaning to'la differensiali

$$dz = \frac{\partial z}{\partial x} dx + \frac{\partial z}{\partial y} dy \quad (2)$$

formula bilan hisoblanadi, bu yerda $dx = \Delta x$, $dy = \Delta y$ to'la differensial dan funksiyaning taqrifiy qiymatlarini hisoblashda foydalanish mumkin yoki

$$f(x_0 + \Delta x, y_0 + \Delta y) \approx f(x_0, y_0) + z'_x dx + z'_y dy.$$

Bundan

$$f(x_0 + \Delta x, y_0 + \Delta y) \approx f(x_0, y_0) + \frac{\partial z}{\partial x} dx + \frac{\partial z}{\partial y} dy. \quad (3)$$

Uch argumentli $u = F(x, y, z)$ funksiyaning to'la differensiali

$$du = \frac{\partial F}{\partial x} dx + \frac{\partial F}{\partial y} dy + \frac{\partial F}{\partial z} dz \quad (4)$$

formula bilan hisoblanadi.

42. $z = \ln(x^2 + y^2)$ funksiyaning to'la differensialini toping.

Yechish. Xususiy hosilalarni topamiz:

$$\frac{\partial z}{\partial x} = \frac{1}{x^2 + y^2} \cdot 2x = \frac{2x}{x^2 + y^2}, \quad \frac{\partial z}{\partial y} = \frac{1}{x^2 + y^2} \cdot 2y = \frac{2y}{x^2 + y^2}.$$

Shunday qilib (2) formulaga asosan funksiyaning to'la differensialini topamiz:

$$dz = \frac{2x dx}{x^2 + y^2} + \frac{2y dy}{x^2 + y^2} = \frac{2}{x^2 + y^2} (xdx + ydy).$$

43. $u = x^2yz^2$ funksiyaning to'la differensialini toping.

Yechish. Xususiy hosilalarni topamiz:

$$\frac{\partial u}{\partial x} = (x^2yz^2)'_x = yz^2(x^2)'_x = 2xyz^2, \quad \frac{\partial u}{\partial y} = (x^2yz^2)'_y = x^2z^2(y)'_y = x^2z^2,$$

$$\frac{\partial u}{\partial z} = (x^2yz^2)'_z = yx^2(z^2)'_z = 2x^2yz.$$

(4) formulaga asosan, $du = 2xyz^2dx + x^2z^2dy + 2x^2yzdz$ bo'ladi.

44. $z = \sqrt{\sin^2 x + 8e^y}$ funksiyaning $x_0 = \frac{\pi}{2} \approx 1,571$, $y_0 = 0$ dagi

qiymati yordamida $\sqrt{\sin^2 1,55 + 8e^{0,015}}$ ning taqrifiy qiymatini hisoblang.

Yechish. $\Delta x = 1,571 - 1,55 = 0,021$, $\Delta y = 0,015 - 0 = 0,015$. z funksiyaning $x_0 = \frac{\pi}{2}$, $y_0 = 0$ dagi qiymatini topamiz

$$z_0 = \sqrt{\sin^2\left(\frac{\pi}{2}\right) + 8e^0} = \sqrt{1+8} = 3.$$

$$f(x_0 + \Delta x, y_0 + \Delta y) \approx f(x_0, y_0) + \frac{\partial z}{\partial x} dx + \frac{\partial z}{\partial y} dy \approx$$

$$\approx 3 + \frac{\sin 2x \cdot \Delta x + 8e^y \Delta y}{2\sqrt{\sin^2 x + 8e^y}} \approx 3 + \frac{8 \cdot 0,015}{6} \approx 3,02.$$

1. Yuqori tartibli xususiy hosilalar va differensiallar

$z = f(x, y)$ funksiyaning ikkinchi tartibli xususiy hosilalari deb, birinchi tartibli xususiy hosilalardan olingan xususiy hosilalarga aytildi. Ikkinchi tartibli xususiy hosilalar quyidagicha belgilanadi:

$$\begin{aligned}\frac{\partial}{\partial x} \left(\frac{\partial z}{\partial x} \right) &= \frac{\partial^2 z}{\partial x^2} = z''_x = f''_{xx}(x, y), & \frac{\partial}{\partial y} \left(\frac{\partial z}{\partial x} \right) &= \frac{\partial^2 z}{\partial x \partial y} = z''_{xy} = f''_{xy}(x, y), \\ \frac{\partial}{\partial x} \left(\frac{\partial z}{\partial y} \right) &= \frac{\partial^2 z}{\partial y \partial x} = z''_{yx} = f''_{yx}(x, y), & \frac{\partial}{\partial y} \left(\frac{\partial z}{\partial y} \right) &= \frac{\partial^2 z}{\partial y^2} = z''_{yy} = f''_{yy}(x, y).\end{aligned}\quad (5)$$

$f''_{xy}(x, y)$ va $f''_{yx}(x, y)$ xususiy hosilalar aralash xususiy hosilalar deyiladi. Aralash xususiy hosilalar funksiyaning uzlucksiz bo'lgan nuqtalarida ular o'zaro teng bo'ladi.

Uchinchi va undan yuqori tartibli xususiy hosilalar ham yuqoridagidek aniqlanadi.

45. $z = x^4 + 4x^2y^3 - 3xy + 5x - 6y$ ikkinchi tartibli xususiy hosilalarni toping.

Yechish. Birinchi tartibli xususiy hosilalarni topamiz:

$$\begin{aligned}\frac{\partial z}{\partial x} &= (x^4 + 4x^2y^3 - 3xy + 5x - 6y)'_x = 4x^3 + 8xy^3 - 3y + 5, \\ \frac{\partial z}{\partial y} &= (x^4 + 4x^2y^3 - 3xy + 5x - 6y)'_y = 12x^2y^2 - 3x - 6.\end{aligned}$$

Topilgan hosilalardan yana xususiy hosilalar olamiz:

$$\begin{aligned}\frac{\partial}{\partial x} \left(\frac{\partial z}{\partial x} \right) &= \frac{\partial^2 z}{\partial x^2} = (4x^3 + 8xy^3 - 3y + 5)'_x = 12x^2 + 8y^3, \\ \frac{\partial}{\partial y} \left(\frac{\partial z}{\partial x} \right) &= (4x^3 + 8xy^3 - 3y + 5)'_y = 24xy^2 - 3, \\ \frac{\partial}{\partial x} \left(\frac{\partial z}{\partial y} \right) &= \frac{\partial^2 z}{\partial x \partial y} = (12x^2y^2 - 3x - 6)'_x = 24xy^2 - 3, \\ \frac{\partial}{\partial y} \left(\frac{\partial z}{\partial y} \right) &= \frac{\partial^2 z}{\partial y^2} = (12x^2y^2 - 3x - 6)'_y = 24x^2y.\end{aligned}$$

Ikkinchi tartibli to'la differensial $d(dz) = d^2z$ kabi belgilanib, xususiy hosilalar orqali quyidagicha topiladi.

$$d^2z = \frac{\partial^2 z}{\partial x^2} dx^2 + 2 \frac{\partial^2 z}{\partial x \partial y} dxdy + \frac{\partial^2 z}{\partial y^2} dy^2 \quad (6)$$

46. $z = x^3y^2$ funksiyaning ikkinchi tartibli to'la differensialini toping.

Yechish. Xususiy hosilalarni topamiz:

$$z'_x = (x^3 y^2)'_x = 3x^2 y^2, \quad z'_y = (x^3 y^2)'_y = 2x^3 y, \quad z''_{xx} = (3x^2 y^2)'_x = 6xy^2,$$

$$z''_{yy} = z''_{xy} = (3x^2 y^2)'_y = 6x^2 y, \quad z''_{yx} = (2x^3 y)'_y = 2x^3,$$

formulaga asosan ikkinchi tartibli to'la differensial quyidagicha yoziladi:

$$d^2z = 6xy^2 dx^2 + 12x^2 y dxdy + 2x^3 dy^2.$$

Quyidagi funksiyalarining to'la diferensialini toping

$$47. z = \ln(x^2 + y^2).$$

$$48. z = \operatorname{Intg}\left(\frac{y}{x}\right).$$

$$49. z = \sin(x^2 + y^2).$$

$$50. z = x^y.$$

$$51. z = \ln\left(x + \sqrt{x^2 + y^2}\right).$$

$$52. z = e^x (\cos y + x \sin y).$$

$$53. z = e^{x+y} (x \cos y + y \sin x).$$

$$54*. z = \operatorname{arctg} \frac{2(x + \sin y)}{4 - x \sin y}.$$

$$55*. u = e^{xy}.$$

56. $z = \sqrt{x^2 + y^2}$ funksiyaning $x_0 = 1, y_0 = 0$ dagi qiymati yordamida $z = \sqrt{1,02^2 + 0,05^2}$ ning taqrifiy qiymatini hisoblang.

57*. $u = \sqrt{x^2 + \ln z}$ funksiyaning $x_0 = 1, y_0 = 2, z_0 = 1$ dagi qiymati yordamida $u = \sqrt{1,04^{100} + \ln 1,02}$ ning taqrifiy qiymatini hisoblang.

$$58. u = 4x^2 + 3x^2 y + 3xy^2 - y^2, \quad \frac{\partial^2 u}{\partial x \partial y} = ?$$

$$59. u = xy + \sin(x + y), \quad \frac{\partial^2 u}{\partial x \partial y} = ?$$

$$60. u = \operatorname{Intg}(x + y), \quad \frac{\partial^2 u}{\partial x \partial y} = ?$$

$$61*. z = \operatorname{arctg} \frac{x + y}{1 - xy}, \quad \frac{\partial^2 z}{\partial x \partial y} = ?$$

4-§. Murakkab va oshkormas funksiyalarining xususiy hosilalari

1. $z = f(x, y)$ funksiya x va y o'zgaruvchilar bo'yicha differensiallanuvchi bolsa, $x = \varphi(t)$, $y = \psi(t)$ funksiyalar ham o'zgaruvchi bo'yicha differensiallanuvchi bolsa, $z = f[\varphi(t), \psi(t)]$

murakkab funksiyaning t o'zgaruvchi bo'yicha differensiali quyidagi formula bilan hisoblanadi:

$$\frac{dz}{dt} = \frac{\partial z}{\partial x} \frac{dx}{dt} + \frac{\partial z}{\partial y} \frac{dy}{dt}. \quad (7)$$

Agar t o'zgaruvchi x yoki y o'zgaruvchilarning biri bilan mos kelsa,

$$\frac{dz}{dx} = \frac{\partial z}{\partial x} + \frac{\partial z}{\partial y} \frac{dy}{dx}, \quad \frac{dz}{dy} = \frac{\partial z}{\partial x} \frac{dx}{dy} + \frac{\partial z}{\partial y}, \quad (8)$$

bo'ladi.

62. $z = e^{3x+2y}$ funksiyada, $x = \cos t$, $y = t^2$ bo'lsa $\frac{\partial z}{\partial t}$ toping.

Yechish. (7) formulaga asosan:

$$z'_x = \left(e^{3x+2y} \right)'_x = 3e^{3x+2y}, \quad z'_y = \left(e^{3x+2y} \right)'_y = 2e^{3x+2y},$$

$$x'_t = (\cos t)'_t = -\sin t, \quad y'_t = (t^2)'_t = 2t.$$

$$\begin{aligned} \frac{\partial z}{\partial t} &= \frac{\partial z}{\partial x} \frac{\partial x}{\partial t} + \frac{\partial z}{\partial y} \frac{\partial y}{\partial t} = e^{3x+2y} \cdot 3(-\sin t) + e^{3x+2y} \cdot 2 \cdot 2t = \\ &= e^{3x+2y} (4t - 3\sin t) = e^{3\cos t + 2t^2} (4t - 3\sin t). \end{aligned}$$

$z = f(x, y)$ x va y o'zgaruvchilar bo'yicha differensiallanuvchi bo'lsa, $x = \varphi(u, v)$, $y = \psi(u, v)$ funksiyalar ham u va v o'zgaruvchilar bo'yicha differensiallanuvchi bo'lsa, u holda u va v bo'yicha differensial quyidagi formula bilan hisoblanadi :

$$\frac{dz}{du} = \frac{\partial z}{\partial x} \frac{\partial x}{\partial u} + \frac{\partial z}{\partial y} \frac{\partial y}{\partial u}, \quad \frac{dz}{dv} = \frac{\partial z}{\partial x} \frac{\partial x}{\partial v} + \frac{\partial z}{\partial y} \frac{\partial y}{\partial v}. \quad (9)$$

2.Ushbu ko'rinishdagi funksiyalar oshkormas funksiyalar deb ataladi.

$$F(x, y) = 0; \quad F(x, y, z) = 0.$$

Oshkormas funksiyaning xususiy hosilalari quyidagi formula bilan hisoblanadi.

$$\frac{\partial y}{\partial x} = -\frac{\frac{\partial F}{\partial x}}{\frac{\partial F}{\partial y}}; \quad \frac{\partial z}{\partial x} = -\frac{\frac{\partial F}{\partial x}}{\frac{\partial F}{\partial z}}; \quad \frac{\partial z}{\partial y} = -\frac{\frac{\partial F}{\partial y}}{\frac{\partial F}{\partial z}}. \quad (10)$$

63. $z = x^2 + xy + y^2$; $x = t^2$; $y = t$; $\frac{\partial z}{\partial t}$ ni hisoblang.

Yechish. (7) formulaga asosan;

$$\frac{\partial z}{\partial x} = 2x + y; \quad \frac{dx}{dt} = 2t; \quad \frac{\partial z}{\partial y} = x + 2y; \quad \frac{dy}{dt} = 1;$$

$$\frac{dz}{dt} = (2x + y) \cdot 2t + (x + 2y) \cdot 1 = (2 \cdot t^2 + t) \cdot 2t + (t^2 + 2t) = 4t^3 + 2t^2 + t^2 + 2t = 4t^3 + 3t^2 + 2t.$$

64. $\frac{x^2}{a^2} + \frac{y^2}{b^2} + \frac{z^2}{c^2} = 1$ funksiya berilgan. $\frac{\partial z}{\partial x} = ?$; $\frac{\partial z}{\partial y} = ?$.

Yechish. $F(x, y, z) = \frac{x^2}{a^2} + \frac{y^2}{b^2} + \frac{z^2}{c^2} - 1$ bo‘lganidan (10) formulaga asosan:

$$\begin{aligned}\frac{\partial F}{\partial x} &= \frac{2x}{a^2}; \quad \frac{\partial F}{\partial y} = \frac{2y}{b^2}; \quad \frac{\partial F}{\partial z} = \frac{2z}{c^2}; \\ \frac{\partial z}{\partial x} &= -\frac{2x/a^2}{2z/c^2} = \frac{-c^2 x}{a^2 z}; \quad \frac{\partial z}{\partial y} = -\frac{2y/b^2}{2z/c^2} = \frac{-c^2 y}{b^2 z}.\end{aligned}$$

Quyidagi murakkab funksiyalarning xususiy hosilasini toping

65. $z = \frac{1}{2} \ln \frac{u}{v}, \quad u = tg^2 x, \quad v = ctg^2 x$ bo‘lsa, $\frac{dz}{dx}$ topilsin.

66. $z = \frac{x^2 - y}{x^2 + y}, \quad y = 3x + 1$ bo‘lsa, $\frac{dz}{dx}$ topilsin.

67. $z = x^2 y, \quad y = \cos x$ bo‘lsa, $\frac{\partial z}{\partial x}$ va $\frac{dz}{dx}$ topilsin.

68. $z = \ln \frac{x - \sqrt{x^2 - y^2}}{x + \sqrt{x^2 - y^2}}, \quad y = x \cos \alpha$ bo‘lsa, $\frac{dz}{dx}$ topilsin.

69. $z = x^2 + y^2, \quad x = \xi + \eta, \quad y = \xi - \eta$ bo‘lsa, $\frac{\partial z}{\partial \xi}$ va $\frac{\partial z}{\partial \eta}$ topilsin.

70*. $u = \ln(x^2 + y^2), \quad x = \xi \eta, \quad y = \frac{\xi}{\eta}$ bo‘lsa, $\frac{\partial u}{\partial \xi}$ va $\frac{\partial u}{\partial \eta}$ topilsin.

71*. $u = \ln\left(\frac{1}{r}\right), \quad r = \sqrt{(x-a)^2 + (y-b)^2}$ bo‘lsa, $\frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0$ ekanini ko‘rsating.

Quyidagi oshkornas funksiyalarning hosilasini toping

72. $x^2 + y^2 - 4x + 6y = 0. \quad 73. x^{2/3} + y^{2/3} = a^{2/3}.$

74. $xe^{2y} - ye^{2x} = 0. \quad 75. Ax^2 + 2Bxy + Cy^2 + 2Dx + 2Ey + F = 0.$

Quyidagi oshkormas funksiyalarning hosilasini toping

76. $x^2 + y^2 + z^2 - 6x = 0. \quad \frac{\partial z}{\partial x} = ?, \quad \frac{\partial y}{\partial x} = ?.$

77. $z^2 = xy.$

78*. $\cos(ax + by - cz) = k(ax + by - cz).$

5-§. Sirtga o'tkazilgan urinma tekislik va normal tenglamalari. Ko'p o'zgaruvchili funksiyaning ekstremumlari

Sirtga $M_0(x_0, y_0, z_0)$ nuqtada o'tkazilgan **urinma tekislik** deb, sirtga bu nuqtasi orqali o'tgan barcha egri chiziqlarga o'tkazilgan urinmalar joylashgan tekislikka aytildi. Bu nuqtadagi urinma tekislikka perpendikular bo'lgan to'g'ri chiziq sirtiga, shu nuqtada **o'tkazilgan normal** deb ataladi.

$z = f(x, y)$ funksiya bilan berilgan sirtga $M_0(x_0, y_0, z_0)$ nuqtada o'tkazilgan urinma tekislik tenglamasi, quyidagi formula bilan topiladi:

$$z - z_0 = f'_x(x_0, y_0)(x - x_0) + f'_y(x_0, y_0)(y - y_0). \quad (11)$$

$z = f(x, y)$ tenglama bilan berilgan sirtga $M_0(x_0, y_0, z_0)$ nuqtada o'tkazilgan normal tenglamasi, quyidagi formula bilan topiladi:

$$\frac{x - x_0}{f'_x(x_0, y_0)} = \frac{y - y_0}{f'_y(x_0, y_0)} = \frac{z - z_0}{-1}. \quad (12)$$

$F(x, y, z) = 0$ tenglama bilan berilgan sirtga $M_0(x_0, y_0, z_0)$ nuqtada o'tkazilgan urinma tekislik tenglamasi, quyidagi formula bilan topiladi:

$$F'_x(x_0, y_0, z_0)(x - x_0) + F'_y(x_0, y_0, z_0)(y - y_0) + F'_z(x_0, y_0, z_0)(z - z_0) = 0. \quad (13)$$

$F(x, y, z) = 0$ tenglama bilan berilgan sirtga $M_0(x_0, y_0, z_0)$ nuqtada o'tkazilgan normal tenglamasi, quyidagi formula bilan topiladi:

$$\frac{x - x_0}{F'_x(x_0, y_0, z_0)} = \frac{y - y_0}{F'_y(x_0, y_0, z_0)} = \frac{z - z_0}{F'_z(x_0, y_0, z_0)}. \quad (14)$$

$P_0(x_0, y_0)$ nuqta $z = F(x, y)$ funksiyaning ekstremum nuqtasi bo'lsa, bu nuqtada $\frac{\partial F(x_0, y_0)}{\partial x} = 0$ va $\frac{\partial F(x_0, y_0)}{\partial y} = 0$ bo'ladi yoki ulardan hech bo'lmasa bittasi mavjud bo'lmaydi. Bunday nuqtalar **kritik nuqtalar** deyiladi.

Izoh. $z = F(x, y)$ funksiya $P_0(x_0, y_0)$ nuqtada uzlusiz bo'lib, differensialanuvchi bo'lmasa ham ekstremumga erishishi mumkin. Masalan, $0(0; 0)$ nuqtada uzlusiz $z = \sqrt{x^2 + y^2}$ funksiya bu

nuqtada differensiallanuvchi emas, ammo $0(0;0)$ - nuqta bu funksiya uchun minimum nuqta bo'ldi.

Yetarli shartlar. $\frac{\partial^2 F}{\partial x^2} = A$, $\frac{\partial^2 F}{\partial x \partial y} = B$ va $\frac{\partial^2 F}{\partial y^2} = C$ orqali belgilaymiz.

$\Delta = AC - B^2 > 0$ bo'lsa ekstremum mavjud bo'lib;

$A > 0$ bo'lsa, minimum nuqta bo'ldi.

$A < 0$ bo'lsa, maksimum nuqta bo'ldi.

$\Delta < 0$ bo'lsa, ekstremum nuqta bo'lmaydi.

$\Delta = 0$ bo'lsa, u holda ekstremum bo'lishi ham, bo'lmasligi ham mumkin.

79. $z = 9 - x^2 - y^2$ elliptik paraboloidga $M_0(1;2;4)$ nuqtada o'tkazilgan urinma tekislik va normalning tenglamasini tuzing.

Yechish. $z = 9 - x^2 - y^2$ funksiyaning hosilasining $M_0(1;2;4)$ nuqtadagi qiymatlarini hisoblaymiz:

$$f'_x(x,y) = -2x, \quad f'_x(1,2) = -2; \quad f'_y(x,y) = -2y, \quad f'_y(1,2) = -4;$$

Topilganlarni (11) va (12) formulalarga qo'yib, urinma tekislik va normal tenglamalarini topamiz:

$$z - 4 = -2(x-1) - 4(y-2) \Rightarrow 2x + 4y + z - 14 = 0.$$

$$\frac{x-1}{2} = \frac{y-2}{4} = \frac{z-4}{1}.$$

80. $x^2 + 3y^2 - 2z^2 = 4$ giperbolaga $M_0(-3;-1;2)$ nuqtada o'tkazilgan urinma tekislik va normal tenglamalarini tuzing.

Yechish. $F(x,y,z) = x^2 + 3y^2 - 2z^2 - 4 = 0$ deb olsak, quyidagilarni hosil qilamiz:

$$F'_x(x,y,z) = (x^2 + 3y^2 - 2z^2 - 4)'_x = 2x, \quad F'_x(-3,-1,2) = -6,$$

$$F'_y(x,y,z) = (x^2 + 3y^2 - 2z^2 - 4)'_y = 6y, \quad F'_y(-3,-1,2) = -6,$$

$$F'_z(x,y,z) = (x^2 + 3y^2 - 2z^2 - 4)'_z = -4z, \quad F'_z(-3,-1,2) = -8.$$

Topilganlarni (13) va (14) formulalarga qo'yib, urinma tekislik va normal tenglamalarini topamiz:

$$-6(x+3) - 6(y+1) - 8(z-2) = 0 \Rightarrow 3x + 3y + 4z + 4 = 0.$$

$$\frac{x+3}{3} = \frac{y+1}{3} = \frac{z-2}{4}.$$

81. $z = x^2 - xy + y^2 + 9x - 6y + 20$ funksiyaning ekstremumini toping.

$$\text{Yechish. } \frac{\partial z}{\partial x} = 2x - y + 9 \quad \frac{\partial z}{\partial y} = -x + 2y - 6$$

$$\begin{cases} \frac{\partial z}{\partial x} = 0 \\ \frac{\partial z}{\partial y} = 0 \end{cases} \begin{cases} 2x - y + 9 = 0 \\ -x + 2y - 6 = 0 \end{cases} \Rightarrow \begin{cases} 2x - y = -9 \\ -x + 2y = 6 \end{cases} \Rightarrow \begin{cases} 2x - y = -9 \\ 3y = 3 \end{cases} \begin{matrix} y = 1, \\ x = -4 \end{matrix}$$

$$\frac{\partial^2 z}{\partial x^2} = 2 \quad \frac{\partial^2 z}{\partial y^2} = 2 \quad \frac{\partial^2 z}{\partial x \partial y} = -1$$

$$A = 2 \quad B = -1 \quad C = 2$$

$$\Delta = AC - B^2 = 4 - 1 = 3 > 0$$

$\Delta > 0$ demak, ekstremum mavjud. $A > 0$ bo‘lgani uchun minimum nuqta.

$$z_{\min}(x = -4, y = 1) = 16 + 4 + 1 - 36 - 6 + 20 = -1. \text{ Demak } z_{\min} = -1.$$

82. Berilgan sirtga $M_0(x_0; y_0; z_0)$ nuqtada o’tkazilgan urinma va normal tekisliklar tenglamalarini tuzing.

$$1) z = x^2 - 2y^2, M_0(2; 1; 2), \quad 2) z = 3x^2 - xy + x + y, M_0(1; 3; 4),$$

$$3) x^2 + y^2 + z^2 - 14 = 0, M_0(-1; 3; -2), \quad 4) x^3 + y^3 + z^3 + xyz = 6, M_0(1; 2; -1).$$

Quyidagi funksiyalarning ekstremumlarini toping

$$83. 1) z = x^2 - xy + y^2 + 9x - 6y + 20. \quad 2) z = y\sqrt{x} - y^2 - x + 6y.$$

$$84. z = x^3 + 8y^3 - 6xy + 1.$$

$$85. z = 2xy - 4x - 2y.$$

$$86. z = e^{y/2} (x + y^2).$$

$$87. z = \sin x + \sin y + \sin(x + y), \quad 0 \leq x, y \leq \frac{\pi}{2}.$$

$$88. z = \frac{1}{x} + \frac{1}{y}, \quad x + y = 2 \text{ bo‘lganda.}$$

$$89*. z = x + y, \quad \frac{1}{x^2} + \frac{1}{y^2} = \frac{1}{2} \text{ bo‘lganda.}$$

II BOB. KARRALI VA EGRI CHIZIQLI INTEGRALLAR

6-§. Ikki o'lchovli integrallar

$f(x,y)$ funksiya D yopiq soha bilan chegaralangan xoy tekislikda aniqlangan bo'lsin. D sohani n ta bo'lakka ajratamiz va diametrlari $d_1, d_1, d_1, \dots, d_n$ ga teng $\Delta\delta_1, \Delta\delta_2, \dots, \Delta\delta_n$ elementar sohalarga ajratamiz. Har bir elementar sohadan $P_k(\xi_k, \eta_k)$ nuqtalar olib integral yig'indini hosil qilamiz:

$$\sum_{k=1}^n f_k(\xi_k, \eta_k) \Delta\delta_k.$$

Quyidagi limit $f(x,y)$ dan olingan ikki o'lchovli integral deyiladi:

$$\lim_{\max \Delta\delta_k \rightarrow 0} \sum_{k=1}^n f_k(\xi_k, \eta_k) \Delta\delta_k = \iint_D f(x,y) dx dy.$$

1. Ikki karrali integralning xossalari.

$f(x,y)$ funksiya D sohada berilgan va uzluksiz bo'lsin.

1°. Agar $D = D_1 \cup D_2$ bo'lsa, u holda quyidagi formula o'rinni:

$$\iint_D f(x,y) dx dy = \iint_{D_1} f(x,y) dx dy + \iint_{D_2} f(x,y) dx dy.$$

$$2°. \iint_D k f(x,y) dx dy = k \iint_D f(x,y) dx dy.$$

3°. Agar $f(x,y)$ va $g(x,y)$ D sohada uzluksiz bo'lsa, u holda quyidagi formula o'rinni:

$$\iint_D (f(x,y) \pm g(x,y)) dx dy = \iint_D f(x,y) dx dy \pm \iint_D g(x,y) dx dy.$$

$$4°. \text{Agar } D \text{ sohada } f(x,y) \geq 0 \text{ bo'lsa, u holda } \iint_D f(x,y) dx dy \geq 0$$

bo'ladi.

5°. Agar D sohada $f(x,y) \geq g(x,y)$ bo'lsa, u holda quyidagi formula o'rinni:

$$\iint_D f(x,y) dx dy \geq \iint_D g(x,y) dx dy$$

2. Ikki karrali integrallarni hisoblash.

1) Agar $f(x,y)$ funksiya $D = \{(x,y) : a \leq x \leq b, \varphi_1(x) \leq y \leq \varphi_2(x)\}$ (bunda $\varphi_1(x)$ va $\varphi_2(x)$ egri chiziqlar a va b vertikal chiziqlar bilan faqat bir nuqtada kesishadi) sohada integrallanuvchi bo'lsa, u holda ikki karrali integral quyidagicha hisoblanadi:

$$\iint_D f(x,y) dx dy = \int_a^b \left[\int_{\varphi_1(x)}^{\varphi_2(x)} f(x,y) dy \right] dx.$$

2) Agar $f(x,y)$ funksiya $D = \{(x,y) : \psi_1(y) \leq x \leq \psi_2(y), c \leq y \leq d\}$ (bunda $\psi_1(y)$ va $\psi_2(y)$ egri chiziqlar c va d gorizontal chiziqlar bilan faqat bir nuqtada kesishadi) sohada integrallanuvchi bo'lsa, u holda ikki karrali integral quyidagicha hisoblanadi:

$$\iint_D f(x,y) dx dy = \int_c^d \left[\int_{\psi_1(y)}^{\psi_2(y)} f(x,y) dx \right] dy.$$

3) Agar $f(x,y)$ funksiya $D = \{(x,y) : a \leq x \leq b, c \leq y \leq d\}$ to'g'ri to'rtburchakda berilgan va uzlusiz bo'lsa, ikki karrali integral quyidagicha hisoblanadi:

$$\iint_D f(x,y) dx dy = \int_a^b \left[\int_c^d f(x,y) dy \right] dx = \int_c^d \left[\int_a^b f(x,y) dx \right] dy.$$

90. $f(x,y) = 1, D = \{(x,y) : -2 \leq x \leq 1, x \leq y \leq 2-x^2\}$ bo'lsa, ikki karrali integralni hisoblang.

Yechish.
$$\begin{aligned} \iint_D f(x,y) dx dy &= \int_{-2}^1 \left[\int_x^{2-x^2} 1 \cdot dy \right] dx = \int_{-2}^1 (2-x^2-x) dx = \\ &= \left(2x - \frac{x^3}{3} - \frac{x^2}{2} \right) \Big|_{-2}^1 = 2(1+2) - \frac{1+8}{3} - \frac{1-4}{2} = 6 - 3 + 1,5 = 4,5 \end{aligned}$$

91. $f(x,y) = x+2y, D : y=x, y=2x, x=2, x=3$ chiziqlar bilan chegaralangan bo'lsa ikki karrali integralni hisoblang.

Yechish.
$$\begin{aligned} \iint_D (x+2y) dx dy &= \int_2^3 dx \int_x^{2x} (x+2y) dy = \int_2^3 (xy + y^2) \Big|_{y=x}^{y=2x} = \\ &= \int_2^3 (2x^2 + 4x^2 - x^2 - x^2) dx = 4 \int_2^3 x^2 dx = \frac{4}{3} x^3 \Big|_2^3 = 25 \frac{1}{3}. \end{aligned}$$

92. $\int_{-1}^1 dx \int_{-\sqrt{1-x^2}}^{1-x^2} f(x,y) dy$ integrallash tartibini o'zgartiring.

Yechish. $x_1 = -1$, $x_2 = 1$, $y_1 = -\sqrt{1-x^2}$, $y_2 = \sqrt{1-x^2}$ chiziqlar bilan chegaralangan. Bu yerda D soha ikkita sohaga ajraydi:

$D_1: x_1 = \pm\sqrt{1-y^2}$, $-1 \leq y_1 \leq 0$ $D_2: x_2 = \pm\sqrt{1-y^2}$, $0 \leq y_2 \leq 1$,
u holda integral

$$\int_{-1}^1 dx \int_{-\sqrt{1-x^2}}^{\sqrt{1-x^2}} f(x, y) dy = \int_0^1 dy \int_{-\sqrt{1-y^2}}^{\sqrt{1-y^2}} f(x, y) dx + \int_0^1 dy \int_{-\sqrt{1-y^2}}^{\sqrt{1-y^2}} f(x, y) dx.$$

Quyidagi ikki karrali integrallarni hisoblang

$$93. \int_0^2 dy \int_0^1 (x^2 + 2y) dx.$$

$$94. \int_3^4 dx \int_1^2 \frac{dy}{(x+y)^2}.$$

$$95. \int_0^1 dx \int_0^1 \frac{x^2 dy}{1+y^2}.$$

$$96. \int_1^2 dx \int_{y/2}^{x^2} \frac{x^2}{y^2} dy.$$

$$97. \int_{-3}^3 dy \int_{y^2-4}^5 (x+2y) dx.$$

$$98. \int_0^{2\pi} d\varphi \int_0^a r dr.$$

$$99. \int_{-\pi/2}^{\pi/2} d\varphi \int_0^{3\cos\varphi} r^2 \sin^2 \varphi dr.$$

$$100*. \int_0^1 dx \int_0^{\sqrt{1-x^2}} \sqrt{1-x^2-y^2} dy.$$

Quyidagi ikki karrali integrallarni integrallash tartibini almashtiring

$$101. \int_0^4 dx \int_{3x^2}^{12x} f(x, y) dy.$$

$$102. \int_0^1 dx \int_{2x}^{3x} f(x, y) dy.$$

$$103*. \int_0^a dx \int_{(a^2-x^2)/2a}^{\sqrt{a^2-x^2}} f(x, y) dy.$$

$$104**. \int_a^{2a} dx \int_{\sqrt{2ax-x^2}}^{\sqrt{4ax}} f(x, y) dy.$$

7-§. Ikki karrali integralda o'zgaruvchilarni almashtirib integrallash, qutb koordinatalar sistemasida ikki karrali integrallarni hisoblash

Ikki karrali integralni hisoblashda integrallanayotgan sohadan tashqari integrallanuvchi funksiya ham muhim o'rinn tutadi. Integralni hisoblashda Dekart koordinatalar sistemasidan qutb koordinatalar sistemasiga o'tib hisoblash $x = \rho \cos \theta$, $y = \rho \sin \theta$ almashtirish yordamida bajariladi:

$$\iint_D f(x, y) dx dy = \iint_D f(\rho \cos \theta, \rho \sin \theta) \rho d\rho d\theta. \quad (1)$$

Agar $\alpha \leq \theta \leq \beta$, $\rho_1(\theta) \leq \rho \leq \rho_2(\theta)$ bo'lsa, u holda ushbu formula o'rinli:

$$\iint_D f(\rho \cos \theta, \rho \sin \theta) d\rho d\theta = \int_0^\pi d\theta \int_{\alpha(\theta)}^{\rho_2(\theta)} f(\rho \cos \theta, \rho \sin \theta) \rho d\rho, \quad (2)$$

bu yerda

$$I = \begin{vmatrix} x'_\rho & x'_\theta \\ y'_\rho & y'_\theta \end{vmatrix} = \begin{vmatrix} \cos \theta & -\rho \sin \theta \\ \sin \theta & \rho \cos \theta \end{vmatrix} = \rho \quad (3)$$

almashtirish yakobiani deyiladi va $I \neq 0$ bo'lgandagina almashtirish mumkin.

$x = x(u, v)$, $y = y(u, v)$ almashtirish yordamida esa quyidagi ko'rinishga keltirib, integral hisoblanadi:

$$\iint_D f(x, y) dx dy = \iint_{D'} f[x(u, v), y(u, v)] |I| du dv. \quad (4)$$

105. $\iint_D \sqrt{x^2 + y^2} dx dy$, $D: x^2 + y^2 \leq a^2$ doiraning I-choragi bo'lsa integralni qutb koordinatalar sistemasiga o'tib hisoblang.

Yechish. $x = \rho \cos \theta$, $y = \rho \sin \theta$ almashtirishda $I = \rho$ ga teng bo'lib, $|\theta| \in \left[0; \frac{\pi}{2}\right]$, $\rho^2 = a^2 \Rightarrow \rho \in [0; a]$. U holda integral quyidagi ko'rinishni oladi:

$$\begin{aligned} \iint_D \sqrt{x^2 + y^2} dx dy &= \iint_D \sqrt{\rho^2 \cos^2 \theta + \rho^2 \sin^2 \theta} \rho d\rho d\theta = \\ &= \int_0^{\pi/2} d\theta \int_0^a \rho^2 d\rho = \frac{1}{3} \int_0^{\pi/2} \rho^3 \Big|_0^a d\theta = \frac{a^3}{3} \int_0^{\pi/2} d\theta = \frac{\pi a^3}{6}. \end{aligned}$$

106. $\iint_D (x+y)^3 (x-y)^2 dx dy$, $D: x+y=1, x-y=1, x+y=-1, x-y=-1$ chiziqlar bilan chegaralangan kvadrat bo'lsa integralni hisoblang.

Yechish. $x+y=u$, $x-y=v$ almashtirish bajarsak, $x = \frac{1}{2}(u+v)$, $y = \frac{1}{2}(u-v)$ kelib chiqadi.

U holda:

$$I = \begin{vmatrix} x'_u & x'_v \\ y'_u & y'_v \end{vmatrix} = \begin{vmatrix} \frac{1}{2} & \frac{1}{2} \\ \frac{1}{2} & -\frac{1}{2} \end{vmatrix} = -\frac{1}{2} \text{ yoki } |I| = \frac{1}{2}.$$

$$\begin{aligned} \iint_D (x+y)^3 (x-y)^2 dx dy &= \frac{1}{2} \int_{-1}^1 u^3 du \int_{-1}^1 v^2 dv = \\ &= \frac{1}{2} \int_{-1}^1 u^3 \left[\frac{1}{3} v^3 \right]_{-1}^1 du = \frac{1}{3} \int_{-1}^1 u^3 du = \frac{1}{12} u^4 \Big|_{-1}^1 = \frac{1}{6} \end{aligned}$$

Quyidagi ikki karrali integrallarni o'zgaruvchilarini almashtirish usuli bilan hisoblang

107. $\iint_D \frac{dxdy}{x^2 + y^2 + 1}$, D: $y = \sqrt{1-x^2}$ yarim aylana va Ox o'qi bilan chegaralangan.

108. $\iint_D (x^2 + y^2) dxdy$, D: $x^2 + y^2 = 2ax$ aylana bilan chegaralangan.

109. $\iint_D \frac{\sin \sqrt{x^2 + y^2}}{\sqrt{x^2 + y^2}} dxdy$, D: $x^2 + y^2 = \frac{\pi^2}{9}$, $x^2 + y^2 = \pi^2$ chiziqlar bilan chegaralangan.

110. $\iint_D \sqrt{x^2 + y^2} dxdy$, D: $x^2 + y^2 = a^2$, $x^2 + y^2 = 4a^2$ chiziqlar bilan chegaralangan.

111. $\int_0^1 dx \int_0^{2x} dy$ x = u(1-v), y = uv almashtirish bajarib hisoblang.

112*. $\iint_D dxdy$, D: xy = 1, xy = 2, y = x, y = 3x ciziqlar bilan chegaralangan.

8-§. Ikki o'ichovli integralning geometriyaga tatbiqi

Agar D soha $a \leq x \leq b$, $y_1(x) \leq y \leq y_2(x)$ tengsizliklar bilan aniqlangan bo'lsa, u holda bu sohaning yuzi quyidagicha ifodalanadi:

$$S = \lim_{\substack{\Delta x \rightarrow 0 \\ \Delta y \rightarrow 0}} \sum \sum \Delta x \Delta y = \iint_D dxdy = \int_a^b dx \int_{y_1(x)}^{y_2(x)} dy. \quad (5)$$

Agar D soha $c \leq y \leq d$, $x_1(y) \leq x \leq x_2(y)$ tengsizliklar bilan aniqlangan bo'lsa, u holda

$$S = \lim_{\substack{\Delta x \rightarrow 0 \\ \Delta y \rightarrow 0}} \sum \sum \Delta x \Delta y = \iint_D dxdy = \int_c^d dy \int_{x_1(y)}^{x_2(y)} dx. \quad (6)$$

Agar D soha qutb koordinatalarida $\varphi_1 \leq \varphi \leq \varphi_2$, $\rho_1(\varphi) \leq \rho \leq \rho_2(\varphi)$ tengsizliklar bilan aniqlansa, u holda bu sohaning yuzi:

$$S = \iint_D \rho d\rho d\varphi = \int_{\varphi_1}^{\varphi_2} d\varphi \int_{\rho_1(\varphi)}^{\rho_2(\varphi)} \rho d\rho. \quad (7)$$

Agar D soha, quyidan oxy tekislik bilan, yuqoridan $f(x,y)$ funksiya bilan chegaralangan bo'lsa, jism hajmi quyidagi formula bilan hisoblanadi:

$$V = \iint_D f(x,y) dx dy. \quad (8)$$

Agar silliq sirt $z = f(x,y)$ formula bilan berilgan bo'lsa, uning sirtining yuzi quyidagi formula bilan hisoblanadi:

$$S = \iint_D \sqrt{1 + \left(\frac{\partial z}{\partial x} \right)^2 + \left(\frac{\partial z}{\partial y} \right)^2} dx dy. \quad (9)$$

113. $x+y=6$ va $x=4y-y^2$ chiziqlar bilan chegaralangan figuraning yuzi hisoblansin.

Yechish. $x+y=6$ va $x=4y-y^2$ chiziqlarni kesishish nuqtasini topamiz.

$\begin{cases} x+y=6 \\ x=4y-y^2 \end{cases}$ sistemani yechib, $A(4;2)$ va $B(3;3)$ nuqtalarni topamiz.

Natijada:

$$S = \iint_D dx dy = \int_2^3 dy \int_{4y-y^2}^{4y-y^2} dx = \int_2^3 x \Big|_{4y-y^2}^{4y-y^2} dy = \int_2^3 (5y - y^2 - 6) dy = \left(\frac{5y^2}{2} - \frac{y^3}{3} - 6y \right) \Big|_2^3 = \frac{1}{6}.$$

114. $\rho=1$, $\rho=\frac{2}{\sqrt{3}} \cos\varphi$ chiziqlar bilan chegaralangan figuraning yuzini hisoblang.

Yechish. $1 = \frac{2}{\sqrt{3}} \cos\varphi$ deb A nuqtani topamiz, $A\left(1, \frac{\pi}{6}\right)$, u holda yuza:

$$\begin{aligned} S &= \iint_D \rho d\rho d\varphi = 2 \int_0^{\pi/6} d\varphi \int_1^{\frac{2}{\sqrt{3}} \cos\varphi} \rho d\rho = \int_0^{\pi/6} \rho^2 \Big|_1^{\frac{2}{\sqrt{3}} \cos\varphi} d\varphi = \int_0^{\pi/6} \left(\frac{4}{3} \cos^2 \varphi - 1 \right) d\varphi = \\ &= \int_0^{\pi/6} \left(\frac{2}{3} \cos 2\varphi - \frac{1}{3} \right) d\varphi = \frac{1}{3} (\sin 2\varphi - \varphi) \Big|_0^{\pi/6} = \frac{1}{3} \left(\sin \frac{\pi}{3} - \frac{\pi}{6} \right) = \frac{1}{18} (3\sqrt{3} - \pi). \end{aligned}$$

115. $z=3x$, $y=1+x^2$, $y=5$, $z=0$ sirtlar bilan chegaralangan 1- oktantaga joylashgan jism hajmini hisoblang.

Yechish.

$$V = \iint_D f(x, y) dx dy = 3 \int_0^2 x dx \int_{1+x^2}^5 dy = 3 \int_0^2 x \cdot y \Big|_{1+x^2}^5 dx = 3 \int_0^2 (4x - x^3) dx = \\ = 3 \left(2x^2 - \frac{1}{4}x^4 \right) \Big|_0^2 = 12(\text{kubbir.}).$$

116. $x^2 + y^2 = a^2$, $x^2 + z^2 = a^2$ sirtlar bilan chegaralangan jism hajmini hisoblang.

Yechish. Berilgan jismning hajmi:

$$V = \iint_D f(x, y) dx dy = 8 \iint_D \sqrt{a^2 - x^2} dx dy = 8 \int_0^a \sqrt{a^2 - x^2} dx \int_0^{\sqrt{a^2 - x^2}} dy = \\ = 8 \int_0^a (a^2 - x^2) dx = 8 \left[a^2 x - \frac{1}{3} x^3 \right] \Big|_0^a = \frac{16a^3}{3}.$$

117. $x^2 + y^2 = 2x$ silindr ichiga joylashgan $z = \sqrt{x^2 + y^2}$ konus sirtining yuzini hisoblang.

Yechish. Konus formulasidan $\frac{\partial z}{\partial x} = \frac{x}{\sqrt{x^2 + y^2}}$, $\frac{\partial z}{\partial y} = \frac{y}{\sqrt{x^2 + y^2}}$,

$x = \rho \cos \theta$, $y = \rho \sin \theta$ qutb koordinatalar sistemasiga o'tib:

$$S = \iint_D \sqrt{1 + \left(\frac{\partial z}{\partial x} \right)^2 + \left(\frac{\partial z}{\partial y} \right)^2} dx dy = \sqrt{2} \iint_D dx dy = \sqrt{2} \int_{-\pi/2}^{\pi/2} d\theta \int_0^{2 \cos \theta} \rho d\rho = \\ = 2\sqrt{2} \int_0^{\pi/2} \frac{1}{2} \rho^2 \Big|_0^{2 \cos \theta} d\theta = 4\sqrt{2} \int_0^{\pi/2} \cos^2 \theta d\theta = 2\sqrt{2} \int_0^{\pi/2} (1 + \cos 2\theta) d\theta = \\ = 2\sqrt{2} \left(\theta + \frac{1}{2} \sin 2\theta \right) \Big|_0^{\pi/2} = \sqrt{2}\pi.$$

118. $y^2 + z^2 = 1$ silindr ichiga joylashgan $x = 1 - y^2 - z^2$ paraboloid sirtining yuzini hisoblang.

Yechish. Paraboloid formulasidan $\frac{\partial x}{\partial y} = -2y$, $\frac{\partial x}{\partial z} = -2z$,

$$S = \iint_D \sqrt{1 + \left(\frac{\partial x}{\partial y} \right)^2 + \left(\frac{\partial x}{\partial z} \right)^2} dy dz = \iint_D \sqrt{1 + 4(y^2 + z^2)} dy dz.$$

$x = \rho \cos \theta$, $y = \rho \sin \theta$ qutb koordinatalar sistemasiga o'tib:

$$S = \int_0^{2\pi} d\theta \int_0^1 \rho \sqrt{1+4\rho^2} d\rho = \int_0^{2\pi} \left[\frac{2}{3} \cdot \frac{1}{8} (1+4\rho^2)^{3/2} \right]_0^1 = \\ = \frac{5\sqrt{5}-1}{12} \int_0^{2\pi} d\theta = \frac{5\sqrt{5}-1}{6} \pi (\text{kv.bir.}).$$

Quyidagi chiziqlar bilan chegaralangan figuraning yuzini toping

119. $y = y^2 - 2y, x + y = 0.$

120. $y = 2 - x, y^2 = 4x + 4.$

121. $y^2 + 2y - 3x + 1 = 0, 3x - 3y - 7 = 0.$

122*. $y = \cos x, y = \cos 2x + 4, y = 0,$ koordinata boshiga yaqin yuza

123. $y = 4x - x^2, y = 2x^2 - 5x.$

124. $x = 4 - y^2, x + 2y - 4 = 0.$

125. $\rho = 2 - \cos \theta, \rho = 2,$ kardiodadan tashqaridagi yuza.

126*. $\rho = 2(1 - \cos \theta), \rho = 2\cos \theta.$

Quyidagi sirtlar bilan chegaralangan jismning hajmini toping

127. $x^2 + y^2 = 8, x = 0, y = 0, z = 0, x + y + z = 4.$

128. $x = 2y^2, x + 2y + z = 4, y = 0, z = 0.$

129. $x^2 + 4y^2 + z = 1, z = 0.$

130. $z = x^2 + y^2, y = x^2, y = 1, z = 0.$

131. $z = 4 - x^2, 2x + y = 4, x = 0, y = 0, z = 0.$

132. $z^2 = xy, x = 0, x = 1, y = 0, y = 4, z = 0.$

133. $z = 5x, x^2 + y^2 = 9, z = 0.$

134*. $x + y + z = 6, 3x + 2y = 12, 3x + y = 6, y = 0, z = 0.$

Quyidagi sirtlar yuzasini toping

135. $y = x^2 + z^2$ sirtning, $x^2 + z^2 = 1$ silindr ichida joylashgan I-oktantadagi qismi sirti yuzini toping.

136. $x^2 + y^2 + z^2 = 4$ sferaning $\frac{x^2}{4} + z^2 = 1$ silindr ichida joylashgan qismi sirti yuzini toping.

137. $z = x$ tekislikning $x^2 + z^2 = 4$ silindr ichida va $z = 0$ tekislikdan yuqorida joylashgan qismi sirti yuzini toping.

138. $z = x^2$ silindring $x+y=\sqrt{2}$, $x=0$, $y=0$ tekisliklar orasidagi qismi sirtining yuzini toping.

139. $x^2+z^2=4$ silindring $x^2+y^2=4$ silindr ichida joylashgan qismi sirti yuzini toping.

140. $z^2=2xy$ sirtning $x=1$, $y=4$, $z=0$ tekisliklar bilan kesishishidan hosil bo'lgan qismi yuzini toping.

9-§. Ikki o'lchovli integralning fizikaga tatbiqi

a) Massasi tekis taqsimlangan D sohaning statik momentlari:

$$x_c = \iint_D x \, dx \, dy, \quad y_c = \iint_D y \, dx \, dy. \quad (10)$$

b) Jismning massasi, $\rho(x,y)$ -zichlikka ega bo'lganda

$$m = \iint_D \rho(x,y) \, dx \, dy. \quad (11)$$

d) Massasi tekis taqsimlangan D sohaning og'irlik markazi

$$x_c = \frac{1}{S} \iint_D x \, dx \, dy, \quad y_c = \frac{1}{S} \iint_D y \, dx \, dy. \quad (12)$$

e) Massasi tekis taqsimlangan D sohaning inersiya momentlari

$$I_x = \iint_D y^2 \rho(x,y) \, dx \, dy \text{ ox o'qqa nisbatan,} \\ I_y = \iint_D x^2 \rho(x,y) \, dx \, dy \text{ oy o'qqa nisbatan,} \quad (13)$$

$$I_0 = \iint_D (x^2 + y^2) \rho(x,y) \, dx \, dy \text{ koordinata boshiga nisbatan}$$

formulalar bilan hisoblanadi.

141. $y^2 = 4x+4$, $y^2 = -2x+4$, ciziqlar bilan chegaralangan figuraning og'irlik markazi koordinatasini toping.

Yechish. Hosil bo'lgan figura Ox o'qqa simmetrik bo'lgani uchun $y_c = 0$.

Berilgan figuraning yuzini topamiz:

$$S = \iint_D dx \, dy = 2 \int_0^2 dy \int_{(y^2-4)/4}^{(4-y^2)/2} dx = 2 \int_0^2 \left(\frac{4-y^2}{2} - \frac{y^2-4}{4} \right) dy = \\ = 2 \int_0^2 \left(3 - \frac{3y^2}{4} \right) dy = 6 \left(y - \frac{1}{12} y^3 \right) \Big|_0^2 = 8.$$

U holda (12) formuladan:

$$\begin{aligned} x_c &= \frac{1}{8} \iint_D x dx dy = \frac{1}{8} \cdot 2 \int_0^2 dy \int_{(y^2-4)/4}^{(4-y^2)/4} x dx = \frac{1}{8} \int_0^2 \left[\frac{1}{4} (4-y^2)^2 - \frac{1}{16} (y^2-4)^2 \right] dy = \\ &= \frac{1}{8} \int_0^2 \left(3 - \frac{3}{2} y^2 + \frac{3}{16} y^4 \right) dy = \frac{1}{8} \left(3y - \frac{y^3}{2} + \frac{3y^5}{80} \right) \Big|_0^2 = \frac{2}{5}, \quad O_c \left(\frac{2}{5}; 0 \right). \end{aligned}$$

142. $\rho = a(1+\cos\theta)$ kardiodaning Ox o‘qqa nisbatan inersiya momentini toping.

Yechish. Inersiya momentini formulasi (13) ning 1-sidan foydalanamiz.

$$\begin{aligned} I_x &= \iint_D \rho^2 \sin^2 \theta \rho d\rho d\theta = \int_0^{2\pi} \sin^2 \theta d\theta \int_0^{a(1+\cos\theta)} \rho^3 d\rho = \\ &= \frac{1}{4} \int_0^{2\pi} \sin^2 \theta \rho^4 \Big|_0^{a(1+\cos\theta)} d\theta = \frac{1}{4} a^4 \int_0^{2\pi} \sin^2 \theta (1+\cos\theta)^4 d\theta = \\ &= \frac{1}{4} a^4 \int_0^{2\pi} \sin^2 \theta (1+4\cos\theta+6\cos^2\theta+4\cos^3\theta+\cos^4\theta) d\theta = \frac{21}{32} \pi a^4. \end{aligned}$$

Quyidagi yuzalarning og‘irlik markazini toping

143. $y=x^2$, $y=2x^2$, $x=1$, $x=2$ chiziqlar bilan chegaralangan yuzalarning og‘irlik markazini toping.

144. $\rho = a(1+\cos\theta)$ kardioda chiziqlari bilan chegaralangan yuzalarning og‘irlik markazini toping.

145. $y^2 = ax$ parabolaning $x=a$, $y=0$ ($y>0$) chiziqlar bilan kesishishidan hosil bo‘lgan yarimsegmentning og‘irlik markazini toping.

146. $\rho = a \sin 2\theta$ chiziqning bir aylanishi bilan chegaralangan yuzanining og‘irlik markazini toping.

Quyidagi yuzalarning inersiya momentini toping

147. $y=2\sqrt{x}$, $x+y=3$, $y=0$ chiziqlar bilan chegaralangan yuzanining inersiya momentini toping.

148. $x+y=2$, $x=0$, $y=0$ chiziqlar bilan chegaralangan yuzanining qutbdagi inersiya momentini toping.

149. $y=4-x^2$, $y=0$ chiziqlar va Ox o'q bilan chegaralangan yuzalarning inersiya momentini toping.

150. $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$ ellipsning katta o'qiga nisbatan yuzalarning inersiya momentini toping.

10-§. Uch o'lchovli integrallar

Uch o'lchovli integrallar ham ikki o'lchovli integrallarga o'xshash aniqlanadi.

Endi fazoning biror ω sohasida va shu sohaning σ chegarasida aniqlangan uchta o'zgaruvchining funksiyasi $u=f(x,y,z)$ ni qaraymiz.

$$\sum_{i=1}^n f(p_i) \Delta \omega_i = \sum_{i=1}^n f(x_i, y_i, z_i) \Delta \omega_i$$

yig'indini ω sohada $u=f(x,y,z)$ funksiyalar uchun integral yig'indi deb ataymiz.

Uch o'lchovli integrallar quyidagi formula bilan aniqlanadi:

$$\lim_{\Delta \omega_i \rightarrow 0} \sum_{i=1}^n f(x_i, y_i, z_i) \Delta \omega_i = \iiint_{\omega} f(x, y, z) dx dy dz .$$

Uch o'lchovli integralni ushbu formula bo'yicha hisoblanadi:

$$\iiint_{\omega} f(x, y, z) dx dy dz = \int_a^b dx \int_{\varphi_1(x)}^{\varphi_2(x)} dy \int_{\psi_1(x, y)}^{\psi_2(x, y)} f(x, y, z) dz .$$

Silindrik koordinatalar sistemasida $x=\rho \cos \theta$, $y=\rho \sin \theta$, $z=z$

$$\begin{aligned} \iiint_{\omega} f(x, y, z) dx dy dz &= \iiint_{\omega} f[\rho \cos \theta, \rho \sin \theta, z] \rho d\rho d\theta dz = \\ &= \int_{\theta_1}^{\theta_2} d\theta \int_{\rho_1(\theta)}^{\rho_2(\theta)} \rho d\rho \int_{z_1}^{z_2} f[\rho \cos \theta, \rho \sin \theta, z] dz . \end{aligned}$$

151. $I = \iiint_{\omega} z dx dy dz$ integralni hisoblang, bu yerda ω soha:
 $0 \leq x \leq 1/2$, $x \leq y \leq 2x$, $0 \leq z \leq \sqrt{1-x^2-y^2}$.

Yechish.

$$I = \iiint_{\omega} z dx dy dz = \int_0^{1/2} dx \int_x^{2x} dy \int_0^{\sqrt{1-x^2-y^2}} z dz = \frac{1}{2} \int_0^{1/2} dx \int_x^{2x} z^2 \Big|_0^{\sqrt{1-x^2-y^2}} dy =$$

$$\begin{aligned}
 &= \frac{1}{2} \int_0^{1/2} dx \int_x^{2x} (1-x^2-y^2) dy = \frac{1}{2} \int_0^{1/2} \left[y - x^2y - \frac{1}{3}y^3 \right]_x^{2x} dx = \\
 &= \frac{1}{2} \int_0^{1/2} \left(2x - 2x^3 - \frac{8}{3}x^3 - x + x^3 + \frac{1}{3}x^3 \right) dx = \frac{1}{2} \int_0^{1/2} \left(x - \frac{10}{3}x^3 \right) dx = \\
 &= \frac{1}{2} \left[\frac{1}{2}x^2 - \frac{5}{6}x^4 \right]_0^{1/2} = \frac{1}{2} \left(\frac{1}{8} - \frac{5}{6} \cdot \frac{1}{16} \right) = \frac{7}{192}.
 \end{aligned}$$

152. $I = \iiint_T x^2 y z dxdydz$ ni hisoblang. Bu yerda T soha quyidagi

tekisliklar bilan chegaralangan $x=0, y=0, z=0, x+y+z=2=0$.

Yechish. T soha yuqoridaan $z=2-x-y$ pastdan $z=0$ bilan chegaralangan. Jismning proyeksiyasi Oxy tekislikdagi $x=0, y=0, y=2-x$ to'g'ri chiziqlar bilan chegaralangan uchburchakdan iborat.

$$\begin{aligned}
 I &= \iiint_T x^2 y z dxdydz = \int_0^2 x^2 dx \int_0^{2-x} y dy \int_0^{2-x-y} z dz = \int_0^2 x^2 dx \int_0^{2-x} y \frac{(2-x-y)^2}{2} dy = \\
 &= \frac{1}{2} \int_0^2 x^2 \left[\frac{(2-x)^4}{2} + \frac{(2-x)^4}{4} - \frac{2(2-x)^4}{3} \right] dx = \frac{1}{24} \int_0^2 x^2 (2-x)^4 dx = \frac{16}{315}.
 \end{aligned}$$

153. $I = \iiint_T x^2 dxdydz$ uch o'chovli integralni hisoblang, bunda

$T: x^2 + y^2 + z^2 \leq R$ shar.

Yechish. Ushbu

$$x = \rho \cos\theta, \quad y = \rho \sin\theta, \quad \theta \quad (0 \leq \rho \leq R, 0 \leq \varphi \leq 2\pi, 0 \leq \theta \leq \pi)$$

almash tirish yordamida sferik koordinatalar sistemasiga o'tamiz. U holda:

$$\begin{aligned}
 I &= \iiint_T \rho^2 \sin^3 \theta \cos^2 \varphi d\rho d\theta d\varphi = \int_0^\pi \sin^3 \theta d\theta \int_0^{2\pi} \cos^2 \varphi d\varphi \int_0^R \rho^4 d\rho = \\
 &= \frac{R^5}{5 \cdot 2} \int_0^\pi \sin^3 \theta d\theta \left[\varphi + \frac{1}{2} \sin 2\varphi \right]_0^{2\pi} = \frac{\pi R^5}{5} \int_0^\pi (\cos^2 \theta - 1) d(\cos \theta) = \frac{4\pi R^5}{15}.
 \end{aligned}$$

Quyidagi uch o'chovli integrallarni hisoblang

154. $\iiint_T (x^2 + y^2 + z^2) dxdydz$ integralni hisoblang, bu yerda

$T: 0 \leq x \leq a, 0 \leq y \leq b, 0 \leq z \leq c$.

155. $\iiint_T xyz \, dx \, dy \, dz$ integralni hisoblang, bu yerda

$$T: x^2 + y^2 + z^2 = 1, \quad x = 0, \quad y = 0, \quad z = 0.$$

156. $\iiint_T xy^2 z^3 \, dx \, dy \, dz$ integralni hisoblang, bu yerda

$$T: z = xy, \quad y = x, \quad x = 1, \quad z = 0.$$

157. $\iiint_T (2x + 3y - z) \, dx \, dy \, dz$ integralni hisoblang, bu yerda

$$T: z = 0, \quad z = a, \quad x = 0, \quad y = 0, \quad x + y = b, \quad (a > 0, \quad b > 0).$$

158. $\iiint_T zdxdydz$ integralni hisoblang, bu yerda $T: z^2 = x^2 + y^2$,

kanonik sirt va $z = 2$ bilan chegaralangan.

159. $\iiint_T x \, dx \, dy \, dz$ integralni hisoblang, bu yerda

$$T: x = 0, \quad y = 0, \quad z = 0, \quad y = 3, \quad x + z = 2 \text{ tekisliklar bilan chegaralangan.}$$

160*. $\iiint_T (x^2 + y^2 + z^2)^{\frac{3}{2}} \, dx \, dy \, dz$ integralni hisoblang, bu yerda

$$T: x^2 + z^2 = 1, \text{ silindr va } y = 0, \quad y = 1 \text{ tekisliklar.}$$

161*. $\iiint_T (x + y + z)^2 \, dx \, dy \, dz$ integralni hisoblang, bu yerda

$$T: z \geq \frac{x^2 + y^2}{2a} \text{ paraboloid va } x^2 + y^2 + z^2 \leq 3a^2 \text{ shar bilan chegaralangan.}$$

11-§. Uch o'chovli integrallarni tatbiqlari

$f(x, y, z) = 1$ bo'lganda uch o'chovli integral T jism hajmini ifodalaydi:

$$V = \iiint_T dx \, dy \, dz.$$

Jismning massasi $\gamma = \gamma(x, y, z)$ zichlikka ega bo'lgan jism uchun quyidagi formula bilan topiladi:

$$M = \iiint_T \gamma(x, y, z) \, dx \, dy \, dz.$$

Jismning og'irlik markazi quyidagi formula bilan topiladi:

$$\bar{x} = \frac{1}{M} \iiint_T \gamma x \, dx \, dy \, dz, \quad \bar{y} = \frac{1}{M} \iiint_T \gamma y \, dx \, dy \, dz, \quad \bar{z} = \frac{1}{M} \iiint_T \gamma z \, dx \, dy \, dz.$$

Jismning inersiya markazi quyidagi formula bilan topiladi:

$$I_x = \iiint_T (y^2 + z^2) dx dy dz, \quad I_y = \iiint_T (x^2 + z^2) dx dy dz, \quad I_z = \iiint_T (x^2 + y^2) dx dy dz.$$

162. $h = x^2 + y^2$, $z = h$ sirtlar bilan chegaralangan jismning hajmini toping.

Yechish. Izlanayotgan hajmga ega bo'lgan jism pastdan $z = (x^2 + y^2)/h$ paraboloid bilan, yuqoridan $z = h$ tekislik bilan chegaralanib, Oxy tekislikda $x^2 + y^2 \leq h$ aylana bo'ylab kesishadi. Silindrik koordinatalar sistemasiga o'tib $x = \rho \cos \theta$, $y = \rho \sin \theta$, $z = z$ paraboloid tenglamasi $z = \frac{\rho^2}{h}$ ko'rinishni oladi. U holda:

$$\begin{aligned} V &= \iiint_T dx dy dz = \iiint_T \rho d\rho d\varphi dz = \int_0^{2\pi} d\varphi \int_0^h \rho d\rho \int_{\rho^2/h}^h dz = \\ &= \int_0^{2\pi} d\varphi \int_0^h \left(h - \frac{\rho^2}{h} \right) \rho d\rho = \int_0^{2\pi} \left(\frac{h\rho^2}{2} - \frac{\rho^4}{4h} \right)_0^h d\varphi = \left(\frac{h^3}{2} - \frac{h^3}{4} \right) \int_0^{2\pi} d\varphi = \frac{\pi h^3}{2}. \end{aligned}$$

163. $x = 0$, $z = 0$, $y = 1$, $y = 3$, $x + 2z = 3$ tekisliklar bilan chegaralangan prizmatik jism og'irlik markazining koordinatalarini toping.

Yechish. Jismning hajmini topamiz:

$$V = \iiint_T dx dy dz = \int_0^3 dx \int_1^3 dy \int_0^{(3-x)/2} dz = \int_0^3 dx \int_1^3 \frac{3-x}{2} dy = \int_0^3 (3-x) dx = \left(3x - \frac{1}{2}x^2 \right)_0^3 = \frac{9}{2}.$$

U holda

$$\begin{aligned} \bar{x} &= \frac{2}{9} \iiint_T x dx dy dz = \frac{2}{9} \int_0^3 x dx \int_1^3 dy \int_0^{(3-x)/2} dz = \frac{2}{9} \int_0^3 x dx \int_1^3 \frac{3-x}{2} dy = \\ &= \frac{2}{9} \int_0^3 x (3-x) dx = \frac{2}{9} \left(\frac{3}{2}x^2 - \frac{1}{3}x^3 \right)_0^3 = 1. \end{aligned}$$

$$\begin{aligned} \bar{y} &= \frac{2}{9} \iiint_T y dx dy dz = \frac{2}{9} \int_0^3 dx \int_1^3 y dy \int_0^{(3-x)/2} dz = \frac{1}{9} \int_0^3 dx \int_1^3 y (3-x) dy = \\ &= \frac{4}{9} \int_0^3 (3-x) dx = \frac{4}{9} \left(3x - \frac{1}{2}x^2 \right)_0^3 = 2. \end{aligned}$$

$$\begin{aligned} \bar{z} &= \frac{2}{9} \iiint_T z dx dy dz = \frac{2}{9} \int_0^3 dx \int_1^3 dy \int_0^{(3-x)/2} z dz = \frac{2}{9} \int_0^3 \frac{(3-x)^2}{8} dx \int_1^3 dy = \\ &= \frac{1}{18} \left(\frac{-(3-x)^3}{3} \right)_0^3 = \frac{1}{2}. \quad C\left(1; 2; \frac{1}{2} \right). \end{aligned}$$

Uch o'chovli integrallarni tatbiqlariga doir misollar

164. $z = \sqrt{x^2 + y^2}$, $z = x^2 + y^2$ sirtlar bilan chegaralangan jism hajmini toping.

165. $z = 0$ tekislik, $x = \frac{x^2 + y^2}{2}$ silindrik sirt va $x^2 + y^2 + z^2 = 4$ sfera ichidagi qismining hajmini toping.

166. $0 \leq x \leq a$, $0 \leq y \leq a$, $0 \leq z \leq a$ kubning $M(x,y,z)$ nuqtadagi zichligi $\gamma(x,y,z) = x + y + z$ bo'lsa, uning massasini toping.

167. $x + y = 1$, $z = x^2 + y^2$, $x = 0$, $y = 0$, $z = 0$ sirtlar bilan chegaralangan jism og'irlilik markazining koordinatalarini toping.

168. $z^2 = xy$, $x = 5$, $y = 5$, $z = 0$ sirtlar bilan chegaralangan jism og'irlilik markazining koordinatalarini toping.

169*. $2x + 3y - 12 = 0$, $x = 0$, $y = 0$, $z = 0$ tekisliklar bilan chegaralangan jism og'irlilik markazining koordinatalarini toping.

170*. $2x + 3y - 12 = 0$, $x = 0$, $y = 0$, $z = 0$ tekisliklar bilan chegaralangan jism og'irlilik markazining koordinatalarini toping.

12-§. Egri chiziqli integrallar

Aniq integral tushunchasini integrallash sohasi tekislikda yotuvchi qandaydir egri chiziqni bir qismi bo'lgan hol uchun umumlashtiramiz.

Bunday turdagি integrallar egri chiziqli integrallar deb ataladi.

Egri chiziqli integrallar ikki turda bo'ladi: birinchi va ikkinchi tur egri chiziqli integrallar. Tushunishga qulaylik tug'dirish maqsadida ta'rifni tekislikda yotgan egri chiziq uchun beramiz.

I - tur egri chiziqli integral

K egri chiziqning AB yoyida uzlusiz $f(x,y)$ funksiya berilgan bo'lsin.

$$\sum_{i=1}^n f(M_i^*) \Delta_i \quad (1)$$

yig'indini tuzamiz, bu yerda Δ_i AB yoyning $M_{i-1}M_i$ bo'lagining uzunligi, M_i^* esa $M_{i-1}M_i$ yoyning ixtiyoriy nuqtasi. (1) yig'indi $f(x,y)$ funksianing K egri chiziqning AB yoyidagi integral yig'indisi deyiladi.

1-ta'rif. Agar (1) integral yig'indi $\Delta l_i \rightarrow 0$ da limitga ega bo'lsa, u holda bu limit AB egri chiziq bo'yicha $f(x,y)$ funksiyadan olingan 1-tur egri chiziqli integral deb ataladi va quyidagicha belgilanadi (yoy uzunligi bo'yicha).

$$\lim_{\max \Delta l_i \rightarrow 0} \sum_{i=1}^n f(M_i^*) \Delta l_i = \int_{AB} f(x,y) dl. \quad (2)$$

1-tur egri chiziqli integralda AB egri chiziq Dekart koordinatalar sistemasida $y=\varphi(x)$, $a \leq x \leq b$ formula bilan berilgan bo'lsa (2) integral quyidagicha hisoblanadi:

$$\int_{AB} f(x,y) dl = \int_a^b f[x, \varphi(x)] \sqrt{1 + [\varphi'(x)]^2} dx. \quad (3)$$

1-tur egri chiziqli integralda AB egri chiziq parametrik ko'rinishda $x=\varphi(t)$, $y=\psi(t)$, $t_1 \leq t \leq t_2$ formula bilan berilgan bo'lsa (2) integral quyidagicha hisoblanadi:

$$\int_{AB} f(x,y) dl = \int_{t_1}^{t_2} f[\varphi(t), \psi(t)] \sqrt{[\varphi'(t)]^2 + [\psi'(t)]^2} dt. \quad (4)$$

1-tur egri chiziqli integral aniq integral kabi xossalarga ega bo'ladi faqat

$$\int_{AB} f(x,y) dl = \int_{BA} f(x,y) dl \text{ bilan farq qiladi.}$$

II - tur egri chiziqli integral

K egri chiziqning AB yoyida uzlusiz $P(x,y)$ va $Q(x,y)$ funksiyalar berilgan bo'lsin.

$$\sum_{i=1}^n [P(x_i, y_i) \Delta x_i + Q(x_i, y_i) \Delta y_i] \quad (5)$$

yig'indi $P(x,y)$ va $Q(x,y)$ funksiyaning K egri chiziqning AB yoyiga mos koordinatalar bo'yicha integral yig'indisi deyiladi.

2-ta'rif. Agar (5) integral yig'indi $\Delta x \rightarrow 0$ da $P(x,y)$ funksiya limitga ega bo'lsa, u holda bu limit Ox o'q bo'yicha $P(x,y)$ funksiyadan olingan 2-tur egri chiziqli integral deb ataladi.

Agar (5) integral yig'indi $\Delta y \rightarrow 0$ da $Q(x,y)$ funksiya limitga ega bo'lsa, u holda bu limit Oy o'q bo'yicha $Q(x,y)$ funksiyadan olingan 2-tur egri chiziqli integral deb ataladi va quyidagicha belgilanadi;

$$\lim_{\max \Delta x_i \rightarrow 0} \sum_{i=1}^n P(x_i, y_i) \Delta x_i = \int_{AB} P(x, y) dx, \quad (6)$$

$$\lim_{\max \Delta y_i \rightarrow 0} \sum_{i=1}^n Q(x_i, y_i) \Delta y_i = \int_{AB} Q(x, y) dy,$$

$$\int_{AB} P(x, y) dx + Q(x, y) dy = \int_{AB} P(x, y) dx + \int_{AB} Q(x, y) dy. \quad (7)$$

2-tur egri chiziqli integral aniq integral kabi xossalarga ega bo'ldi, faqat

$$1^{\circ}. \int_{AB} P(x, y) dx + Q(x, y) dy = - \left\{ \int_{AB} P(x, y) dx + Q(x, y) dy \right\}_{AB} \text{ bilan farq qiladi.}$$

2-tur egri chiziqli integralda AB egri chiziq Dekart koordinatalar sistemasida $y=\varphi(x)$, $a \leq x \leq b$ formula bilan berilgan bo'lsa, (7) integral quyidagicha hisoblanadi:

$$\int_{AB} P(x, y) dx + Q(x, y) dy = \int_{AB} \{P[x, \varphi(x)] + Q[x, \varphi(x)]\varphi'(x)\} dx. \quad (8)$$

2-tur egri chiziqli integralda AB egri chiziq parametrik ko'rinishda $x=\varphi(t)$, $y=\psi(t)$, $t_1 \leq t \leq t_2$, formula bilan berilgan bo'lsa, (7) integral quyidagicha hisoblanadi:

$$\int_{AB} P(x, y) dx + Q(x, y) dy = \int_{t_1}^{t_2} \{P[\varphi(t), \psi(t)]\varphi'(t) + Q[\varphi(t), \psi(t)]\psi'(t)\} dt. \quad (9)$$

$$171. \int_K (x^2 + y^2) dl \text{ egri chiziqli integralni } x=a \cos t, y=a \sin t$$

$0 \leq t \leq 2\pi$ parametrik formulalar bilan berilgan K aylana bo'yicha hisoblang.

Yechish. Integralni (4) formula bo'yicha hisoblaymiz.
 $x'=-a \sin \varphi$, $y'=a \cos \varphi$ bo'lganligi uchun

$$\int_K (x^2 + y^2) dl = \int_0^{2\pi} (a^2 \cos^2 t + a^2 \sin^2 t) \sqrt{(-a \sin t)^2 + (a \cos t)^2} dt = a^3 \int_0^{2\pi} dt = 2\pi a^3.$$

172. $\int_K (x-y) dl$ egri chiziqli integralni hisoblang, bu yerda K to'g'ri chiziqning A(0;0) nuqtadan B(4;3) nuqtagacha bo'lgan qismi:

Yechish. Avval A(0;0) va B(4;3) nuqtalardan o'tuvchi to'g'ri chiziq tenglamasini tuzib olamiz.

$$\frac{x-x_1}{x_2-x_1} = \frac{y-y_1}{y_2-y_1} \Rightarrow \frac{x-0}{4-0} = \frac{y-0}{3-0}, \Rightarrow y = \frac{3}{4}x, \Rightarrow y' = \frac{3}{4}$$

(3) formuladan

$$\int\limits_K (x-y)dl = \int\limits_0^4 \left(x - \frac{3}{4}x \right) \sqrt{1 + \left(\frac{3}{4} \right)^2} dx = \frac{1}{4} \cdot \frac{5}{4} \int\limits_0^4 x dx = \frac{5}{32} x^2 \Big|_0^4 = \frac{5}{2}.$$

173. $\int\limits_K 2xydx - x^2dy$ egri chiziqli integralni hisoblang, bu yerda

$K: O(0;0)$ va $A(2,1)$ nuqtalarni birlashtiruvchi to‘g‘ri chiziq kesmasi.

Yechish. OA kesmani ko‘ramiz. Integrallash yo‘li tenglamasini tuzamiz. Buning uchun ikki nuqtadan o‘tuvchi to‘g‘ri chiziq tenglamasidan

$$\frac{x-0}{2-0} = \frac{y-0}{1-0}, \Rightarrow y = \frac{1}{2}x, \quad 0 \leq x \leq 2, \Rightarrow y' = \frac{1}{2},$$

(8) formuladan

$$\int\limits_K 2xydx - x^2dy = \int\limits_0^2 2x \cdot \frac{1}{2}x dx - x^2 \frac{1}{2} dx = \frac{1}{2} \int\limits_0^2 x^2 dx = \frac{1}{6} x^3 \Big|_0^2 = \frac{4}{3}.$$

Quyidagi 1-tur egri chiziqli integrallarni hisoblang

174. $\int\limits_K xydl$, bunda $K: |x|+|y|=a, a>0$ kvadratdan iborat.

175. $\int\limits_K \frac{dl}{\sqrt{x^2+y^2+4}}$, bunda $K: O(0;0), A(1;2)$ nuqtalarni tutash-

tiruvchi to‘g‘ri chiziq.

176. $\int\limits_K xydl$, bunda $K: \frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$ ellipsning 1-chorakdagqi qismi.

177. $\int\limits_K y^2dl$, bunda $K: x=a(t-\sin t), y=a(t-\cos t)$ sikloidaning 1-arki.

178*. $\int\limits_K \sqrt{x^2+y^2}dl$, bunda $K: x=a(\cos t+t\sin t), y=a(\sin t-t\cos t)$.

aylananing $0 \leq t \leq 2\pi$ dagi bir aylanishi.

179*. $\int\limits_K (x^2+y^2)^2 dl$, bunda $K: r=ae^{mt}, (m>0)$ logorifmik spiralning $A(0;a)$ dan $O(-\infty;0)$ gacha bo‘lgan qismi.

Quyidagi 2-tur egri chiziqli integrallarni hisoblang

180. $\int\limits_{AB} (x^2-2xy)dx + (2xy+y^2)dy$ bunda $K: y=x^2$ parabolaning $A(1;1)$ nuqtasidan $B(2;4)$ nuqtagacha bo‘lgan yoyi.

181. $\int\limits_{AB} (2a-y)dx + xdy$ bunda $K: x=a(t-\sin t)$, $y=a(1-\cos t)$

sikloidaning birinchi arki, parametri o'sish tartibida olinadi.

182. $\int\limits_{AB} (x^2 - y^2)dx + xydy$ bunda $K: A(1;1)$, $B(3;4)$ nuqtalardan o'tuvchi kesma.

183. $\int\limits_K (x-y)^2 dx + (x+y)^2 dy$ bunda $K: \Delta OAB$ bo'yicha, $O(0;0)$, $A(2;0)$, $B(4;2)$ nuqtalar.

184*. $\int\limits_K ydx - (x^2 + y)dy$ bunda $K: y=2x-x^2$ parabolaning Ox o'qdan quyi qismi.

185*. $\int\limits_K ydx + 2xdy$ bunda $K: \frac{x}{3} + \frac{y}{2} = \pm 1$, $\frac{x}{3} - \frac{y}{2} = \pm 1$, bo'lgan rombning tomonlari bo'yicha, yo'nalish soat strelkasiga qarama-qarshi.

13-§. Ikkinci tur egri chiziqli integrallarni integrallash yo'liga bog'liq emasligi. Funksiyaning aslini to'la differensiali bo'yicha tiklash. Grin formulasi

1. Ikkinci tur egri chiziqli integrallarda D sohada

$$\frac{\partial P}{\partial y} = \frac{\partial Q}{\partial x} \quad (10)$$

shart bajarilsa,

$$\oint_C P(x,y)dx + Q(x,y)dy = 0, \quad (11)$$

yopiq C kontur bo'yicha olingan integral 0 ga teng bo'ladi.

$$dU(x,y) = P(x,y)dx + Q(x,y)dy. \quad (12)$$

To'la differensial formulasidan $O(0,0)$ dan $M(x,y)$ gacha integrallasak:

$$U(x,y) = \int_0^x P(x,0)dx + \int_0^y Q(x,y)dy + C, \quad (13)$$

$$U(x,y) = \int_0^x P(x,y)dx + \int_0^y Q(x,0)dy + C.$$

2. D soha C chiziq bilan chegaralangan bo'lib, shu sohada $P(x,y)$ va $Q(x,y)$, $\frac{\partial P}{\partial y}$, $\frac{\partial Q}{\partial x}$ lar bu yopiq sohada uzliksiz bo'lsa, quyidagi Grin formulasi o'rinni bo'ldi:

$$\oint_C P dx + Q dy = \iint_D \left(\frac{\partial Q}{\partial x} - \frac{\partial P}{\partial y} \right) dxdy, \quad (14)$$

bunda, C kontur chegarasi bo'ylab yo'naliish tanlashda D soha chapda qoladi.

$$186. I = \int_{(1,1)}^{(2,3)} (x+3y)dx + (y+3x)dy \text{ hisoblang.}$$

Yechish. $P(x,y) = x+3y$, $Q(x,y) = y+3x$, $\frac{\partial P}{\partial y} = \frac{\partial Q}{\partial x} = 3$ (10) tenglik

bajariladi. $y=1$, $dy=0$, $1 \leq x \leq 2$; $x=2$, $dx=0$, $1 \leq y \leq 3$; u holda:

$$\begin{aligned} I &= \int_1^2 (x+3)dy dx + \int_1^3 (y+6)dy = \left(\frac{x^2}{2} + 3x \right) \Big|_1^2 + \left(\frac{y^2}{2} + 6y \right) \Big|_1^3 = \\ &= \frac{4-1}{2} + 3(2-1) + \frac{9-1}{2} + 6(3-1) = 1,5 + 3 + 4 + 12 = 20,5. \end{aligned}$$

$$187. dU = [y + \ln(x+1)]dx + (x+1-e^y)dy, \text{ bo'lsa } U(x,y) \text{ ni toping.}$$

Yechish. $P(x,y) = y + \ln(x+1)$, $Q(x,y) = x+1-e^y$, $\frac{\partial P}{\partial y} = \frac{\partial Q}{\partial x} = 1$,

$$\begin{aligned} U(x,y) &= \int_0^x \ln(x+1)dx + \int_0^y (x+1-e^v)dy = \left[x \ln(x+1) - x + \ln(x+1) \right]_0^x + \\ &\quad + \left(xy + y - e^v \right) \Big|_0^y = (x+1) \ln(x+1) - x + xy + y - e^y + 1 + C. \end{aligned}$$

188. $(4x^2y^3 - 3y^2 + 8)dx + (3x^4y^2 - 6xy - 1)dy = 0$, differensial tenglamani yeching.

Yechish. Bunda $P(x,y) = 4x^2y^3 - 3y^2 + 8$, $Q(x,y) = 3x^4y^2 - 6xy - 1$,

$$\frac{\partial P}{\partial y} = \frac{\partial Q}{\partial x} = 12x^3y^2 - 6y; \text{ bundan esa } dU = Pdx + Qdy \text{ ya'ni } U = C.$$

$A(0;0)$, $B(x;y)$ nuqtalarni tanlasak:

$$U = \int_0^x 8dx + \int_0^y (3x^4y^2 - 6xy - 1)dy = C, \text{ yoki } 8x + x^4y^3 - 3xy^2 - y = C.$$

189. $I = \oint_C 2(x^2 + y^2)dx + (x+y)^2 dy$ integralni Grin formulasi yordamida hisoblang, bunda C kontur $L(1;1)$, $M(2;2)$, $N(1;3)$ uchburchak.

Yechish. Bunda $P(x,y) = 2(x^2 + y^2)$, $Q(x,y) = (x+y)^2$,

$$\frac{\partial P}{\partial y} = 4y, \quad \frac{\partial Q}{\partial x} = 2(x+y), \quad \frac{\partial Q}{\partial x} - \frac{\partial P}{\partial y} = 2x + 2y - 4y = 2(x-y),$$

$$I = \oint_C 2(x^2 + y^2)dx + (x+y)^2 dy = \iint_D 2(x-y)dxdy.$$

$LM: y=x$, $MN: y=-x+4$. Karrali integralni hisoblaymiz:

$$\begin{aligned} I &= \iint_D 2(x-y)dxdy = 2 \int_1^2 dx \int_x^{4-x} (x-y)dy = 2 \int_1^2 \left[xy - \frac{1}{2} y^2 \right]_x^{4-x} = \\ &= 2 \int_1^2 \left(x(4-x) - \frac{1}{2}(4-x)^2 - x^2 + \frac{1}{2}x^2 \right) dx = 4 \int_1^2 (4x - x^2 - 4) dx = \\ &= 4 \left(2x^2 - \frac{1}{3}x^3 - 4x \right) \Big|_1^2 = -\frac{4}{3}. \end{aligned}$$

190. $I = \oint_C -2x^2 dx + xy^2 dy$ integralni Grin formulasi yordamida hisoblang, bunda C kontur $x^2 + y^2 = R^2$ yo'nalishi soat strelkasiga qarama-qarshi.

Yechish.

Bunda $P(x,y) = -x^2 y$, $Q(x,y) = xy^2$, $\frac{\partial Q}{\partial x} - \frac{\partial P}{\partial y} = x^2 + y^2$:

$$\begin{aligned} I &= \oint_C -2x^2 y dx + xy^2 dy = \iint_D (x^2 + y^2) dxdy = |x = \rho \cos \theta, y = \rho \sin \theta, 0 \leq \theta \leq 2\pi| = \\ &= \iint_D \rho^2 \rho d\rho d\theta = \int_0^{2\pi} d\theta \int_0^R \rho^3 d\rho = \frac{1}{4} R^4 \int_0^{2\pi} d\theta = \frac{\pi R^4}{2}. \end{aligned}$$

lang. Bu yerda $C: 1 \leq x \leq 4, 0 \leq y \leq 2$ to‘rtburchakning musbat yo‘nalishi bo‘yicha.

14-§. Sirt integrali

1. $f(x, y, z)$ - funksiya, S - sirtda aniqlangan uzlusiz funksiya bo‘lsin.

$$\lim_{n \rightarrow \infty} \sum_{i=1}^n f(x_i, y_i, z_i) \Delta S_i = \iint_S f(x, y, z) dS. \quad (15)$$

(15) formula bilan aniqlangan ifoda 1-tur sirt integrali deyiladi.

Agar $z = \varphi(x, y)$ funksiya S sirtda aniqlangan, uzlusiz funksiya bo‘lsin va Oz o‘qqa parallel o‘tuvchi to‘g‘ri chiziq S sirtni faqat I ta nuqtada kesib o‘tsa, (15) integral quyidagicha hisoblanadi:

$$\iint_S f(x, y, z) dS = \iint_S f[x, y, \varphi(x, y)] \sqrt{1 + \left(\frac{\partial z}{\partial x} \right)^2 + \left(\frac{\partial z}{\partial y} \right)^2} dx dy. \quad (16)$$

Agar $P(x, y, z), Q(x, y, z), R(x, y, z)$ funksiyalar S^* , ya’ni S sirtning \vec{n} normal vektorining musbat yo‘nalishiga mos kelsa, u holda quyidagi integral, 2-tur sirt integrali deyiladi:

$$\iint_S P dy dz + Q dx dz + R dx dy = \iint_S (P \cos \alpha + Q \cos \beta + R \cos \gamma) dS. \quad (17)$$

Agar S sirt $\Phi(x, y, z) = 0$ oshkormas holda berilgan bo‘lsa, yo‘naltiruvchi kosinuslar quyidagicha bo‘ladi:

$$\cos \alpha = \frac{\pm \partial \Phi / \partial x}{\sqrt{(\partial \Phi / \partial x)^2 + (\partial \Phi / \partial y)^2 + (\partial \Phi / \partial z)^2}}, \quad \alpha = \angle(\vec{n}, Ox),$$

$$\cos \beta = \frac{\pm \partial \Phi / \partial y}{\sqrt{(\partial \Phi / \partial x)^2 + (\partial \Phi / \partial y)^2 + (\partial \Phi / \partial z)^2}}, \quad \beta = \angle(\vec{n}, Oy),$$

$$\cos \gamma = \frac{\pm \partial \Phi / \partial z}{\sqrt{(\partial \Phi / \partial x)^2 + (\partial \Phi / \partial y)^2 + (\partial \Phi / \partial z)^2}}, \quad \gamma = \angle(\vec{n}, Oz).$$

Sirtning inersiya momentlari quyidagi formulalar bilan topiladi:

$$I_{xx} = \iint_S (y^2 + z^2) dS, \quad I_{yy} = \iint_S (x^2 + z^2) dS, \quad I_{zz} = \iint_S (y^2 + x^2) dS.$$

Sirtning og'irlik markazlari $M(\bar{x}, \bar{y}, \bar{z})$ ning koordinatalari quyidagi formulalar bilan topiladi:

$$\bar{x} = \frac{1}{S} \iint_S x dS, \quad \bar{y} = \frac{1}{S} \iint_S y dS, \quad \bar{z} = \frac{1}{S} \iint_S z dS.$$

Sirtning massasi, statik momentlari quyidagi formulalar bilan topiladi:

$$m = \iint_S \gamma dS, \quad M_{xy} = \iint_S z \gamma dS, \quad M_{yz} = \iint_S x \gamma dS, \quad M_{zx} = \iint_S y \gamma dS.$$

Stoks formulasi:

$$\begin{aligned} & \oint_C P dx + Q dy + R dz = \\ & = \iint_S \left[\left(\frac{\partial R}{\partial y} - \frac{\partial Q}{\partial z} \right) \cos \alpha + \left(\frac{\partial P}{\partial z} - \frac{\partial R}{\partial x} \right) \cos \beta + \left(\frac{\partial Q}{\partial x} - \frac{\partial P}{\partial y} \right) \cos \gamma \right] dS. \end{aligned}$$

Ostrogradskiy-Gauss formulasi:

$$\iint_S (P \cos \alpha + Q \cos \beta + R \cos \gamma) dS = \iiint_V \left(\frac{\partial P}{\partial x} + \frac{\partial Q}{\partial y} + \frac{\partial R}{\partial z} \right) dx dy dz.$$

202. $I = \iint_S (x^2 + y^2) dS$, sirt integralni hisoblang, bunda S sirt $z=0$

va $z=1$ tekisliklar orasidagi $z^2 = x^2 + y^2$ konus sirtidan iborat.

Yechish. Bunda

$$z = \sqrt{x^2 + y^2}, \quad \frac{\partial z}{\partial x} = \frac{x}{\sqrt{x^2 + y^2}}, \quad \frac{\partial z}{\partial y} = \frac{y}{\sqrt{x^2 + y^2}},$$

$$dS = \sqrt{1 + \left(\frac{\partial z}{\partial x} \right)^2 + \left(\frac{\partial z}{\partial y} \right)^2} dx dy = \sqrt{1 + \frac{x^2}{x^2 + y^2} + \frac{y^2}{x^2 + y^2}} dx dy = \sqrt{2} dx dy,$$

$$I = \iint_S (x^2 + y^2) ds = \sqrt{2} \iint_D (x^2 + y^2) dx dy = |D : x^2 + y^2 \leq 1| =$$

$$= \sqrt{2} \int_0^{2\pi} d\theta \int_0^1 \rho^3 d\rho = 4\sqrt{2} \int_0^{\frac{\pi}{2}} \frac{1}{4} d\theta = \frac{\sqrt{2}}{2} \pi.$$

203. $I = \iint_S x^2 y^2 z dx dy$ sirt integralni hisoblang, bunda S sirt

$$x^2 + y^2 + z^2 = R^2$$
 sferaning yuqori yarim sirti.

Yechish. Sferadan $x^2 + y^2 + z^2 = R^2$, $z = \sqrt{R^2 - x^2 - y^2}$.

$$\begin{aligned} I &= \iint_S x^2 y^2 z dx dy = \iint_S x^2 y^2 \sqrt{R^2 - x^2 - y^2} dx dy = |x = \rho \cos \theta, y = \rho \sin \theta| = \\ &= \iint_D \rho^5 \cos^2 \theta \sin^2 \theta \sqrt{R^2 - \rho^2} d\rho d\theta = 4 \int_0^{\frac{\pi}{2}} \cos^2 \theta \sin^2 \theta d\theta \int_0^R \rho^5 \sqrt{R^2 - \rho^2} d\rho = \\ &= \left| \sqrt{R^2 - \rho^2} = t, R^2 - \rho^2 = t^2, \rho d\rho = -tdt, \rho^4 = (R^2 - t^2)^2 \right| = \\ &= \int_0^{\frac{\pi}{2}} \frac{1 - \cos 4\theta}{2} d\theta \int_0^R (R^2 - t^2)^2 t^2 dt = \frac{2}{105} \pi R^7. \end{aligned}$$

204. $z = \sqrt{a^2 - x^2 - y^2}$ yarim sferaning Oz o'qqa nisbatan inersiya momentlarini toping.

Yechish. $z = \sqrt{a^2 - x^2 - y^2}$, $\frac{\partial z}{\partial x} = \frac{-x}{\sqrt{a^2 - x^2 - y^2}}$, $\frac{\partial z}{\partial y} = \frac{-y}{\sqrt{a^2 - x^2 - y^2}}$.

$$dS = \sqrt{1 + \left(\frac{\partial z}{\partial x} \right)^2 + \left(\frac{\partial z}{\partial y} \right)^2} dx dy = \frac{adx dy}{\sqrt{a^2 - x^2 - y^2}},$$

$$I_{ac} = \iint_S (x^2 + y^2) ds = \iint_D (x^2 + y^2) \frac{adx dy}{\sqrt{a^2 - x^2 - y^2}} = |x = \rho \cos \theta, y = \rho \sin \theta| =$$

$$= \iint_D \rho^2 \frac{a}{\sqrt{a^2 - \rho^2}} \rho d\rho d\theta = |x^2 + y^2 \leq a^2| = 4a \int_0^{\pi/2} d\theta \int_0^a \frac{\rho^3 d\rho}{\sqrt{a^2 - \rho^2}} = \frac{4}{3} \pi a^5.$$

205. $I = \oint_C x^2 y^3 dx + dy + zdz$ integralni Stoks formulasi bilan hisoblang. Bu yerda $C: x^2 + y^2 = z^2$, $z = 0$.

Yechish. $z = 0$ tekislik uchun normal vektor $\vec{n} = \vec{k}$ bo'ladi, bundan esa $\cos \alpha = 0$, $\cos \beta = 0$, $\cos \gamma = 1$ kelib chiqadi. $P = x^2 y^3$, $Q = 1$, $R = z$ ekanidan:

$$\begin{aligned}
I &= \oint_S x^2 y^3 dx + dy + zdz = \\
&= \iint_S \left[\left(\frac{\partial R}{\partial y} - \frac{\partial Q}{\partial z} \right) \cos \alpha + \left(\frac{\partial P}{\partial z} - \frac{\partial R}{\partial x} \right) \cos \beta + \left(\frac{\partial Q}{\partial x} - \frac{\partial P}{\partial y} \right) \cos \gamma \right] dS = \\
&= \iint_C 3x^2 y^2 \cos \gamma dS = |\cos \gamma dS = dx dy| = -3 \iint_D x^2 y^2 dx dy.
\end{aligned}$$

D: $x^2 + y^2 = r^2$, $x = \rho \cos \theta$, $y = \rho \sin \theta$ almashtirish bajarsak:

$$\begin{aligned}
I &= -3 \iint_D \rho^5 \sin^2 \theta \cos^2 \theta d\rho d\theta = -12 \int_0^{\pi/2} \sin^2 \theta \cos^2 \theta d\theta \int_0^r \rho^5 d\rho = \\
&= -2r^6 \int_0^{\pi/2} \sin^2 \theta \cos^2 \theta d\theta = -\frac{r^6}{2} \int_0^{\pi/2} \sin^2 2\theta d\theta = -\frac{r^6}{4} \int_0^{\pi/2} (1 - \cos 4\theta) d\theta = \\
&= -\frac{r^6}{4} \left(\theta - \frac{1}{4} \sin 4\theta \right) \Big|_0^{\pi/2} = -\frac{\pi r^6}{8}.
\end{aligned}$$

206. $\oint_S (x \cos \alpha + y \cos \beta + z \cos \gamma) dS$ integralni S jism sirti

bo'yicha Gaus-Ostrogratskiy formulasi yordamida hisoblang.

Yechish. Gaus-Ostrogratskiy formulasiga asosan:

$$\oint_S (x \cos \alpha + y \cos \beta + z \cos \gamma) dS = \iiint_V \left(\frac{\partial x}{\partial x} + \frac{\partial y}{\partial y} + \frac{\partial z}{\partial z} \right) dx dy dz = 3 \iiint_V dx dy dz = 3V.$$

Quyidagi 1 - tur sirt integrallarini hisoblang

207. $\iint_S xyz ds$ bunda $S: z = x^2 + y^2$ sirtning $z = 0$ va $z = 1$

tekisliklar orasidagi qismi.

yon sirti.

Quyidagi 2 - tur sirt integrallarini hisoblang

212. $\iint_S yz dy dz + xz dx dz + xy dx dy$ bunda $S: x = 0$, $y = 0$, $z = 0$, $x + y + z = a$

tekisliklar bilan chegaralangan tetraedrning tashqi qismi.

213. $\iint_S z dx dz$ bunda $S: \frac{x^2}{a^2} + \frac{y^2}{a^2} - \frac{z^2}{b^2} = 0$, konusning yon sirti.

214. $\iint_S x^2 dy dz + y^2 dx dz + z^2 dx dy$ bunda $S: x^2 + y^2 + z^2 = a^2, z > 0$

yarim sferaning tashqi sirti.

215. $\iint_S x dy dz + y dx dz + z dx dy$ bunda

$S: x=0, y=0, z=0, x=1, y=1, z=1$ kubning tashqi qismi.

216. $az = x^2 + y^2, 0 \leq z \leq a$ parabolik sirting og'irlik markazi koordinatalarini toping.

217. $z = \sqrt{x^2 + y^2}, 0 \leq z \leq h$ konusning yon sirtini inersiya momentini toping.

Stoks formulasiga doir misollar

218. $\oint_C (y-z)dx + (z-x)dy + (x-y)dz$ bunda $S: x^2 + y^2 = 1$ shar va $x+y=1$ tekislik.

219. $\oint_C (y-z)dx + (z-x)dy + (x-y)dz$ bunda $S: x^2 + y^2 = 1$ ellips va $x+z=1$ tekislik.

220. $\oint_C x dx + (y+x)dy + (x+y+z)dz$ bunda $S: x = a \sin t, y = a \cos t, z = a(\sin t + \cos t), 0 \leq t \leq 2\pi$ egri chiziq.

Ostrogradskiy-Gauss formulasiga doir misollar

221. $\iint_S x^2 dy dz + y^2 dx dz + z^2 dx dy$ bunda

$S: 0 \leq x \leq a, 0 \leq y = a, 0 \leq z \leq a$ kubning tashqi sirti.

222. $\iint_S x dy dz + y dx dz + z dx dy$ bunda $S: x+y+z=a, x=0, y=0, z=0$

tekisliklar bilan chegaralangan piramidaning tashqi sirti.

223. $\iint_S x^3 dy dz + y^3 dx dz + z^3 dx dy$ bunda $S: x^2 + y^2 + z^2 = a^2$ sferaning tashqi sirti.

III BOB. MAYDONLAR NAZARIYASI ELEMENTLARI

15-§. Skalyar maydon. Yo‘nalish bo‘yicha hosila. Gradiyent. Yuksaklik chiziqlari va sirtlari. Orijentirlangan sirt

Fizik masalalarni hal qilishda asosan ikki xil kattaliklar bilan ishlashga to‘g‘ri keladi. Bu kattaliklar skalyar va vektor kattaliklar. Statik maydonda u kattalik M nuqtaning fazodagi o‘rni bilan aniqlanadi.

$u = u(M) = u(x, y, z) = u(\vec{r})$, \vec{r} – M nuqtaning radius vektori.

$u(x, y, z)$ funksiyadan \vec{l} – vektor yo‘nalishidagi hosila quyidagi formula bilan topiladi:

$$\frac{\partial u}{\partial \vec{l}} = \frac{\partial u}{\partial x} \cos \alpha + \frac{\partial u}{\partial y} \cos \beta + \frac{\partial u}{\partial z} \cos \gamma. \quad (1)$$

Bunda $\alpha = \angle(\vec{l}, Ox)$, $\beta = \angle(\vec{l}, Oy)$, $\gamma = \angle(\vec{l}, Oz)$ hosil qilgan burchaklari.

$u(x, y, z)$ funksiyaning gradiyenti va uning uzunligi quyidagi formula bilan topiladi:

$$gradu = \frac{\partial u}{\partial x} \vec{i} + \frac{\partial u}{\partial y} \vec{j} + \frac{\partial u}{\partial z} \vec{k}. \quad (2)$$

$$|gradu| = \sqrt{\left(\frac{\partial u}{\partial x}\right)^2 + \left(\frac{\partial u}{\partial y}\right)^2 + \left(\frac{\partial u}{\partial z}\right)^2} \quad (3)$$

(3) formula eng katta o‘zgarish tezligi deyiladi.

$u = F(x, y)$ tenglama biror sohadagi har bir (x, y) nuqtasida u ni aniqlab beradi, bunday aniqlangan soha skalyar u ning maydoni deyiladi.

$u_1 = F(x, y)$, $u_2 = F(x, y), \dots$ lardagi u_1, u_2, \dots lar o‘zgarmas bo‘lganda chiqiqlarning har biri bo‘yicha skalyar u o‘zgarmas bo‘lib, u faqat (x, y) nuqta bir chiziqdandan ikkinchi chiziqqa o‘tgandagina o‘zgaradi. Bu chiziqlar yuksaklik chiziqlari yoki izochiziqlar deyiladi.

$u = F(x, y, z)$ tenglama uch o‘lchovli fazoning biror qismida skalyar u ning maydoni deyiladi. U holda **izosirtlar** yoki **yuksaklik sirtlari** tenglamalar $u_1 = F(x, y, z)$, $u_2 = F(x, y, z), \dots$ lardan iborat bo‘ladi.

(x, y, z) nuqta $x = x_0 + l \cos \alpha$, $y = y_0 + l \cos \beta$, $z = z_0 + l \cos \gamma$ lar to‘g‘ri chiziq bo‘yicha $\frac{dl}{dt} = 1$ tezlik bilan harakat qilsin. U holda $u = F(x, y, z)$ skalyar

$$v = \frac{du}{dt} = \frac{du}{dl} = \frac{\partial F}{\partial x} \cos \alpha + \frac{\partial F}{\partial y} \cos \beta + \frac{\partial F}{\partial z} \cos \gamma = N \cdot l_0$$

tezlik bilan o‘zgaradi, bundagi $N \left(\frac{\partial F}{\partial x}; \frac{\partial F}{\partial y}; \frac{\partial F}{\partial z} \right)$ izosirtning normal vektori bo‘lib, $l_0(\cos \alpha; \cos \beta; \cos \gamma)$ yo‘nalishning birlik vektoridan iborat.

Ta’rif. Maydon skalyari bir xil qiymatlarga erishadigan maydon nuqtalari to‘plamiga shu maydonning sath sirtlari (yoki ekvipotensial sirtlar) deyiladi.

Agar sirtning tomoni tanlangan bo‘lsa u holda sirt **oriyentirlangan** deyiladi.

224. $u = x^4yz^2 + x^3 - y^2 + 2z$ funksiyani $M(2; -3; 4)$ nuqtadagi $\bar{l}(-3; 0; 4)$ vektor yo‘nalishi bo‘yicha hosilasini toping.

Yechish. $\frac{\partial u}{\partial x} = 4x^3yz^2 + 3x^2$, $\frac{\partial u}{\partial y} = x^4z^2 - 2y$, $\frac{\partial u}{\partial z} = 2x^4yz + 2$

$$\left. \frac{\partial u}{\partial x} \right|_{M_1} = -1524, \quad \left. \frac{\partial u}{\partial y} \right|_{M_1} = 262, \quad \left. \frac{\partial u}{\partial z} \right|_{M_1} = -382.$$

$\bar{l}(-3; 0; 4)$ vektoring yo‘naltiruvchi kosinuslarini topamiz:

$$\cos \alpha = \frac{a_x}{|\bar{a}|} = \frac{-3}{\sqrt{9+0+16}}, \quad \cos \beta = \frac{a_y}{|\bar{a}|} = 0, \quad \cos \gamma = \frac{a_z}{|\bar{a}|} = \frac{4}{5}.$$

(1) formulaga asosan:

$$\frac{\partial u}{\partial l} = -1524 \cdot \left(-\frac{3}{5} \right) + 262 \cdot 0 - 382 \cdot \frac{4}{5} = \frac{3044}{5}.$$

225. $z = \operatorname{arctg}(x+y)$ skalyar maydonning $M_2(1; 2)$ nuqtadagi $y = 2x^2$ parabolada yotuvchi, shu parabola yo‘nalishidagi hosilani toping.

Yechish. Parabola $M_2(1;2)$ nuqtada Ox o'q bilan α burchak tashkil qilsin. U holda

$$\operatorname{tg} \alpha = y'(x_2) = 4, \cos \alpha = \frac{1}{\sqrt{1+\operatorname{tg}^2 \alpha}} = \frac{1}{\sqrt{1+16}} = \frac{1}{\sqrt{17}},$$

$$\cos \beta = \cos\left(\frac{\pi}{2} - \alpha\right) = \sin \alpha = \sqrt{1 - \cos^2 \alpha} = \sqrt{1 - \frac{1}{17}} = \frac{4}{\sqrt{17}},$$

$$\left.\frac{\partial z}{\partial x}\right|_{M_2} = \frac{1}{1+(x^2+y^2)} = \frac{1}{10}, \quad \left.\frac{\partial z}{\partial y}\right|_{M_2} = \frac{1}{1+(x^2+y^2)} = \frac{1}{10},$$

$$\left.\frac{\partial z}{\partial l}\right|_{M_2} = \frac{1}{10} \frac{1}{\sqrt{17}} + \frac{1}{10} \frac{4}{\sqrt{17}} = \frac{5}{10\sqrt{17}} = \frac{\sqrt{17}}{34}.$$

226. $u = x^2y^2z^2 - \ln(z+1)$ skalyar maydonning $M_3(-1;1;2)$ nuqtadagi eng katta o'zgarish tezligini toping.

$$\text{Yechish. } \left.\frac{\partial u}{\partial x}\right|_{M_3} = \left.(2xy^2z^2)\right|_{M_3} = -8, \quad \left.\frac{\partial u}{\partial y}\right|_{M_3} = \left.(2x^2yz^2)\right|_{M_3} = 8,$$

$$\left.\frac{\partial u}{\partial z}\right|_{M_3} = \left.(2x^2y^2z - \frac{1}{z+1})\right|_{M_3} = \frac{11}{3},$$

$$gradu = -8\bar{i} + 8\bar{j} + \frac{11}{3}\bar{k},$$

$$|gradu| = \sqrt{64 + 64 + \frac{121}{9}} = \frac{\sqrt{1273}}{3}.$$

227. $u = x^2 + y^2 + 2y$ yassi skalyar maydonning sath chiziqlarini toping.

Yechish. Maydonning satr chiziqlari $x^2 + y^2 + 2y = C$ tenglama bilan ifodalanadi. Bu tenglamadan ko'rindaniki, satr chiziqlari $C \geq -1$ bo'lganda, markazi $(0, -1)$ nuqtada bo'lgan konsentrik aylanalardan iborat bo'ladi.

228. $u = e^{\langle \vec{a}, \vec{r} \rangle}$ skalyar maydonning sath sirt tenglamasini toping. Bunda \vec{a} – o'zgarmas vektor, \vec{r} – nuqtaning radius vektori.

Yechish. Masala shartidan $\vec{a} = a_1\vec{i} + a_2\vec{j} + a_3\vec{k}$, $\vec{r} = x\vec{i} + y\vec{j} + z\vec{k}$ ga teng. Ularning skalyar ko'paytmasi esa

$$\langle \vec{a}, \vec{r} \rangle = a_1x + a_2y + a_3z.$$

Demak, sath sirt tenglamasi quyidagi ko'rinishda bo'ladi:

$$e^{\langle \vec{a}, \vec{r} \rangle} = C, \quad C > 0.$$

Bundan

$$(\vec{a} \cdot \vec{r}) = \ln C \Rightarrow a_1x + a_2y + a_3z = \ln C$$

ni olamiz. Bu parallel tekisliklar oilasini beradi.

Funksiyalarning berilgan yo'nalish bo'yicha hosilasini toping

229. 1) $z = x^2 + xy^2$, $\vec{M}_0\vec{M}_1$ vektor yo'nalishida, bunda $M_0(1; 2)$, $M_1(3; 0)$.

2) $u = xy + yz + xz$, $\vec{M}_0\vec{M}_1$ vektor yo'nalishida, bunda $M_0(1; 2; 3)$, $M_1(5; 5; 15)$.

3) $z = \ln(3x^2 + 2y^2)$, $\vec{a}(3; 1)$ vektor yo'nalishida, bunda $M_0(-1; 2)$.

230 $z = x^2 + y^2 + z^2$, $\vec{a}\left(\frac{1}{2}, \frac{1}{2}, \frac{\sqrt{2}}{2}\right)$ vektor yo'nalishida, bunda $M_0(1; 1; 1)$.

231. $u = x^e$, $\vec{a}(2; 2; -1)$ vektor yo'nalishida, bunda $M_0\left(e; 2; \frac{1}{2}\right)$.

232*. $u = z \ln(x^2 + y^2 - z)$, $x = 2 \cos t$, $y = 2 \sin t$, $z = 3$, $0 \leq t \leq 2\pi$ aylana yo'nalishida, bunda $M_0(1; -\sqrt{3}; 3)$.

Funksiyalarning M_0 nuqtadagi eng katta o'zgarish tezligini toping

233. $u = x^2yz - xyz^2 + xyz^2$, $M_0(-2; 1; 0)$.

234. $u = \ln(1 + x + y^2 + z^2)$, $M_0(1; 1; 1)$.

235 $u = e^{xy^2}$, $M_0(-1; 4; -2)$.

232*. $u = x^2 \operatorname{arctg}(3y - z)$, $M_0(2; 1; 3)$.

16-§. Vektor maydon. Vektor chiziqlari. Vektor maydon divergensiyasi. Ostrogradskiy-Gauss formulası

Har bir M nuqtasiga biror \vec{a} vektor mos qo'yilgan fazo **vektor fazo** deyiladi.

Har bir nuqtasida urinmaning yo'nalishi shu nuqtadagi \vec{a} vektor yo'nalishi bilan bir xil bo'lgan chiziqqa $\vec{a}(M)$ vektor maydonning **vektor chizig'i** deyiladi.

$\vec{a} = P(x, y, z)\vec{i} + Q(x, y, z)\vec{j} + R(x, y, z)\vec{k}$ vektor maydonning vektor chizig'i

$$\frac{dx}{P(x, y, z)} = \frac{dy}{Q(x, y, z)} = \frac{dz}{R(x, y, z)} \quad (4)$$

formula bilan topiladi.

Vaqt birligi ichida butun σ sirt bo'yicha oqib o'tayotgan suyuqlik umumiy miqdorining taqrifiy qiymati, quyidagi yig'indiga teng bo'ladi:

$$\Pi = \sum_{i=1}^n \vec{a}(M_i) \cdot \vec{n}_i^0 \cdot \Delta\sigma_i. \quad (5)$$

(5) yig'indidan olingan limit, 2-tur sirt integrali bo'lib, vektor maydonning σ sirt oqimi deb ataladi va quyidagi ko'rinishda bo'ladi:

$$\Pi = \lim_{\max \Delta\sigma_i \rightarrow 0} \sum_{i=1}^n \vec{a}(M_i) \cdot \vec{n}_i^0 \cdot \Delta\sigma_i = \iint_{\sigma} \vec{a} \cdot \vec{n}^0 \cdot d\sigma. \quad (6)$$

Bunda \vec{n}^0 sirtga musbat oriyentirlangan birlik vektor.

$$\vec{n}_i^0(\cos\alpha; \cos\beta; \cos\gamma), \quad \vec{a}[P(x, y, z); Q(x, y, z); R(x, y, z)]$$

larni skalyar ko'paytmasini e'tiborga olsak, (6) formulani quyidagicha yozish mumkin:

$$\Pi = \iint_{\sigma} P(x, y, z) dy dz + Q(x, y, z) dx dz + R(x, y, z) dx dy,$$

yoki

$$\Pi = \iint_{\sigma} [P(x, y, z) \cos\alpha + Q(x, y, z) \cos\beta + R(x, y, z) \cos\gamma] d\sigma. \quad (7)$$

σ sirt yopiq bo'lganda, (7) formula quyidagicha yoziladi:

$$\Pi = \iint_{\sigma} \vec{a} \cdot \vec{n}^0 d\sigma.$$

$$div \vec{a}(M) = \frac{\partial P}{\partial x} + \frac{\partial Q}{\partial y} + \frac{\partial R}{\partial z}, \quad (8)$$

$$\iint_{\sigma} P dy dz + Q dx dz + R dx dy = \iiint_V \left(\frac{\partial P}{\partial x} + \frac{\partial Q}{\partial y} + \frac{\partial R}{\partial z} \right) dx dy dz. \quad (9)$$

$$\iint_{\sigma} \vec{a} \cdot \vec{n}^0 d\sigma = \iiint_V div \vec{a}(M) d\sigma.$$

(8) \vec{a} vektor maydon divergensiysi formulasи.

(9) Ostragradskiy-Gauss formulasining vektor ko'rinishi.

Vektor maydonda L yopiq kontur bo'lsin, $\vec{r} = x\vec{i} + y\vec{j} + z\vec{k}$ nuqtadagi radius vektor bo'lsin. $\vec{a}(M)$ vektor maydonning L yopiq kontur bo'yicha sirkulatsiyasi deb quyidagi formulaga aytildi:

$$L = \oint_L \vec{a} d\vec{r}. \quad (10)$$

Ushbu

$$L = \oint_L a_i dl = \oint_L P dx + Q dy + R dz.$$

ko'rinishi ham bor.

$\vec{a} = P(x, y, z)\vec{i} + Q(x, y, z)\vec{j} + R(x, y, z)\vec{k}$ vektor maydonning **uyurmasi (rotori)** quyidagi formula bilan aniqlangan vektorga aytildi:

$$\text{rot}\vec{a}(M) = \left(\frac{\partial R}{\partial y} - \frac{\partial Q}{\partial z} \right) \vec{i} + \left(\frac{\partial P}{\partial z} - \frac{\partial R}{\partial x} \right) \vec{j} + \left(\frac{\partial Q}{\partial x} - \frac{\partial P}{\partial y} \right) \vec{k}. \quad (11)$$

Stoks formulasining vektor shakli quyidagi ko'rinishda bo'ladi:

$$\begin{aligned} & \oint_L P(x, y, z) dx + Q(x, y, z) dy + R(x, y, z) dz = \\ & = \iint_{\sigma} \left(\frac{\partial Q}{\partial x} - \frac{\partial P}{\partial y} \right) dx dy + \left(\frac{\partial R}{\partial y} - \frac{\partial Q}{\partial z} \right) dy dz + \left(\frac{\partial P}{\partial z} - \frac{\partial R}{\partial x} \right) dx dz. \end{aligned} \quad (12)$$

(12) formulani quyidagi ko'rinishga keltirish mumkin:

$$L = \oint_L a_i dl = \iint_{\sigma} \vec{n} \cdot \text{rot}\vec{a} d\sigma. \quad (13)$$

237. $\vec{a} = -y\vec{i} + x\vec{j} + b\vec{k}$ vektor maydonning $M(1;0;0)$ nuqtadan o'tuvchi vektor chiziqlarini toping.

Yechish. (4) formulaga asosan: $\frac{dx}{-y} = \frac{dy}{x} = \frac{dz}{b}$ yoki $\begin{cases} xdx = -ydy \\ bdy = xdz \end{cases}$

Birinchi tenglamaning yechimi $x^2 + y^2 = C_1$, yoki parametrik holda

$$x = C_1 \cos t, \quad y = C_1 \sin t.$$

Ikkinchi tenglamadan $bC_1 \cos t = C_1 \cos t dz$, $bt = C_1 dz$, $z = bt + C_2$.

Demak, sistemaning yechimi

$$\begin{cases} x = C_1 \cos t, \\ y = C_1 \sin t, \\ z = bt + C_2. \end{cases}$$

$M(1;0;0)$ nuqtadan o'tuvchi vektor chiziqlarini topamiz, buning uchun $t=0$ bo'lishi kerak, ya'ni

$$\begin{cases} 1 = C_1, \\ 0 = 0, \\ 0 = 0 + C_2, \end{cases} \Rightarrow \begin{cases} C_1 = 1, \\ C_2 = 0, \\ z = bt. \end{cases} \Rightarrow \begin{cases} x = \cos t, \\ y = \sin t, \\ z = bt. \end{cases}$$

bu esa izlangan vektor chiziq bo'ladi.

238. I tok kuchi o'tuvchi cheksiz o'tkazgichli magnit maydonning vektor chiziqlarini toping.

Yechish. Oz o'qi yo'nalishini I tok yo'nalishi bilan bir xil qilib tanlaymiz. Bunda magnit maydon kuchlanganligi $H = \frac{2}{\rho^2} \bar{I} \times \bar{r}$

kabi aniqlanadi, bunda tok $\bar{I} = I \hat{k}$ vektori; $\bar{r} = M(x, y, z)$ nuqtaning radius vektori; ρ o'tkazgich o'qidan M nuqtagacha bo'lgan masofa. Bundan:

$$\bar{I} \times \bar{r} = I \hat{k} \times \bar{r} = \begin{vmatrix} \bar{i} & \bar{j} & \bar{k} \\ 0 & 0 & I \\ x & y & z \end{vmatrix} = -y \bar{i} + x \bar{j}, \Rightarrow H = \frac{2I}{\rho^2} (-y \bar{i} + x \bar{j}).$$

Vektor chiziqlarning differensial tenglamalari sistemasini tuzamiz:

$$\frac{dx}{-y} = \frac{dy}{x} = \frac{dz}{0}.$$

Bundan

$$\begin{cases} x dx + y dy = 0, \\ dz = 0, \end{cases} \Rightarrow \begin{cases} x^2 + y^2 = C_1, \\ z = C_2. \end{cases}$$

Demak, cheksiz o'tkazgichli magnit maydonning vektor chiziqlari markazlari Oz o'qida joylashgan aylanalardan iborat ekan.

239. $\bar{a} = 2x \bar{i} - (z-1) \bar{k}$ vektor maydonning $\sigma: x^2 + y^2 = 4, z = 0, z = 1$ sirdan tashqi tomonga o'tuvchi oqimini toping.

Yechish. \bar{a} vektor maydon o'qimi $\Pi = \Pi_1 + \Pi_2 + \Pi_3$, ga teng. Bundan:

$$\Pi_1 = \iint_{\sigma_1} \bar{a} \cdot \bar{n}_1^0 d\sigma = \iint_{\sigma_1} (z-1) d\sigma = \iint_{\sigma_1} (0-1) d\sigma = - \iint_{\sigma_1} d\sigma = 4\pi,$$

$$\Pi_2 = \iint_{\sigma_2} \bar{a} \cdot \bar{n}_2^0 d\sigma = - \iint_{\sigma_2} (z-1) d\sigma = - \iint_{\sigma_2} (1-1) d\sigma = 0,$$

$$\Pi_1 = \iint_{\sigma} \vec{a} \cdot \vec{n} d\sigma = \iint_{\sigma} x^2 d\sigma = \int_0^{2\pi} \int_0^{\frac{\pi}{2}} 4 \cos^2 \theta d\theta \int_0^{\frac{\pi}{2}} r dr = 4 \int_0^{\frac{\pi}{2}} \frac{1 + \cos 2\theta}{2} = 8\pi.$$

Demak, $\Pi = -4\pi + 0 + 8\pi = 4\pi$.

240. $\vec{a} = xz^2 \vec{i} + yx^2 \vec{j} + zy^2 \vec{k}$ vektor maydonning $x^2 + y^2 + z^2 = R^2$ sferadan tashqi tomonga o'tuvchi oqimini toping.

Yechish. Oqimni Ostragradskiy-Gauss (9) formulasidan topamiz:

$$\Pi = \iiint_V \operatorname{div} \vec{a} dV = \iiint_V (z^2 + y^2 + x^2) dx dy dz.$$

sferik koordinatalarga o'tamiz

$$\begin{aligned} \iiint_V r^4 \sin \theta dr d\varphi d\theta &= \int_0^R r^4 dr \int_0^\pi \sin \theta d\theta \int_0^{2\pi} d\varphi = \\ &= \int_0^R r^4 dr \left[\sin \theta \right]_0^{2\pi} d\theta = -2\pi \int_0^R r^4 \cos \theta \Big|_0^{2\pi} dr = 4\pi \left. \frac{r^5}{5} \right|_0^R = \frac{4R^5 \pi}{5}. \end{aligned}$$

241. $\vec{a} = y\vec{i} - x\vec{j} + z\vec{k}$ vektor maydonning $x^2 + y^2 = 1, z = 0$ aylananing musbat yo'nalishi bo'yicha sirkulatsiyasini toping.

Yechish. L chiziqni parametrik ko'rinishda yozamiz. U holda:

$$x = \cos t, \quad y = \sin t, \quad z = 0, \quad dx = -\sin t dt, \quad dy = \cos t dt, \quad dz = 0.$$

$$U = \oint_L y dx - x dy + az = \int_0^{2\pi} \left[\sin t (-\sin t) - \cos t \cos t \right] dt = - \int_0^{2\pi} dt = -2\pi.$$

242. $\vec{a} = y\vec{i} - x\vec{j} + a\vec{k}, a = \text{const}$ vektor maydonning sirkulatsiyasini $x^2 + y^2 = 1, z = 0$ aylananing musbat yo'nalishi bo'yicha toping.

Yechish. Masala shartidan: $P = y, Q = -x, R = a$. (11) formulaga asosan:

$$\operatorname{rot} \vec{a}(M) = \left(\frac{\partial a}{\partial y} - \frac{\partial x}{\partial z} \right) \vec{i} + \left(\frac{\partial y}{\partial z} - \frac{\partial a}{\partial x} \right) \vec{j} + \left(-\frac{\partial x}{\partial y} - \frac{\partial y}{\partial x} \right) \vec{k} = -2\vec{k}.$$

Aylananing musbat yo'nalishi $\vec{n} = \vec{k}$ normal bilan aniqlanadi. Vektor maydonning sirkulatsiyasini (13) formula bilan topamiz:

$$\begin{aligned} U &= \iint_{\sigma} \vec{n} \cdot \operatorname{rot} \vec{a} d\sigma = -2 \iint_{\sigma} \vec{n} \cdot \vec{k} d\sigma = -2 \iint_{\sigma_0} dx dy = -2 \int_0^{2\pi} d\varphi \int_0^1 r dr = \\ &= - \int_0^{2\pi} r^2 \Big|_0^1 d\varphi = - \int_0^{2\pi} d\varphi = -\varphi \Big|_0^{2\pi} = -2\pi. \end{aligned}$$

Vektor maydonlarning vektor chiziqlarini toping

243. $\vec{a} = x\vec{i} + y\vec{j} + z\vec{k}$.

244. $\vec{a} = 2xy\vec{i} + 2y\vec{j} + 3z\vec{k}$.

245. $\vec{a} = 2z\vec{i} - 3x\vec{k}$.

Vektor maydonlarning oqimini toping

246. $\vec{a} = x\vec{i} + y\vec{j} + z\vec{k}$ ning $x^2 + y^2 + z^2 = R^2$ sferadan tashqi tomonga o'tuvchi.

247. $\vec{a} = xz\vec{i}$ ning $x^2 + y^2 + z = 1$ paraboloidning tashqi tomonga o'tuvchi.

Vektor maydonlarning oqimini Ostragradskiy-Gauss formulasi yordamida toping

248. $\vec{a} = 4x^3\vec{i} + 4y^3\vec{j} - 6z^4\vec{k}$ ning $x^2 + y^2 = 9$ silindrning $z = 0$ va $z = 2$ tekisliklar orasidagi sirtdan tashqi tomonga o'tuvchi.

249. $\vec{a} = xz^2\vec{i} + yx^2\vec{j} + zy^2\vec{k}$ ning $x^2 + y^2 + z^2 = R^2$ sferadan tashqi tomonga o'tuvchi.

250. $\vec{a} = x\vec{i} + y\vec{j} + z\vec{k}$ ning $x^2 + y^2 = R^2$, $(-H \leq z \leq H)$ silindrik sirtdan tashqi tomonga o'tuvchi.

251. $\vec{a} = x\vec{i} + y\vec{j} + z\vec{k}$ ning $z = 1 - \sqrt{x^2 + y^2}$, $z = 0$, $(0 \leq z \leq 1)$ yopiq sirtdan tashqi tomonga o'tuvchi.

Vektor maydonlarning berilgan nuqtadagi divergensiyasini toping

252. $\text{grad } \vec{a} / \sqrt{x^2 + y^2 + z^2}$, $M_0(2; -1; 2)$.

253. $\vec{a} \times \vec{b}$, $\vec{a} = x\vec{i} + y\vec{j} + z\vec{k}$, $\vec{b} = y\vec{i} + z\vec{j} + x\vec{k}$, $M_0(3; 1; -2)$.

Vektor maydonlarning oqimini Ostragradskiy-Gauss formulasi yordamida toping

254. $\vec{a} = (x+z)\vec{i} + (x-y)\vec{j} + x\vec{k}$, $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$ ellips bo'yicha.

255. $\vec{a} = -y\vec{i} + x\vec{j} + 5\vec{k}$, $x^2 + y^2 = 1$, $z = 0$ aylana bo'yicha.

256. $\vec{a} = x^2y^3\vec{i} + 2\vec{j} + z^2\vec{k}$, $x^2 + y^2 + z^2 = 4$ sferaning $z = 0$ tekislik bilan kesishish chizig'i bo'yicha.

257. $\vec{a} = z\vec{i} + 2yz\vec{j} + y^2\vec{k}$, $x^2 + 9y^2 = 9 - z$ sirtning koordinata tekisligi bilan kesishish chizig'i bo'yicha.

Vektor maydon uyurmasining berilgan nuqtadagi kattaligini toping

$$258. \vec{a} = z^2\vec{i} + x^2\vec{j} + y^2\vec{k}, M_0(-1; 2; 2).$$

$$259. \vec{a} = xyz\vec{i} + (x+y+z)\vec{j} + (x^2 + y^2 + z^2)\vec{k}, M_0(1; 2; -3).$$

17-§. Vektor maydonning asosiy sinflari

Gamilton operatori deb quyidagi 1-tartibli differensialga aytildi:

$$\nabla = \frac{\partial}{\partial x}\vec{i} + \frac{\partial}{\partial y}\vec{j} + \frac{\partial}{\partial z}\vec{k}, \quad (14)$$

∇ -nabla.

$$\begin{aligned} \nabla u &= \frac{\partial u}{\partial x}\vec{i} + \frac{\partial u}{\partial y}\vec{j} + \frac{\partial u}{\partial z}\vec{k} = \text{grad } u. \\ \nabla \vec{a}(M) &= \left(\frac{\partial}{\partial x}\vec{i} + \frac{\partial}{\partial y}\vec{j} + \frac{\partial}{\partial z}\vec{k} \right) (P\vec{i} + Q\vec{j} + R\vec{k}) = \\ &= \frac{\partial P}{\partial x} + \frac{\partial Q}{\partial y} + \frac{\partial R}{\partial z} = \text{div } \vec{a}(M). \end{aligned}$$

$$\text{div}(\text{grad } u) = \nabla(\nabla u) = (\nabla \nabla)u = \frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} + \frac{\partial^2 u}{\partial z^2} = \Delta u. \quad (15)$$

(15) Laplas operatori.

Har bir nuqtasida divergensiysi nolga teng bo'lgan maydon solitonli maydon yoki nayli maydon deyiladi.

Yopiq sirt uchun $\iint_{\Omega} \vec{a} \cdot \vec{n}_i d\sigma = \iint_{\Omega} \vec{a} \cdot \vec{n}_i d\sigma$ tenglik o'rinni bo'ladi.

Har bir nuqtasida uyurmasi nolga teng bo'lgan maydonga potensiali (uyurmasiz, gradiyentli) maydon deyiladi.

$\vec{a} = \text{grad } u$ bo'lsa $u(x, y, z)$ funksiyani quyidagicha aniqlanadi:

$$\begin{aligned} u(x, y, z) &= \int_{M_0}^M P(x, y, z) dx + Q(x, y, z) dy + R(x, y, z) dz = \\ &= \int_{x_0}^x P(x, y_0, z_0) dx + \int_{y_0}^y Q(x, y, z_0) dy + \int_{z_0}^z R(x, y, z) dz + C. \end{aligned} \quad (16)$$

Bir vaqtning o'zida potensiali va solenoidli bo'lgan maydon garmonik maydon (Laplas maydoni) deyiladi. Bu shartni bajaruvchi $u(x, y, z)$ funksiya garmonik funksiya deyiladi.

$$\Delta u = \frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} + \frac{\partial^2 u}{\partial z^2} = 0. \quad (17)$$

260. Qanday shartlar bajarilganda $\vec{a} = \varphi(r) \cdot \vec{r}$ maydon solinoidli bo'ladi?

Yechish. Solinoidli bo'lishi uchun $\operatorname{div} \vec{a} = 0$, \vec{a} vektorning divergensiyasini topamiz:

$$\operatorname{div} \vec{a} = \operatorname{div}(\varphi(r) \cdot \vec{r}) = \operatorname{div} \varphi(r) \cdot \vec{r} + \varphi(r) \operatorname{div}(\vec{r}) = 3\varphi(r) + \varphi'(r)r = 0,$$

$$3\varphi(r) + \varphi'(r)r = 0, \quad \varphi'(r)r = -3\varphi(r), \quad \frac{d\varphi}{dr} = -3 \frac{\varphi(r)}{r}, \quad \frac{d\varphi}{\varphi} = -3 \frac{dr}{r},$$

$$\ln|\varphi| = \ln C - 3 \ln r, \quad \ln|\varphi| = \ln \frac{C}{r^3}, \quad \varphi(r) = \frac{C}{r^3}.$$

261. $\vec{a} = x^2 \vec{i} + y^2 \vec{j} + z^2 \vec{k}$ maydon potensialli ekanini ko'rsating va uning potensialini aniqlang.

Yechish. Potensialli bo'lishi uchun $\operatorname{rot} \vec{a} = 0$, \vec{a} vektorning rotorini topamiz:

$$\operatorname{rot} \vec{a} = \begin{vmatrix} \vec{i} & \vec{j} & \vec{k} \\ \frac{\partial}{\partial x} & \frac{\partial}{\partial y} & \frac{\partial}{\partial z} \\ x^2 & y^2 & z^2 \end{vmatrix} = \frac{\partial}{\partial y} x^2 \vec{i} + \frac{\partial}{\partial z} x^2 \vec{j} + \frac{\partial}{\partial x} y^2 \vec{k} - \frac{\partial}{\partial y} x^2 \vec{k} - \frac{\partial}{\partial z} y^2 \vec{i} - \frac{\partial}{\partial x} z^2 \vec{j} = 0.$$

Demak, potensialli ekan. $M_0(x_0, y_0, z_0)$ va $M(x, y, z)$ nuqtani ko'rinishda tanlasak, (16) dan:

$$u(x, y, z) = \int_0^x x^2 dx + \int_0^y y^2 dy + \int_0^z z^2 dz = \frac{1}{3}(x^3 + y^3 + z^3) + C.$$

Maydonlarning solinoidli bo'lishi yoki bo'lmasligini aniqlang

$$262. \vec{a} = (6x - 7yz)\vec{i} + (6y - 7xz)\vec{j} + (6z - 7xy)\vec{k}.$$

$$263. \vec{a} = (4x - 8yz)\vec{i} + (-4y - 8xz)\vec{j} + 8xy\vec{k}.$$

$$264. \vec{a} = (-2x + yz)\vec{i} + (-2y + xz)\vec{j} + (-2z + xy)\vec{k}$$

$$265. \vec{a} = (5x - 6yz)\vec{i} + (7y - xz)\vec{j} + (-12z - xy)\vec{k}.$$

Vektor maydon potensialini toping

$$266. \vec{a} = (2xz - 3y^2)\vec{i} + (2z^2 - 6xy)\vec{j} + (x^2 + 4yz)\vec{k}.$$

$$267. \vec{a} = (z^2 + 6xy)\vec{i} + (3x^2 - 4yz)\vec{j} + (2xz - 2y^2)\vec{k}.$$

$$268. \vec{a} = (2z - 2x)\vec{i} - 2y\vec{j} + 2x\vec{k}$$

$$269. \vec{a} = (2x - y)\vec{i} - (z + x)\vec{j} - y\vec{k}.$$

α, β, γ ning qanday qiymatlarida maydon

1) solinoidli 2) potensialli 3) garmonik bo'ldi?

$$270. \vec{a} = (\alpha x + \beta y + 7)\vec{i} + (\gamma x + \alpha y)\vec{j} + (\beta x + z)\vec{k}.$$

$$271. \vec{a} = \beta x\vec{i} + (\alpha x + 3y - z)\vec{j} + \gamma y\vec{k}.$$

$$272. \vec{a} = (\alpha x + \gamma z)\vec{i} + (2\alpha y + 3z)\vec{j} + (x + \beta y + z)\vec{k}.$$

$$273. \vec{a} = (\gamma x - 2\beta z - 2y)\vec{i} + (\alpha x - y)\vec{j} + (x - z)\vec{k}.$$

IV BOB. SONLI VA FUNKSIONAL QATORLAR

18-§. Asosiy ta'riflar, qator yaqinlashishining zaruriy sharti

1. Sonli qatorlar haqida asosiy tushunchalar

1-ta'rif. $u_1, u_2, u_3, \dots, u_n, \dots$ sonlar ketma-ketligidan tuzilgan

$$u_1 + u_2 + u_3 + \dots + u_n + \dots = \sum_{n=1}^{\infty} u_n \quad (1)$$

cheksiz yig'indiga sonli qator deyiladi. $u_1, u_2, u_3, \dots, u_n, \dots$ larga qatorning hadlari, u_n ga esa n -hadi yoki umumiy hadi deyiladi.

2. Qator yig'indisi va uning yaqinlashishi. Sonli qator ta'rifidan ma'lumki, uning hadlari cheksiz ko'p bo'lib, yig'indisini oddiy yo'l bilan qo'shib bo'lmaydi. Shuning uchun qatorning yig'indisi tushunchasini kiritamiz. (1) qator hadlaridan

$u_1 = S_1, u_1 + u_2 = S_2, u_1 + u_2 + u_3 = S_3, \dots, u_1 + u_2 + u_3 + \dots + u_n = S_n$
qismiy yig'indilar tuzamiz.

2-ta'rif. $\lim_{n \rightarrow \infty} S_n = S$ chekli limit mavjud bo'lsa, S ga qator yig'indisi deyiladi va qator yaqinlashuvchi deb ataladi. Chekli limit mavjud bo'lmasa, qatorning yig'indisi bo'lmaydi va u uzoqlashuvchi deyiladi.

3. Qator yaqinlashishining zaruriy sharti.

1-teorema. $u_1 + u_2 + \dots + u_n + \dots$ (2) qator yaqinlashuvchi bo'lsa, $\lim_{n \rightarrow \infty} u_n = 0$ shart bajariladi. Bu shart qator yaqinlashishining zaruriy sharti hisoblanadi.

Natija. Qator umumiy hadining $n \rightarrow \infty$ dagi limiti 0 ga teng bo'lmasa, u uzoqlashuvchi bo'ladi. Lekin $\lim_{n \rightarrow \infty} u_n = 0$ shartdan qatorning yaqinlashuvchiligi kelib chiqmaydi. Bu shart faqat zaruriy shart bo'lib, yetarli emas.

$$274. \frac{1}{1 \cdot 2} + \frac{1}{2 \cdot 3} + \frac{1}{3 \cdot 4} + \dots + \frac{1}{n(n+1)} + \dots \text{ qator yaqinlashishini tekshiring.}$$

Yechish. Berilgan qatorning n qismiy yig'indisi

$$\begin{aligned} S_n &= \frac{1}{1 \cdot 2} + \frac{1}{2 \cdot 3} + \frac{1}{3 \cdot 4} + \dots + \frac{1}{n(n+1)} = \\ &= \left(\frac{1}{1} - \frac{1}{2} \right) + \left(\frac{1}{2} - \frac{1}{3} \right) + \left(\frac{1}{3} - \frac{1}{4} \right) + \dots + \left(\frac{1}{n} - \frac{1}{n+1} \right) = \frac{1}{1} - \frac{1}{n+1} = 1 - \frac{1}{n+1} \end{aligned}$$

bo'lib, $\lim_{n \rightarrow \infty} S_n = \lim_{n \rightarrow \infty} \left(1 - \frac{1}{n+1} \right) = 1$. Shunday qilib, berilgan sonli qator yaqinlashuvchi va uning yig'indisi $s=1$ bo'ladi.

$$275. \frac{1}{1 \cdot 4} + \frac{1}{4 \cdot 7} + \frac{1}{7 \cdot 10} + \dots + \frac{1}{(3n-2)(3n+1)} + \dots \text{ qator yaqinlashishini tekshiring.}$$

Yechish. Bu qatorning qismiy yig'indisini hisoblab, uning limitini topamiz:

$$\begin{aligned} S_n &= \frac{1}{1 \cdot 4} + \frac{1}{4 \cdot 7} + \dots + \frac{1}{(3n-2)(3n+1)} = \frac{1}{3} \left(1 - \frac{1}{4} \right) + \frac{1}{3} \left(\frac{1}{4} - \frac{1}{7} \right) + \dots \\ &\quad + \frac{1}{3} \left(\frac{1}{3n-2} - \frac{1}{3n+1} \right) = \frac{1}{3} \left(1 - \frac{1}{3n+1} \right) \\ \lim_{n \rightarrow \infty} S_n &= \lim_{n \rightarrow \infty} \frac{1}{3} \left(1 - \frac{1}{3n+1} \right) = \frac{1}{3}. \end{aligned}$$

Demak, berilgan qator yaqinlashuvchi va uning yig'indisi $s=\frac{1}{3}$.

Quyidagi sonli qatorni yaqinlashishga tekshiring. Yaqinlashuvchi qatorlarning yig'indisini toping.

$$276. \sum_{n=1}^{\infty} \frac{1}{n(n+3)}, \quad 277. \sum_{n=1}^{\infty} \frac{1}{(2n+5)(2n+7)}, \quad 278. \sum_{n=1}^{\infty} \frac{1}{9n^2 + 21n + 10},$$

$$279. \sum_{n=1}^{\infty} \frac{1}{4n^2 + 4n - 3}, \quad 280. \sum_{n=1}^{\infty} \frac{2n+1}{n^2(n+1)^3}, \quad 281. \sum_{n=1}^{\infty} \frac{4n}{(2n-1)^2(2n+1)^2},$$

$$282. \sum_{n=1}^{\infty} (-1)^n (3n-1), \quad 283. \sum_{n=1}^{\infty} \left(\frac{7}{2} + (-1)^n \frac{3}{2} \right), \quad 284. \sum_{n=1}^{\infty} \frac{3^n + 5^n}{9n^2 + 21n + 10},$$

$$285. \sum_{n=1}^{\infty} \frac{1}{2^{n-1}}, \quad 286*. \sum_{n=1}^{\infty} \ln \left(\frac{4n-1}{3n+2} \right), \quad 287*. \sum_{n=1}^{\infty} \operatorname{arctg} \left(\frac{n+3}{n^2+1} \right).$$

19-§. Musbat hadli qatorlar yaqinlashishining taqqoslash va Dalamber alomatlari

1. Qator yaqinlashishining taqqoslash alomati

$$u_1 + u_2 + \dots + u_n + \dots \quad (2)$$

$$v_1 + v_2 + \dots + v_n + \dots \quad (3)$$

qatorlar uchun $u_1 \leq v_1, u_2 \leq v_2, \dots, u_n \leq v_n, \dots$ tengsizliklar hamma n lar uchun bajarilib, (3) qator yaqinlashuvchi bo'lsa, (2) qator ham yaqinlashuvchi bo'ladi. (2) qator uzoqlashuvchi bo'lsa, (3) qator ham uzoqlashuvchi bo'ladidi.

2. Dalamber alomati. Musbat hadli $a_1 + a_2 + \dots + a_n + a_{n+1} + \dots$ qator berilgan bo'lsin. $\lim_{n \rightarrow \infty} \frac{a_{n+1}}{a_n} = d$ limit mavjud bo'lib, $d < 1$ bo'lsa, qator yaqinlashuvchi, $d > 1$ bo'lsa, qator uzoqlashuvchi, $d = 1$ bo'lsa, qator yaqinlashuvchi ham uzoqlashuvchi ham bo'lishi mumkin, bunday hollarda qatorni boshqa alomatdan foydalanib tekshirish kerak.

288. $1 + \frac{1}{1 \cdot 2} + \frac{1}{2 \cdot 2^2} + \frac{1}{3 \cdot 2^3} + \dots + \frac{1}{n \cdot 2^n} + \dots$ qator yaqinlashishini tekshiring.

Yechish. Berilgan qatorni $1 + \frac{1}{2} + \frac{1}{2^2} + \frac{1}{2^3} + \dots + \frac{1}{2^n} + \dots$ qator bilan taqqoslaymiz. Ma'lumki, keyingi qator maxraji $q = \frac{1}{2}$ ga teng bo'lgan geometrik progressiya bo'lib, yaqinlashuvchidir. Hamma n lar uchun $\frac{1}{n \cdot 2^n} \leq \frac{1}{2^n}$ tengsizliklar bajariladi, demak, taqqoslash alomatiga asosan, berilgan qatorning ham yaqinlashuvchi ekanligi kelib chiqadi.

289. $1 + \frac{1}{2!} + \frac{1}{3!} + \dots + \frac{1}{n!} + \dots$ qator yaqinlashishini tekshiring.

Yechish. $d = \lim_{n \rightarrow \infty} \frac{1}{(n+1)!}; \frac{1}{n!} = \lim_{n \rightarrow \infty} \frac{n!}{(n+1)!} = \lim_{n \rightarrow \infty} \frac{1}{n+1} = 0 < 1$. Demak, berilgan qator Dalamber alomatiga asosan yaqinlashuvchi.

290. $1 + \frac{2}{3} + \frac{3}{5} + \dots + \frac{n}{2n-1} + \dots$ qator yaqinlashishini tekshiring.

Yechish.

$$d = \lim_{n \rightarrow \infty} \frac{n+1}{2n+1} : \frac{n}{2n-1} = \lim_{n \rightarrow \infty} \frac{(n+1)(2n-1)}{(2n+1)n} = \lim_{n \rightarrow \infty} \frac{2n^2+n-1}{2n^2+n} = \frac{2}{2} = 1.$$

Bu holda Dalamber alomati savolga javob bermaydi. Berilgan qator uchun qator yaqinlashishining zaruriy shartini tekshiraylik.

$$\lim_{n \rightarrow \infty} u_n = \lim_{n \rightarrow \infty} \frac{n}{2n-1} = \frac{1}{2} \neq 0.$$

Qator yaqinlashishining zaruriy sharti bajarilmaydi, demak, berilgan qator uzoqlashuvchi.

Qatorlarni yaqinlashishining taqqoslash alomati bilan tekshiring

$$291. 1 - 1 + 1 - 1 + \dots + (-1)^{n-1} + \dots .$$

$$292. \frac{2}{5} + \frac{1}{2} \left(\frac{2}{5} \right)^2 + \frac{1}{3} \left(\frac{2}{5} \right)^3 + \dots + \frac{1}{n} \left(\frac{2}{5} \right)^n + \dots .$$

$$293. \frac{2}{3} + \frac{3}{5} + \frac{4}{7} + \dots + \frac{n+1}{2n+1} + \dots .$$

$$294. \frac{1}{\sqrt[1]{10}} - \frac{1}{\sqrt[3]{10}} + \frac{1}{\sqrt[4]{10}} - \dots + \frac{(-1)^{n+1}}{\sqrt[n]{10}} + \dots .$$

$$295. \frac{1}{2} + \frac{1}{4} + \frac{1}{6} + \dots + \frac{1}{2n} + \dots .$$

$$296. \frac{1}{11} + \frac{1}{21} + \frac{1}{31} + \dots + \frac{1}{2n+1} + \dots .$$

$$297. \frac{1}{\sqrt{1 \cdot 2}} + \frac{1}{\sqrt{2 \cdot 3}} + \dots + \frac{1}{\sqrt{n(n+1)}} + \dots .$$

$$298. 2 + \frac{2^2}{2} + \frac{2^3}{3} - \dots + \frac{2^n}{n} + \dots .$$

$$299. 1 + \frac{1}{\sqrt{2}} + \frac{1}{\sqrt{3}} + \dots + \frac{1}{\sqrt{n}} + \dots .$$

$$300. \frac{1}{2^2} + \frac{1}{5^2} + \frac{1}{8^2} + \dots + \frac{1}{(3n-1)^2} + \dots .$$

Qatorlarni yaqinlashishning Dalamber alomati bilan tekshiring

$$301. \frac{2}{3} + \frac{4}{9} + \frac{6}{27} + \frac{8}{81} + \dots .$$

$$302. 1 + \frac{2}{2!} + \frac{4}{3!} + \frac{8}{4!} + \dots .$$

$$303. 1 + \frac{1 \cdot 2}{1 \cdot 3} + \frac{1 \cdot 2 \cdot 3}{1 \cdot 3 \cdot 5} + \dots$$

$$304. 1 + \frac{3}{2 \cdot 3} + \frac{3^2}{2^2 \cdot 5} + \frac{3^3}{2^3 \cdot 7} + \dots$$

$$305. \frac{1}{2} + \frac{3!}{2 \cdot 4} + \frac{5!}{2 \cdot 4 \cdot 6} + \frac{7!}{2 \cdot 4 \cdot 6 \cdot 8} + \dots$$

$$306. \frac{1}{\sqrt{3}} + \frac{5}{\sqrt{2 \cdot 3^2}} + \frac{9}{\sqrt{3 \cdot 3^3}} + \frac{13}{\sqrt{4 \cdot 3^4}} + \dots$$

$$307. \sum_{n=1}^{\infty} \frac{n}{2^n}, \quad 308. \sum_{n=1}^{\infty} \frac{4 \cdot 5 \cdot 6 \dots (n+3)}{5 \cdot 7 \cdot 9 \dots (2n+3)}$$

$$309. \sum_{n=1}^{\infty} \frac{n!}{e^n}, \quad 310*. \sum_{n=1}^{\infty} \frac{n^n}{n!}$$

20-§. Musbat hadli qatorlar yaqinlashishining Koshi va integral alomatlari

1. Koshi alomati. $a_1 + a_2 + \dots + a_n + \dots$ musbat hadli qator berilgan bo'lib, $\lim_{n \rightarrow \infty} \sqrt[n]{a_n} = k$ limit mavjud va $k < 1$ bo'lsa, qator yaqinlashuvchi, $k > 1$ bo'lsa, qator uzoqlashuvchi, $k = 1$ bo'lsa, qator yaqinlashuvchi ham, uzoqlashuvchi ham bo'lishi mumkin, bu holda Koshi alomati savolga javob bermaydi.

2.Qator yaqinlashishining integral alomati.

$$a_1 + a_2 + \dots + a_n + \dots, \quad a_1 > a_2 > \dots > a_n > \dots, \quad (a_n \neq 0)$$

musbat hadli qator berilgan bo'lsin. $f(n) = a_n$ natural argumentli funksiya tuzamiz. $f(n)$ uzluksiz, musbat va kamayuvchi funksiya bo'lsin. $\lim_{b \rightarrow +\infty} \int_1^b f(n) dn$ xosmas integral yaqinlashuvchi bo'lsa, berilgan qator ham yaqinlashuvchi, xosmas integral uzoqlashuvchi bo'lsa, qator ham uzoqlashuvchi bo'ladi.

$$311. \quad \sum_{n=1}^{\infty} \left(\frac{n}{2n+1} \right)^n = \frac{1}{3} + \left(\frac{2}{5} \right)^2 + \left(\frac{3}{7} \right)^3 + \dots + \left(\frac{n}{2n+1} \right)^n + \dots \quad \text{qatorning yaqinlashishini tekshiring.}$$

Yechish. Koshi alomatidan

$$k = \lim_{n \rightarrow \infty} \sqrt[n]{a_n} = \lim_{n \rightarrow \infty} \sqrt[n]{\left(\frac{n}{2n+1} \right)^n} = \lim_{n \rightarrow \infty} \frac{n}{2n+1} = \frac{1}{2} < 1.$$

Shunday qilib, berilgan qator Koshi alomatiga ko'ra yaqinlashuvchi bo'ldi.

312. $1 + \frac{1}{2^2} + \frac{1}{3^2} + \dots + \frac{1}{n^2} + \dots$ qatorning yaqinlashishini tekshiring.

Yechish. $f(n) = \frac{1}{n^2}$ yoki $f(x) = \frac{1}{x^2}$ funksiyani tuzib, ushbu xosmas integralni hisoblaymiz:

$$\int_1^\infty f(x)dx = \int_1^\infty \frac{1}{x^2} dx = \lim_{b \rightarrow \infty} \int_1^b x^{-2} dx = \lim_{b \rightarrow \infty} \left(-\frac{1}{x} \right) \Big|_1^b = \lim_{b \rightarrow \infty} \left(-\frac{1}{b} + 1 \right) = 1.$$

Demak, xosmas integral yaqinlashuvchi, tekshirilayotgan qator ham yaqinlashuvchidir.

Qatorlarni yaqinlashishning Koshi alomati bilan tekshiring

$$313. \frac{1}{\ln 2} + \frac{1}{\ln^2 3} + \dots + \frac{1}{\ln^n (n+1)} \dots .$$

$$314. \frac{1}{3} + \left(\frac{2}{5}\right)^2 + \dots + \left(\frac{n}{2n+1}\right)^n + \dots .$$

$$315. \arcsin 1 + \arcsin^2 \frac{1}{2} + \dots + \arcsin^n \frac{1}{n} + \dots .$$

$$316. \frac{2}{3} + \frac{\left(\frac{3}{2}\right)^4}{9} + \dots + \frac{\left(\frac{n+1}{n}\right)^n}{3^n} + \dots .$$

$$317. \frac{2}{1} + \left(\frac{3}{3}\right)^2 + \left(\frac{4}{5}\right)^2 + \dots + \left(\frac{n+1}{2n-1}\right)^2 + \dots .$$

$$318. \frac{1}{2} + \left(\frac{2}{5}\right)^3 + \left(\frac{3}{8}\right)^5 + \dots + \left(\frac{n}{3n-1}\right)^{2n-1} + \dots .$$

$$319*. \sum_{n=1}^{\infty} \left(\frac{2n^2 + 2n + 1}{5n^2 + 2n + 1} \right)^n .$$

$$320*. 3 + (2,1)^2 + (2,01)^3 + \dots + \left[2 + (0,1)^{n-1} \right] + \dots .$$

$$321*. \frac{3}{4} + \left(\frac{6}{7}\right)^2 + \left(\frac{9}{10}\right)^2 + \dots + \left(\frac{3n}{3n+1}\right)^n + \dots .$$

$$322**. \left(\frac{3}{4}\right)^{\frac{1}{2}} + \frac{5}{7} + \left(\frac{7}{10}\right)^{\frac{3}{2}} + \dots + \left(\frac{2n+1}{3n+1}\right)^{\frac{n}{2}} + \dots .$$

Qatorlarni yaqinlashishning integral alomati bilan tekshiring

$$323. \frac{1}{2\ln^2 2} + \frac{1}{3\ln^2 3} + \dots + \frac{1}{(n+1)\ln^2(n+1)} \dots$$

$$324. \frac{1}{2\ln 2} + \frac{1}{3\ln 3} + \dots \frac{1}{n\ln n} + \dots$$

$$325. \left(\frac{1+1}{1+1^2}\right)^2 + \left(\frac{1+2}{1+2^2}\right)^2 + \dots + \left(\frac{1+n}{1+n^2}\right)^2 + \dots$$

$$326. \frac{1}{1+1^2} + \frac{1}{1+2^2} + \frac{1}{1+3^2} + \dots \quad 327. 1 + \frac{1}{3} + \frac{1}{5} + \frac{1}{7} + \dots$$

$$328. 1 + \frac{1}{\sqrt{4}} + \frac{1}{\sqrt{7}} + \frac{1}{\sqrt{10}} + \dots \quad 329. \frac{1}{2^3} + \frac{2}{3^3} + \frac{3}{4^3} + \frac{4}{5^3} + \dots$$

$$330*. \sum_{n=1}^{\infty} \frac{1}{\sqrt{n}} \ln \frac{n+1}{n-1}. \quad 331*. \frac{1}{1+1^2} + \frac{2}{1+2^2} + \frac{3}{1+3^2} + \dots$$

$$332*. \frac{1}{3^2-1} + \frac{1}{5^2-1} + \frac{1}{7^2-1} + \dots$$

21-§. Ishorasi navbatlashuvchi qatorlar. Leybnis teoremasi

1. Ishoralari navbatlashuvchi qatorlar. Ishoralari tartibsiz holda almashuvchi qatorlarga o'zgaruvchan ishorali qatorlar deyiladi. O'zgaruvchan ishorali qatorlarning xususiy holi **ishoralari navbatlashuvchi qatorlardir**.

Ishoralari navbat bilan almashinuvchi qatorlar yaqinlashishini **Leybnis teoremasi** bilan tekshiriladi.

Ishoralari navbat bilan almashinuvchi

$$a_1 - a_2 + a_3 + \dots + (-1)^{n+1} a_n + \dots \quad (4)$$

qator berilgan bo'lsin. Bu yerda $a_1, a_2, a_3, \dots, a_n, \dots$ musbat sonlar.

2. Leybnis teoremasi. Ishoralari navbat bilan almashinuvchi (4) qator hadlarining absolyut qiymalari bo'yicha kamayuvchi, ya'ni $a_1 > a_2 > a_3 > \dots$ va umumiy hadining $n \rightarrow \infty$ dagi limiti nolga teng, ya'ni $\lim_{n \rightarrow \infty} |a_n| = 0$ bo'lsa, ishoralari navbat bilan almashinuvchi (1) qator yaqinlashuvchi bo'lib, uning yig'indisi musbat va birinchi haddan katta bo'lmaydi. Bu shartlardan birortasi bajarilmasa qator uzoqlashuvchi bo'ladi.

3. O'zgaruvchi ishorali qatorlarning absolyut va shartli yaqinlashishi.

1-ta'rif. O'zgaruvchi ishorali qator hadlarining absolyut qiymatidan tuzilgan qator yaqinlashuvchi bo'lسا, o'zgaruvchi ishorali qator **absolyut yaqinlashuvchi qator** deyiladi.

2-ta'rif. O'zgaruvchi ishorali qator yaqinlashuvchi bo'lib, uning hadlarining absolyut qiymatidan tuzilgan qator uzoqlashuvchi bo'lسا, o'zgaruvchi ishorali qator **shartli yaqinlashuvchi qator** deyiladi.

$$333. 1 - \frac{1}{2} + \frac{1}{3} - \frac{1}{4} + \dots \text{ qatorning yaqinlashishini tekshiring.}$$

Yechish. Leybnis alomati shartlarini tekshiramiz:

$$1) 1 > \frac{1}{2} > \frac{1}{3} > \frac{1}{4} > \dots;$$

$$2) \lim_{n \rightarrow \infty} a_n = \lim_{n \rightarrow \infty} \frac{1}{n} = 0. \text{ Demak, Leybnis teoremasining ikkala}$$

sharti ham bajariladi. Shunday qilib, berilgan qator Leybnis teoremasiga asosan, yaqinlashuvchi.

$$334. 1,1 - 1,01 + 1,001 - \dots \text{ qatorning yaqinlashishini tekshiring.}$$

Yechish. $1,1 > 1,01 > 1,001 > \dots$ birinchi shart bajariladi. Lekin $a_n = 1 + 0,1^n$ bo'lib, $\lim_{n \rightarrow \infty} a_n = \lim_{n \rightarrow \infty} (1 + \frac{1}{10^n}) = 1 \neq 0$, Leybnis teoremasi ikkinchi sharti bajarilmaydi. Demak, berilgan qator uzoqlashuvchi.

$$335. 1 - \frac{1}{3} + \frac{1}{9} - \frac{1}{27} + \dots \text{ qatorning yaqinlashishini tekshiring.}$$

Yechish. Berilgan qator hadlarining absolyut qiymatlaridan qator tuzamiz: $1 + \frac{1}{3} + \frac{1}{9} + \frac{1}{27} + \dots$ qator maxraji $q = \frac{1}{3}$ bo'lgan geometrik progressiya bo'lib, yaqinlashuvchidir. Demak, berilgan qator absolyut yaqinlashuvchi bo'ladi.

$$336. 1 - \frac{1}{2} + \frac{1}{3} - \frac{1}{4} + \dots + \frac{(-1)^{n+1}}{n} + \dots \text{ qatorning yaqinlashishini tekshiring.}$$

Yechish. Qator shartli yaqinlashuvchidir. Chunki, uning hadlarining absolyut qiymatlaridan tuzilgan $1 + \frac{1}{2} + \frac{1}{3} + \frac{1}{4} + \dots + \frac{1}{n} + \dots$ qator garmonik qator. Garmonik qator esa uzoqlashuvchi edi.

Quyidagi ishorasi navbatlashuvchi qatorlarni Leybnis teoremasi bilan tekshiring.

$$337. -\frac{1}{3} + \frac{1}{5} - \frac{1}{7} + \dots + \frac{(-1)^n}{2n+1} + \dots .$$

$$338. 1 - \frac{1}{2} + \frac{1}{3} - \frac{1}{4} + \dots + \frac{(-1)^{n-1}}{n} + \dots .$$

$$339. 1 - \frac{1}{3} + \frac{1}{9} - \frac{1}{27} + \dots + \frac{(-1)^{n-1}}{3^{n-1}} + \dots .$$

$$340. 1 - \frac{1}{2^2} + \frac{1}{3^2} - \frac{1}{4^2} + \dots + \frac{(-1)^{n-1}}{n^2} + \dots .$$

$$341. \frac{1}{\ln 2} - \frac{1}{\ln 3} + \frac{1}{\ln 4} - \frac{1}{\ln 5} + \dots + \frac{(-1)^{n-1}}{\ln(n+1)} + \dots .$$

$$342. 1 - \frac{1}{\sqrt{2}} + \frac{1}{\sqrt{3}} - \frac{1}{\sqrt{4}} + \dots .$$

$$343. \sum_{n=1}^{\infty} (-1)^{n+1} \frac{1}{\sqrt{n}}. \quad 344. \sum_{n=1}^{\infty} (-1)^n \frac{\ln n}{n}.$$

$$345*. \sum_{n=1}^{\infty} (-1)^n \frac{1}{n^{\alpha}}.$$

Quyidagi qatorlarni shartli yoki absolyut yaqinlashishga tekshiring.

$$346. 1 - \frac{1}{3^2} + \frac{1}{5^2} - \frac{1}{7^2} + \dots .$$

$$347. \frac{1}{2\ln 2} - \frac{1}{3\ln 3} + \frac{1}{4\ln 4} + \dots .$$

$$348. 1 - \frac{1}{\sqrt{3}} + \frac{1}{\sqrt{5}} - \dots .$$

$$349. 1 - \frac{1}{2^3} + \frac{1}{3^3} - \frac{1}{4^3} + \dots .$$

$$350. \sum_{n=1}^{\infty} (-1)^n \frac{1}{\sqrt[3]{n^5}}.$$

$$351. \sum_{n=1}^{\infty} (-1)^n \frac{1}{(n+1)\ln(n+1)}.$$

$$352. \sum_{n=1}^{\infty} (-1)^n \frac{1}{\ln(n+1)}.$$

$$353. \sum_{n=1}^{\infty} (-1)^{n+1} \left(1 + \frac{1}{3^n} \right).$$

$$354*. \sum_{n=1}^{\infty} \frac{\sin n \alpha}{(\ln 3)^n}.$$

$$355*. \sum_{n=1}^{\infty} \frac{\cos(n-1)\pi}{n^2 + 5}.$$

22-§. Funksional qatorlar

1. Funksional qatorlar haqida tushuncha.

1-ta'rif. Qator hadlari x ning funksiyalari bo'lgan quyidagi qator

$$u_1(x) + u_2(x) + u_3(x) + \dots + u_n(x) + \dots \quad (5)$$

funktional qator deyiladi. (5) da $x = x_0$ biror son bo'lsa, quyidagi sonli qatorni hosil qilamiz

$$u_1(x_0) + u_2(x_0) + u_3(x_0) + \dots + u_n(x_0) + \dots \quad (6)$$

(6) sonli qator yaqinlashuvchi bo'lsa, (1) funksional qator $x = x_0$ nuqtada yaqinlashuvchi deyiladi va $x = x_0$ nuqtaga yaqinlashish nuqtasi deb ataladi.

Funktional qator yaqinlashuvchi bo'lgan nuqtalar to'plamiga, uning **yaqinlashish sohasi** deyiladi.

(5) funksional qator n -qismiy yig'indisi

$$S_n(x) = u_1(x) + u_2(x) + u_3(x) + \dots + u_n(x) + \dots \quad (7)$$

ko'rinishda bo'ladi.

$$\lim_{n \rightarrow \infty} S_n(x) = S(x). \quad (8)$$

$S(x)$ funksional qatorning yig'indisi, $R_n(x) = S(x) - S_n(x)$ qatorning qoldiq hadi deyiladi.

x sohada $\lim_{n \rightarrow \infty} S_n(x) = S(x)$ bajarilsa, shu sohada $\lim_{n \rightarrow \infty} R_n(x) = 0$ bo'ladi.

Dalamber alomatidan $\lim_{n \rightarrow \infty} \left| \frac{u_{n+1}(x)}{u_n(x)} \right| = \varphi(x)$. Koshi alomatidan

$\lim_{n \rightarrow \infty} \sqrt[n]{|u_n(x)|} = \varphi(x)$, $\varphi(x) < 1$ tengsizlikni yechib, funksional qatorning yaqinlashish intervali topiladi, chetki nuqtalardagi qiymatlarda qatorni tekshirib, yaqinlashish intervali topiladi.

x_0 sohada yaqinlashuvchi (5) qator berilgan, uning yig'indisi $S(x)$, n -qismiy yig'indisi $S_n(x)$, qoldiq esa $R_n(x)$ bo'lsin.

2-ta'rif. Ixtiyoriy $\varepsilon > 0$ son uchun shunday $N = N(\varepsilon)$ nomer topilsa va $n > N$ da $\forall x \in [a, b] \subseteq X_0$ da yaqinlashuvchi (5) qator uchun $|R_n(x)| < \varepsilon$ tengsizlik bajarilsa, bu qatorda $[a, b]$ kesmada **tekis yaqinlashuvchi qator** deyiladi.

Teorema. (Veyershtrs alomati). Agar (5) funksional qator uchun shunday musbat hadli yaqinlashuvchi $\sum_{n=1}^{\infty} a_n$ sonli qator topilsa va $\forall x \in [a, b]$ da $|u_n(x)| \leq a_n$, $n = 1, 2, \dots$ tengsizlik bajarilsa, u holda (5)

qator $[a, b]$ kesmada absolyut va tekis yaqinlashadi. $\sum_{n=1}^{\infty} a_n$ sonli qator (5) funksional qator uchun **majorant** qator deyiladi.

356. $1+x+x^2+\dots+x^n+\dots$ funksional qatorni $x=\frac{1}{2}$ va $x=2$ nuqtada yaqinlashishga tekshiring.

Yechish. Funksional qator $x=\frac{1}{2}$ nuqtada yaqinlashuvchidir, chunki

$$1 + \frac{1}{2} + \frac{1}{2^2} + \frac{1}{2^3} + \dots + \frac{1}{2^n} + \dots$$

sonli qator yaqinlashuvchi. Berilgan funksional qator $x=2$ nuqtada uzoqlashuvchi, chunki

$$1 + 2 + 2^2 + 2^3 + \dots + 2^n + \dots$$

sonli qator uzoqlashuvchi.

357. $\sum_{n=1}^{\infty} \frac{2}{n!} (x-1)^{2n}$ funksional qatorning yaqinlashish sohasini toping.

Yechish. Bu qator uchun Dalamber alomatini qo'llaymiz:

$$\varphi(x) = \lim_{n \rightarrow \infty} \left| \frac{u_{n+1}(x)}{u_n(x)} \right| = \lim_{n \rightarrow \infty} \left| \frac{2^{n+1} (x-1)^{2(n+1)}}{(n+1)!} \cdot \frac{n!}{2^n (x-1)^{2n}} \right| = 2(x-1)^2 \lim_{n \rightarrow \infty} \frac{1}{n+1} = 0.$$

Demak, $\varphi(x)=0 < 1$ bo'lib, bundan esa $(-\infty; +\infty)$ butun son o'qida qator yaqinlashuvchi.

358. $\sum_{n=1}^{\infty} \left(1 + \frac{1}{n}\right)^n e^{nx}$ funksional qatorning yaqinlashish sohasini toping.

Yechish. Bu qator uchun Koshi alomatini qo'llaymiz:

$$\varphi(x) = \lim_{n \rightarrow \infty} \sqrt[n]{|u_n(x)|} = \lim_{n \rightarrow \infty} \sqrt[n]{\left(1 + \frac{1}{n}\right)^n e^{nx}} = e^x \lim_{n \rightarrow \infty} \left(1 + \frac{1}{n}\right) = e^x.$$

$x < 0$ da $e^x < 1$ bo'ladi.

$x = 0$ da $\sum_{n=1}^{\infty} \left(1 + \frac{1}{n}\right)^n$ qator hosil bo'ladi, chunki $\lim_{n \rightarrow \infty} \left(1 + \frac{1}{n}\right)^n = e \neq 0$.

Demak, berilgan qator $(-\infty; 0)$ intervalda yaqinlashadi.

359. $\sum_{n=1}^{\infty} \frac{\sin n^2 x}{n^2}$ funksional qatorni yaqinlashishga tekshiring.

Yechish. Bu qator uchun hadlarini absolyut qiymatlaridan qator tuzamiz:

$$\sum_{n=1}^{\infty} \left| \frac{\sin n^2 x}{n^2} \right| = \left| \frac{\sin x}{1^2} \right| + \left| \frac{\sin 2^2 x}{2^2} \right| + \dots + \left| \frac{\sin n^2 x}{n^2} \right| + \dots$$

$\forall x \in R$ da $\left| \frac{\sin n^2 x}{n^2} \right| \leq \frac{1}{n^2}$. Hadlari $\frac{1}{n^2}$ bo‘lgan qator yaqinlashuvchi.

Demak, berilgan qator butun sonlar o‘qida absolyut yaqinlashadi.

360. $\sum_{n=1}^{\infty} (-1)^{n+1} \frac{1}{x^{2n} + n}$ qatorni tekis yaqinlashish sohasini toping.

Yechish. Leybnis alomatiga ko‘ra, berilgan qator $X_0 = (-\infty; +\infty)$ soha yaqinlashuvchi.

$$1) \frac{1}{x^2 + 1} > \frac{1}{x^4 + 2} > \frac{1}{x^6 + 3} > \dots > \frac{1}{x^{2n} + n}, \quad 2) \lim_{n \rightarrow \infty} \frac{1}{x^{2n} + n} = 0.$$

U holda qatorning qoldig‘i $|R_n(x)| < |u_{n+1}(x)|$ tengsizlik bilan baholanadi:

$$|R_n(x)| < \left| \frac{1}{x^{2n+2} + n+1} \right| < \frac{1}{n+1}.$$

$\frac{1}{n+1} \leq \varepsilon$ tengsizlikdan $n \geq \frac{1}{\varepsilon} - 1$ kelib chiqadi. U holda $n \geq N$ dan boshlab $|R_n(x)| \leq \varepsilon$ bo‘ladi, bu yerda $N = \frac{1}{\varepsilon} - 1$. Demak, berilgan qator $X_0 = (-\infty; +\infty)$ soha tekis yaqinlashadi.

361. $\sum_{n=1}^{\infty} \frac{\cos nx}{n^2 + \sqrt{(1-x^2)^n}}$ qatorning tekis yaqinlashish sohasini toping.

Yechish. Qator hadlari $[1; 1]$ kesmada aniqlangan va uzluksiz. Ixtiyoriy n natural son uchun

$$|u_n(x)| = \left| \frac{\cos nx}{n^2 + \sqrt{(1-x^2)^n}} \right| \leq \frac{1}{n^2 + \sqrt{(1-x^2)^n}} \leq \frac{1}{n^2} = a_n.$$

Bu yerda $\sum_{n=1}^{\infty} \frac{1}{n^2}$ qator yaqinlashuvchi. Demak, bu qator berilgan qator uchun majorant qator bo‘ladi. U holda Veyershtras alomatiga ko‘ra berilgan qator $[-1; 1]$ kesmada tekis yaqinlashuvchi.

Funktional qatorlarning yaqinlashish sohasini toping

362. $\sum_{n=1}^{\infty} \frac{1}{n^x}$.

363. $\sum_{n=1}^{\infty} (-1)^{n+1} \frac{1}{n^x}$.

364. $\sum_{n=1}^{\infty} (-1)^{n+1} \frac{1}{n^{\ln x}}$.

365. $\sum_{n=1}^{\infty} \frac{\sin(2n-1)x}{(2n-1)^2}$. 366. $\sum_{n=1}^{\infty} 2^n \sin \frac{x}{3^n}$. 367. $\sum_{n=1}^{\infty} (-1)^n \frac{n}{x^4 + n^2}$.
 368. $\sum_{n=1}^{\infty} \frac{1}{1+x^{2n}}$. 369. $\sum_{n=1}^{\infty} (-1)^{n-1} n e^{nx}$. 370. $\sum_{n=1}^{\infty} \frac{(8x^2+1)^n}{3^n}$.
 371. $\sum_{n=1}^{\infty} \lg^n(x-2)$. 372*. $\sum_{n=1}^{\infty} \frac{\cos nx}{e^{nx}}$. 373*. $\sum_{n=1}^{\infty} (-1)^n \frac{1}{\sqrt{4-x^2+n^2}}$.

23-§. Darajali qatorlar

$$a_0 + a_1(x-a) + a_2(x-a)^2 + \dots + a_n(x-a)^n + \dots \quad (9)$$

funktional qatorga darajali qator deyiladi. $a_0, a_1, a_2, \dots, a_n, \dots$ o'zgarmas sonlar darajali qatorning koefitsiyentlari deb ataladi.

Darajali qator shunday xossaga egaki, u $x = b_0$ nuqtada yaqinlashuvchi bo'lsa, $|x - x_0| < |b_0 - x_0|$ tengsizlikni qonoatlaniruvchi hamma x lar uchun ham yaqinlashuvchi bo'ladi. Darajali qator uchun shunday R son mavjudki, $|x - x_0| < R$ uchun qator absolyut yaqinlashuvchi, $|x - x_0| > R$ uchun qator uzoqlashuvchi, ya'ni $x_0 - R < x < x_0 + R$ oraliqda darajali qator absolyut yaqinlashuvchi, $x = x_0 \pm R$ nuqtalarda hosil bo'lgan qator yaqinlashuvchi yoki uzoqlashuvchi bo'lishi mumkin. Har ikki nuqtada qator yaqinlashishini alohida tekshirish kerak. $(x_0 - R, x_0 + R)$ intervalga **yaqinlashish intervali**, R ga darajali qatorning **yaqinlashish radiusi** deyiladi. Yaqinlashish radiusi $R=0$, $R=\infty$ bo'lishi mumkin $R=0$ bo'lsa, darajali qator faqat $x = x_0$ nuqtada, $R=+\infty$ bo'lsa, sonlar o'qining hamma joyida yaqinlashuvchi bo'ladi.

Yaqinlashish intervalini berilgan qatorning absolyut qiymatidan tuzilgan qator uchun sonli qatorlarning yaqinlashish alomatlaridan foydalanib topish mumkin. Darajali qatorning hamma koefitsiyentlari 0 dan farqli bo'lsa, yaqinlashish radiusini Dalamber alomatidan $R = \lim_{n \rightarrow \infty} \left| \frac{a_n}{a_{n+1}} \right|$, yoki Koshi alomatidan $R = \lim_{n \rightarrow \infty} \frac{1}{\sqrt[n]{|a_n|}}$

foydalanib, formulalar yordamida topiladi.

374. $x + \frac{1}{2}x^2 + \frac{1}{3}x^3 + \dots$ darajali qator yaqinlashishga tekshiring.

Yechish. $a_n = \frac{1}{n}$, $a_{n+1} = \frac{1}{(n+1)}$, qatorning yaqinlashish radiusini topamiz.

$$R = \lim_{n \rightarrow \infty} \left| \frac{a_n}{a_{n+1}} \right| = \lim_{n \rightarrow \infty} \left(\frac{1}{n} : \frac{1}{n+1} \right) = \lim_{n \rightarrow \infty} \left| \frac{n+1}{n} \right| = 1.$$

Demak, $-1 < x < 1$ tengsizlikni qanoatlaniruvchi hamma x lar uchun qator yaqinlashuvchi. Qator yaqinlashishini intervalning chetki nuqtalarida tekshiramiz: $x=1$ bo'lsin. Bu holda $\frac{1}{2} + \frac{1}{3} + \frac{1}{4} + \dots$ garmonik qator hosil bo'lib, u uzoqlashuvchidir.

$x=-1$ bo'lsin, bu holda $-1 + \frac{1}{2} - \frac{1}{3} + \frac{1}{4} + \dots$ sonli qator hosil bo'lib, u

Leybnis teoremasi shartlarini qanoatlanirgani uchun yaqinlashuvchi bo'ladi. Shunday qilib, berilgan qatorning yaqinlashish intervali $-1 \leq x < 1$ dan iborat.

375. $(x-2) + \frac{1}{2^2}(x-2)^2 + \frac{1}{3^2}(x-2)^3 + \dots + \frac{1}{n^2}(x-2)^n + \dots$ darajali qatorni yaqinlashishga tekshiring.

Yechish. $a_n = \frac{1}{n^2}$, $a_{n+1} = \frac{1}{(n+1)^2}$ bo'lganligi uchun

$$R = \left| \lim_{n \rightarrow \infty} \frac{(n+1)^2}{n^2} \right| = \lim_{n \rightarrow \infty} \left| \left(1 + \frac{1}{n}\right)^2 \right| = 1.$$

Demak, $-1 < x-2 < 1$ yoki $1 < x < 3$ intervalda qator yaqinlashuvchi. Intervalning chetki nuqtalarida qator yaqinlashishini tekshiramiz. $x=3$ bo'lsin, bunda $1 + \frac{1}{2^2} + \frac{1}{3^2} + \dots$ sonli qator hosil bo'lib, integral alomatidan foydalansak, uning yaqinlashuvchiligi kelib chiqadi (bajarib ko'ring).

$x=1$ bo'lsa, $-1 + \frac{1}{2^2} - \frac{1}{3^2} + \dots$ sonli qator hosil bo'lib, u absolyut yaqinlashuvchidir. Shunday qilib, berilgan qatorning yaqinlashish intervali $1 \leq x \leq 3$ bo'ladi.

Darajali qatorlarning yaqinlashish intervalini toping

$$376. \sum_{n=1}^{\infty} x^n.$$

$$377. \sum_{n=1}^{\infty} \frac{x^n}{n \cdot 2^n}.$$

$$378. \sum_{n=1}^{\infty} \frac{x^{2n-1}}{2n-1}.$$

$$379. \sum_{n=1}^{\infty} \frac{2^{n-1} x^{2n-1}}{(4n-3)^2}.$$

$$380. \sum_{n=1}^{\infty} \frac{(-1)^{n-1} x^n}{n}.$$

$$381. \sum_{n=1}^{\infty} \frac{n}{n+1} \left(\frac{x}{2}\right)^n.$$

$$382. \sum_{n=1}^{\infty} \frac{x^n}{n^n}.$$

$$383. \sum_{n=1}^{\infty} \left(\frac{n}{2n+1}\right)^{2n-1} x^n. \quad 384. \sum_{n=1}^{\infty} 3^{n^2} x^{n^2},$$

$$385*. \sum_{n=1}^{\infty} \frac{(n+1)^5 x^{2n}}{2n+1}.$$

$$386*. \sum_{n=1}^{\infty} \frac{n! x^n}{n^n}.$$

$$387*. \sum_{n=1}^{\infty} n! x^n.$$

24-§. Teylor va Makloren qatorlari. Darajali qatorni taqribiy hisoblashga tatlbiqi. Darajali qatorni yordamida differensial tenglamani yechish

1. $y=f(x)$ funksiya $x=a$ nuqtada $(n+1)$ tartibgacha hosilalarga ega bo'lsa, u holda quyidagi Teylor formulasi o'rinnlidir:

$$f(x) = f(a) + \frac{f'(a)}{1!}(x-a) + \frac{f''(a)}{2!}(x-a)^2 + \dots + \frac{f^{(n)}(a)}{n!}(x-a)^n + R_n(x), \quad (10)$$

bu yerda $R_n(x) = \frac{f^{(n+1)}[a+Q(x-a)]}{(n+1)!}(x-a)^{n+1}$ ($0 < Q < 1$) bo'lib, Lagranj shaklidagi qoldiq hadi deyildi.

$a=0$ da Teylor formulasining xususiy holi – Makloren formulasi hosil bo'ladi:

$$\begin{aligned} f(x) &= f(0) + \frac{f'(0)}{1!}x + \frac{f''(0)}{2!}x^2 + \dots + \frac{f^{(n)}(0)}{n!}x^n + R_n(x), \\ R(x) &= \frac{f^{(n+1)}[Q(x)]}{(n+1)!}x^{n+1}, \quad (0 < Q < 1). \end{aligned} \quad (11)$$

$y=f(x)$ funksiya a nuqta atrofida istalgan marta differensiallanuvchi bo'lsa va bu nuqtaning biror atrofida $\lim_{x \rightarrow a} R_n(x) = 0$ bo'lsa, Teylor va Makloren formulalaridan

$$f(x) = f(a) + \frac{f'(a)}{1!}(x-a) + \frac{f''(a)}{2!}(x-a)^2 + \dots + \frac{f^{(n)}(a)}{n!}(x-a)^n + \dots, \quad (12)$$

$$f(x) = f(0) + \frac{f'(0)}{1!}x + \frac{f''(0)}{2!}x^2 + \dots + \frac{f^{(n)}(0)}{n!}x^n + \dots$$

qatorlar hosil bo'ladi. Bularning birinchisi Teylor qatori, ikkinchisiga Makloren qatori deyildi.

2. Funksiyalarni darajali qatorlarga yoyish.

$$e^x = 1 + \frac{x}{1!} + \frac{x^2}{2!} + \frac{x^3}{3!} + \dots + \frac{x^n}{n!} + \dots \quad (-\infty < x < +\infty). \quad (13)$$

$$\sin x = x - \frac{x^3}{3!} + \frac{x^5}{5!} - \frac{x^7}{7!} + \dots + (-1)^{n-1} \frac{x^{2n-1}}{(2n-1)!} + \dots . \quad (14)$$

$$\cos x = 1 - \frac{x^2}{2!} + \frac{x^4}{4!} - \frac{x^6}{6!} + \dots + (-1)^{n-1} \frac{x^{2n-2}}{(2n-2)!} + (-1)^n \frac{x^{2n}}{(2n)!} + \dots . \quad (15)$$

$$(1+x)^m = 1 + \frac{m}{1!}x + \frac{m(m-1)}{2!}x^2 + \frac{m(m-1)(m-2)}{3!}x^3 + \dots . \quad (16)$$

$$\ln(1+x) = x - \frac{x^2}{2} + \frac{x^3}{3} - \frac{x^4}{4} + \dots + (-1)^{n-1} \frac{x^n}{n} + \dots \quad (-1 < x \leq 1). \quad (17)$$

$$\ln(N+1) = \ln N + 2 \left(\frac{1}{2N+1} + \frac{1}{3(2N+1)^3} + \frac{1}{5(2N+1)^5} + \dots \right), \quad N > 0.$$

3. Darajali qatorni taqrribiy hisoblashga tatbiqi.

388. $\sin 1$ ni $\varepsilon = 0,001$ aniqlikda hisoblang.

Yechish. $\sin x$ funksiya (14) formulaga asosan:

$$\sin 1 \approx 1 - \frac{1}{3!} \cdot 1^2 + \frac{1}{5!} \cdot 1^5 - \dots = \sum_{n=1}^{\infty} (-1)^n \frac{1}{(2n-1)!}.$$

O'ng tomondagi qator absolyut yaqinlashadi.

$\frac{1}{5!} \approx 0,008(3) > 0,001$ va $\frac{1}{7!} \approx 0,0002 < 0,001$ ekanligidan $\sin 1$ ni 0,001 aniqlikda hisoblash uchun uchta hadni olish yetarli:

$$\sin 1 \approx 1 - \frac{1}{3!} \cdot 1^2 + \frac{1}{5!} \cdot 1^5 = 0,842.$$

389. $\ln 2$ ni $\varepsilon = 0,0001$ aniqlikda hisoblang.

Yechish. $\ln(1+x)$ funksiya (17) formulaning 2-siga asosan,

$$N=1:$$

$$\ln 2 = \ln 1 + 2 \left(\frac{1}{3} + \frac{1}{3 \cdot 3^3} + \frac{1}{5 \cdot 3^5} + \frac{1}{7 \cdot 3^7} + \dots \right).$$

$$R_4(1) < \frac{1}{4(2n+1) \cdot 3^{2n-1}},$$

$$R_4(1) < \frac{1}{4 \cdot 9 \cdot 3^7} < \frac{1}{10000}.$$

Demak,

$$\ln 2 \approx 2 \cdot \left(\frac{1}{3} + \frac{1}{3 \cdot 3^3} + \frac{1}{5 \cdot 3^5} + \frac{1}{7 \cdot 3^7} + \dots \right) = 0,6931.$$

390. $\sqrt{17}$ ni $\varepsilon = 0,0001$ aniqlikda hisoblang.

Yechish. Berilgan misolda almashtirish bajarib, (16) formuladan foydalanamiz:

$$\sqrt{17} = \sqrt{16+1} = \sqrt{16 \left(1 + \frac{1}{16} \right)} = 4 \left(1 + \frac{1}{16} \right)^{\frac{1}{2}}.$$

(16) formulada $x = \frac{1}{16}$, $\alpha = \frac{1}{2}$ deb topamiz:

$$\left(1 + \frac{1}{16} \right)^{\frac{1}{2}} = 1 + \frac{1}{2 \cdot 16} - \frac{1}{2^3 \cdot 16^2} + \frac{1}{2^4 \cdot 16^3} - \frac{1}{2^7 \cdot 16^4} + \dots.$$

Bu qator ishorasi almashinuvchi. Uning qoldig'i $|R_3| < |\alpha_{n+1}|$ tengsizlik bilan baholanadi:

$$R_3 < |\alpha_4| = \frac{1}{2^4 \cdot 16^3} = \frac{1}{65536} < 0,0001.$$

Demak,

$$\sqrt{17} \approx 4 \cdot \left(1 + \frac{1}{2 \cdot 16} - \frac{1}{2^3 \cdot 16^2} \right) = 4,1230.$$

391. $\int_0^{0,1} \frac{\ln(1+x)}{x} dx$ integralni $\varepsilon = 0,0001$ aniqlikda hisoblang.

Yechish.

$$\begin{aligned} \int_0^{0,1} \frac{\ln(1+x)}{x} dx &= \int_0^{0,1} \frac{1}{x} \left[\sum_{n=1}^{\infty} (-1)^n \frac{x^{n-1}}{n+1} \right] dx = \sum_{n=1}^{\infty} (-1)^n \int_0^{0,1} \frac{x^{n-1}}{n+1} dx = \\ &= \sum_{n=1}^{\infty} (-1)^n \frac{x^{n+1}}{(n+1)^2} \Big|_0^{0,1} = \frac{1}{10} - \frac{1}{2^2 \cdot 100} + \frac{1}{3^2 \cdot 1000} \approx 0,0076. \end{aligned}$$

4. Darajali qator yordamida differensial tenglamalarni taqribiy yechishning noma'lum koeffitsiyentlar usuli.

$y'' + p(x)y' + q(x)y = f(x)$, $y(0) = y_0$, $y'(0) = y'_0$ ikkinchi tartibli differensial tenglamani $y = \sum_{n=1}^{\infty} c_n (x - x_0)^n$ ko'rinishdag'i qator yordamida yechish mumkin. Buning uchun $p(x)$, $q(x)$ va $f(x)$ funktsiyalarni darajali qatorlarga yoyib, noma'lum koeffitsiyentlar topiladi.

392. $y'' + xy' + y = x \cos x$, $y(0) = 0$, $y'(0) = 1$ differensial tenglamani noma'lum koeffitsiyentlar usulida yeching.

Yechish. $p(x)$, $q(x)$ va $f(x)$ funksiyalarni darajali qatorlarga yoyamiz.

$$p(x) = x, \quad q(x) = 1, \quad x \cos x = x \left(1 - \frac{x^2}{2} + \frac{x^4}{4} - \dots\right).$$

Tenglamaning yechimini quyidagi ko'rinishda qidiramiz:

$$y = c_0 + c_1 x + c_2 x^2 + c_3 x^3 + \dots$$

U holda

$$y' = c_1 + 2c_2 x + 3c_3 x^2 + 4c_4 x^3 + \dots, \quad y'' = 2c_2 + 2 \cdot 3c_3 x + 3 \cdot 4c_4 x^2 + \dots$$

Boshlang'ich shartlardan topamiz: $c_0 = 0$, $c_1 = 1$. Topilganlami tenglamaga qo'yamiz:

$$\begin{aligned} & \left(2c_2 + 2 \cdot 3c_3 x + 3 \cdot 4c_4 x^2 + \dots\right) + x \left(1 + 2c_2 x + 3c_3 x^2 + 4c_4 x^3 + \dots\right) + \\ & + \left(x + c_2 x^2 + c_3 x^3 + \dots\right) = x \left(1 - \frac{x^2}{2} + \frac{x^4}{4} - \dots\right). \end{aligned}$$

x ning bir xil darajalari oldidagi koeffitsiyentlarni tenglash-tiramiz:

$$c_2 = c_4 = c_6 = \dots = 0, \quad c_3 = -\frac{1}{3!}, \quad c_5 = \frac{1}{5!}, \quad c_7 = \frac{1}{7!}.$$

$$\text{Demak, izlangan yechim } y = x - \frac{x^3}{3!} + \frac{x^5}{5!} - \frac{x^7}{7!} + \dots = \sin x.$$

Taylor va Makloren qatorlariga doir misollar

393. $f(x) = x^4 - 4x^3 - 2x + 1$ funksiyani $x_0 = -1$ nuqta atrofida Taylor qatoriga yoying.

394. $f(x) = x^5 - x^3 + x - 1$ funksiyani $x_0 = 1$ nuqta atrofida Taylor qatoriga yoying.

Quyidagi funksiyalarni x ning darajalari bo'yicha Makloren qatoriga yoying

395. $f(x) = 3^x$.

396. $f(x) = e^{-2x}$.

397. $f(x) = \cos^2 x$.

398. $f(x) = \sin^2 x$.

399. $f(x) = \ln(x+a)$, $a > 0$.

400. $f(x) = \sqrt{x+a}$, $a > 0$.

401. $f(x) = ch^2 x$.

402*. $f(x) = \cos^2 x \sin^2 x$.

Darajali qatorlar yordamida 0,0001 aniqlikda hisoblang

403. $\ln 1,1$.

404. $\sin 12^\circ$.

405. \sqrt{e} .

406. $\sqrt[4]{520}$.

Darajali qatorlar yordamida integralni 0,0001 aniqlikda hisoblang

407. $\int_0^1 \frac{1-\cos x}{x} dx.$

408. $\int_0^{1/4} e^{-x^2} dx.$

409. $\int_0^{\pi/2} \frac{\operatorname{arctg} x}{x} dx.$

410. $\int_0^1 \cos \sqrt{x} dx.$

Differensial tenglamalarni noma'lum koeffitsiyentlar usuli bilan yeching

411. $y'' + xy' + y = 1, \quad y(0) = 0, \quad y'(0) = 0.$

412. $y'' - xy' + y = x, \quad y(0) = 0, \quad y'(0) = 0.$

413. $y'' = x^2 y \quad y(0) = 1, \quad y'(0) = 1.$

414. $y'' + xy' = 0, \quad y(0) = 1, \quad y'(0) = 0.$

25-§. Furye qatori. Toq va juft, davri $2l$ bo'lgan funksiyalarining Furye qatorlari

$$f(x) = \frac{a_0}{2} + \sum_{n=1}^{\infty} (a_n \cos nx + b_n \sin nx) \quad (18)$$

Yig'indi trigonometrik qator deyiladi, uning yig'indisi davri $T = 2\pi$, $[-\pi, \pi]$ bo'lgan $f(x)$ funksiyadan iborat. a_0, a_n, b_n – koeffitsiyentlari bo'lib, quyidagi formulalar bilan topiladi:

$$a_0 = \frac{1}{\pi} \int_{-\pi}^{\pi} f(x) dx, \quad a_n = \frac{1}{\pi} \int_{-\pi}^{\pi} f(x) \cos nx dx, \quad b_n = \frac{1}{\pi} \int_{-\pi}^{\pi} f(x) \sin nx dx. \quad (19)$$

$f(x)$ funksiya juft bo'lsa:

$$a_0 = \frac{2}{\pi} \int_0^{\pi} f(x) dx, \quad a_n = \frac{2}{\pi} \int_0^{\pi} f(x) \cos nx dx, \quad b_n = 0.$$

$f(x)$ funksiya toq bo'lsa: $a_0 = a_n = 0, \quad b_n = \frac{2}{\pi} \int_0^{\pi} f(x) \sin nx dx.$

$f(x)$ funksiya davri $T = 2l$, $[-l; l]$ davrga ega bo'lsa:

$$f(x) = \frac{a_0}{2} + \sum_{n=1}^{\infty} \left(a_n \cos \frac{n\pi}{l} x + b_n \sin \frac{n\pi}{l} x \right). \quad (20)$$

$$a_n = \frac{1}{l} \int_{-l}^l f(x) \cos \frac{n\pi}{l} x dx, \quad n = 0, 1, 2, \dots \quad b_n = \frac{1}{l} \int_{-l}^l f(x) \sin \frac{n\pi}{l} x dx, \quad n = 1, 2, \dots \quad (21)$$

415. $f(x) = x$ funksiyani $[-\pi; \pi]$ kesmada Furye qatoriga yoying.

Yechish. $f(x)$ funksiya toq bo'lgani uchun $a_0 = a_n = 0$.

$$\begin{aligned} b_n &= \frac{2}{\pi} \int_0^\pi f(x) \sin nx dx = \frac{2}{\pi} \int_0^\pi x \sin nx dx = \frac{2}{\pi} \left[-\frac{1}{n} x \cos nx \Big|_0^\pi + \frac{1}{n^2} \int_0^\pi \cos nx dx \right] = \\ &= \frac{2}{\pi} \left[-\frac{1}{n} \pi \cos n\pi + \frac{1}{n^2} \sin nx \Big|_0^\pi \right] = (-1)^{n+1} \frac{2}{n}. \end{aligned}$$

Demak, $f(x) = x$ funksiyaning Furye qatori quyidagi ko'rinishda bo'ladi:

$$x = 2 \sum_{n=1}^{\infty} (-1)^{n+1} \frac{\sin nx}{n} = 2 \left(\frac{\sin x}{1} - \frac{\sin 2x}{2} + \frac{\sin 3x}{3} - \dots + (-1)^{n+1} \frac{\sin nx}{n} \right).$$

416. $f(x) = x+1$ funksiyani $(-1; 1)$ intervalda Furye qatoriga yoying. **Yechish.** $a_0 = \int_{-1}^1 f(x) dx = \int_{-1}^1 (x+1) dx = \frac{(x+1)^2}{2} \Big|_{-1}^1 = 2$,

$$\begin{aligned} a_n &= \int_{-1}^1 (x+1) \cos n\pi x dx = \frac{1}{n\pi} \left[(x+1) \sin n\pi x \Big|_{-1}^1 - \int_{-1}^1 \sin n\pi x dx \right] = \\ &= \frac{1}{n\pi} \frac{\cos n\pi x}{n\pi} \Big|_{-1}^1 = \frac{1}{n^2\pi^2} [\cos n\pi - \cos(-n\pi)] = 0, \end{aligned}$$

$$\begin{aligned} b_n &= \int_{-1}^1 (x+1) \sin n\pi x dx = \frac{1}{n\pi} \left[-(x+1) \cos n\pi x \Big|_{-1}^1 - \int_{-1}^1 \cos n\pi x dx \right] = \\ &= \frac{1}{n\pi} \left(-2 \cos n\pi + \frac{\sin n\pi x}{n\pi} \Big|_{-1}^1 \right) = -\frac{2(-1)^n}{n\pi} = (-1)^{n+1} \frac{2}{n\pi}. \end{aligned}$$

Demak,

$$x+1 = 1 + \frac{2}{\pi} \sum_{n=1}^{\infty} \frac{(-1)^{n+1} \sin n\pi x}{n} = 1 + \frac{2}{\pi} \left(\frac{\sin \pi x}{1} - \frac{\sin 2\pi x}{2} + \dots + (-1)^{n+1} \frac{\sin n\pi x}{n} \right).$$

Quyidagi funksiyalarni Furye qatoriga yoying

417. $f(x) = x^2, \quad T = 2\pi, \quad (-\pi; \pi].$

418. $f(x) = x^3, \quad T = 2\pi, \quad (-\pi; \pi].$

419. $f(x) = x + |x|, \quad T = 2\pi, \quad (-\pi; \pi].$

420. $f(x) = \pi - x, \quad T = 2\pi, \quad (-\pi; \pi].$

$$421. f(x) = \begin{cases} -4, & -\pi < x < 0, \\ 4, & 0 \leq x < \pi, \end{cases} T = 2\pi.$$

$$422. f(x) = \begin{cases} 0, & -\pi < x < 0, \\ \pi, & 0 \leq x < \pi, \end{cases} T = 2\pi.$$

$$423. f(x) = 1 - |x|, T = 6, [-3; 3].$$

$$424. f(x) = 2x, T = 1, (0; 1).$$

$$425. f(x) = \begin{cases} 3, & 0 < x \leq 2, \\ 0, & 2 < x < 4, \end{cases} T = 4.$$

$$426. f(x) = \begin{cases} 0, & -3 < x \leq 0, \\ x, & 0 < x < 3, \end{cases} T = 6.$$

V BOB. ODDIY DIFFERENSIAL TENGLAMALAR

26-§. Birinchi tartibli differential tenglamalar, o'zgaruvchisi ajralgan va ajraladigan tenglamalar

1. Differential tenglamalar haqida umumiy tushunchalar

1-ta'rif. Erkli o'zgaruvchi x , noma'lum funksiya y hamda uning hosilalari orasidagi bog'lanishni ifodalovchi tenglama **differential tenglama** deyiladi.

Noma'lum funksiya faqat bitta o'zgaruvchiga bog'liq bo'lsa, bunday differential tenglamaga **oddiy differential tenglama** deyiladi.

Noma'lum funksiya ikki yoki undan ko'p o'zgaruvchilarga bog'liq bo'lsa, bunday differential tenglamalarga **xususiy hosilali differential tenglamalar** deyiladi.

2-ta'rif. Differential tenglamaga kirgan hosilalarning eng yuqori tartibiga **differential tenglamaning tartibi** deyiladi.

$y'' = 3x^2$, $y''' = \cos x$ tenglamalar mos ravishda ikkinchi va uchinchi tartibli tenglamalarga misol bo'ladi. Umumiyl holda n -tartibli differential tenglama $F(x, y, y', y'', \dots, y^{(n)}) = 0$ ko'rinishda belgilanadi.

3-ta'rif. Differential tenglamaning yechimi yoki **integrali** deb tenglamaga qo'yganda uni ayniyatga aylantiradigan har qanday differentiallanuvchi $y = \varphi(x)$ funksiyaga aytildi.

Differential tenglama yechimining grafigiga **integral chiziq** deyiladi. Masalan, $\frac{dy}{dx} = 2x$. $y = x^2$ berilgan differential tenglamaning yechimi bo'lib, bu holda integral chiziq paraboladan iborat bo'ladi.

2. **Birinchi tartibli tenglamalar.** Birinchi tartibli tenglama umumiy holda

$$F(x, y, y') = 0 \quad (1)$$

ko'rinishda yoziladi. (1) tenglamani y' ga nisbatan yechsak

$$y' = f(x, y) \text{ yoki } \frac{dy}{dx} = f(x, y) \quad (2)$$

bo'ladi. (2) tenglamaning o'ng tomoni faqat x ning funksiyasi bo'lsa, tenglama

$$y' = f(x) \quad (3)$$

ko'rinishida bo'lib, oxirgi tenglikdan bevosita ko'rish mumkinki, bunday tenglamaning yechimini topish $f(x)$ funksiyaning boshlang'ich funksiyasini topishdan iborat bo'ladi, ya'ni $y = F(x) + C$, $[F(x)]' = f(x)$. Shunday qilib, (3) ko'rinishdagi birinchi tartibli differensial tenglamaning yechimi cheksiz ko'p yechimlar to'plamidan iborat bo'ladi.

4-ta'rif. $y = \varphi(x, C)$ x ning funksiyasi har bir C ixtiyoriy o'zgarmas bo'lganda (2) tenglamani qanoatlantirsa, uning **umumiy yechimi** deyiladi.

5-ta'rif. C ixtiyoriy o'zgarmasning muayyan qiymatida umumiy yechimdan olinadigan yechimga **xususiy yechim** deyiladi.

Umumiy yechimdan xususiy yechimni olish uchun ko'pincha qo'shimcha

$$y(x_0) = y_0 \quad (4)$$

shartdan foydalilaniladi, bu yerda x_0 , y_0 lar berilgan sonlar bo'lib, bu shartga boshlang'ich shart deb ataladi.

6-ta'rif. $y' = f(x, y)$ differensial tenglamaning (4) boshlang'ich shartni qanoatlantiruvchi yechimini topish masalasiga **Koshi masalasi** deyiladi.

3. O'zgaruvchilarajralgan va ajraladigan birinchi tartibli tenglamalar.

7-ta'rif. $M(x)dx + N(y)dy = 0$ ko'rinishdagi tenglamaga **o'zgaruvchilarajralgan** differensial tenglama deyiladi.

Bunday differensial tenglamani bevosita, tenglikni integrallab uning umumiy yechimi topiladi, ya'ni $\int M(x)dx + \int N(y)dy = C$ bo'ladi.

8-ta'rif. $y' = f_1(x)f_2(y)$ yoki $\frac{dy}{dx} = f_1(x)f_2(y)$ ko'rinishdagi tenglamaga **o'zgaruvchilarajraladigan differensial tenglama** deyiladi. Bunday differensial tenglamani $f_2(y)$ ga bo'lib, dx ga

ko‘paytirib $\frac{dy}{f_2(y)} = f_1(x)dx$ o‘zgaruvchilari ajralgan differensial tenglamaga keltirish bilan yechimi topiladi.

427. $y' = \frac{5}{\cos^2 x}$, differensial tenglama uchun $y(0)=3$ boshlang‘ich shartni qanoatlantiruvchi Koshi masalasini yeching.

Yechish. Berilgan differensial tenglamaning umumi yechimi topamiz: $y = \int \frac{5}{\cos^2 x} dx = 5 \operatorname{tg} x + C$. Endi boshlang‘ich shartdan foydalanib, $5 \operatorname{tg} 0 + C = 3$, bundan $C = 3$ kelib chiqadi. Demak, Koshi masalasining yechimi $y = 5 \operatorname{tg} x + 3$ bo‘ladi.

428. $x dx + y dy = 0$ differensial tenglamaning umumi yechimini toping.

Yechish. Berilgan tenglamani bevosita integrallaymiz:

$$\int x dx + \int y dy = C, \Rightarrow \frac{x^2}{2} + \frac{y^2}{2} = C, \Rightarrow x^2 + y^2 = C_1.$$

Bunda $C_1 = 2C$.

429. $\frac{dy}{dx} = x(1+y^2)$ tenglamaning umumi yechimini toping.

Yechish. O‘zgrauvchilarini ajratib $\frac{dy}{1+y^2} = x dx$ tenglamani hosil qilamiz. Bevosita integrallab,

$$\operatorname{arctg} y = \frac{x^2}{2} + C$$

tenglikka ega bo‘lamiz. Oxirgi tenglikdan

$$y = \operatorname{tg}\left(\frac{x^2}{2} + C\right)$$

umumi yechimni hosil qilamiz.

Quyidagi o‘zgaruvchilari ajraladigan differensial tenglamalarni yeching

430. $x(y^2 - 4)dx + ydy = 0.$

431. $y \cos x = \frac{y}{\ln y}, y(0) = 1.$

432. $y' = \operatorname{tg} x \cdot \operatorname{tg} y.$

433. $(1+x^2)dy + ydx = 0, y(1) = 1.$

434. $\ln \cos x dx + x \operatorname{tg} y dy = 0.$

435. $\frac{yy'}{x} + e^y = 0, y(1) = 0.$

$$436. \frac{y}{y'} = \ln y, \quad y(2) = 1.$$

$$437. y' + \sin(x+y) = \sin(x-y).$$

$$438. x\sqrt{1+y^2}dx + y\sqrt{1+x^2}dy = 0. \quad 439. y' = 2^{x-y}, \quad y(-3) = -5.$$

$$440. y' = \operatorname{sh}(x+y) + \operatorname{sh}(x-y). \quad 441. x(y^6+1)dx + y^2(x^4+1)dy = 0, \quad y(0) = 1$$

$$442. \frac{xdx}{x+1} + \frac{dy}{y} = 0.$$

$$443. \frac{dx}{x} + \frac{\operatorname{tg} y dy}{\ln \cos y} = 0.$$

$$444. \sqrt{1-y^2}dx + y\sqrt{1-x^2}dy = 0. \quad 445. (1+y^2)x dx - (1+x^2)y dy = 0.$$

27-§. Birinchi tartibli bir jinsli va bir jinsliga keltiriladigan differensial tenglamalar

$f(x,y)$ funksiya uchun $f(kx,ky)=k^\alpha f(x,y)$ tenglik bajarilsa, $f(x,y)$ funksiyaga α tartibli bir jinsli funksiya deyiladi, bunda α biror son. Masalan, $f(x,y) = xy - y^2$ funksiya uchun $f(kx,ky) = kx \cdot ky - (ky)^2 = k^2(xy - y^2)$ bo'lib, $f(x,y) = xy - y^2$ funksiya $\alpha=2$ tartibli bir jinsli funksiya bo'ladi. $f(x,y) = \frac{x^2 + y^2}{xy}$, $\alpha=0$ tartibli bir jinsli funksiyadir (buni tekshirib ko'ring).

Ta'rif. $y' = f(x,y)$ differensial tenglamada $f(x,y)$ funksiya nolinchi tartibli bir jinsli funksiya bo'lsa, bunday differensial tenglamaga **birinchi tartibli bir jinsli differensial tenglama** deyiladi. Bir jinsli tenglama $y = x \cdot t$ almashtirish bilan o'zgaruvchilari ajraladigan $xt' = f(1,t) - t$ differensial tenglamaga keltiriladi. Bu tenglamani o'zgaruvchilarini ajratib yechiladi.

$$\frac{dy}{dx} = \frac{ax + by + c}{a_1x + b_1y + c_1}, \quad (5)$$

tenglamada $c = c_1 = 0$ bo'lsa, (5) bir jinsli tenglamadan iborat.

c yoki c_1 lardan biri, yoki har ikkalasi noldan farqli bo'lsa, $x = x_1 + h$, $y = y_1 + k$ almashtirish bajaramiz.

U holda

$$\frac{dy}{dx} = \frac{dy_1}{dx_1}. \quad (6)$$

(5) tenglamani ko'rinishi quyidagicha bo'ladi:

$$\frac{dy_1}{dx_1} = \frac{ax_1 + by_1 + ah + bk + c}{a_1x_1 + b_1y_1 + a_1h + b_1k + c_1}, \quad (7)$$

h va k ni shunday tanlab olamizki,

$$\begin{cases} ah + bk + c = 0 \\ a_1h + b_1k + c_1 = 0 \end{cases} \quad (8)$$

tenglamalar o'rinli bo'lsin, ya'ni h va k larni (8) ni yechimi sifatida olamiz. Bu holda (7) dan $\frac{dy_1}{dx_1} = \frac{ax_1 + by_1}{a_1x_1 + b_1y_1}$ tenglama esa bir jinsli bo'ladi. Tenglamani yechib x va y o'zgaruvchiga $x_1 = x - h$, $y_1 = y - k$ formula yordamida qaytib (5) tenglamaning yechimini hosil qilamiz. Agar

$$\begin{vmatrix} a & b \\ a_1 & b_1 \end{vmatrix} = 0,$$

bo'lsa, ya'ni $ab_1 - a_1b = 0$ bo'lganda, ma'lumki (8) sistema yechimga ega bo'lmaydi. Ammo bu holda $\frac{a}{a_1} = \frac{b}{b_1} = \lambda$, ya'ni $a = \lambda a_1$, $b = \lambda b_1$ bo'ladi.

Bundan kelib chiqadiki, (5) tenglamani

$$\frac{dy}{dx} = \frac{(ax + by) + c}{\lambda(ax + by) + c_1} \quad (9)$$

ko'rinishga keltirish mumkin ekan. Bu holda $z = ax + by$ almashtirish yordamida (9) o'zgaruvchilari ajraladigan differensial tenglamaga keladi, haqiqatan

$$\frac{dz}{dx} = a + b \frac{dy}{dx} \text{ tenglikdan } \frac{dy}{dx} = \frac{1}{b} \frac{dz}{dx} - \frac{a}{b} \quad (10)$$

munosabatni hosil qilamiz hamda, avvalgi o'zgaruvchiga qaytib, o'zgaruvchilari ajraladigan $\frac{1}{b} \frac{dz}{dx} - \frac{a}{b} = \frac{z + c}{\lambda z + c_1}$ tenglamani hosil qilamiz.

446. $\frac{dy}{dx} = \frac{xy + y^2}{x^2}$ differensial tenglamaning umumiyl yechimini toping.

Yechish. $y = x \cdot t$ almashtirish orqali $y' = x't + xt' = t + xt'$ ekanligini hisobga olsak, berilgan tenglamadan $t + xt' = \frac{x + xt + x^2t^2}{x^2}$ bo'lib, $t + xt' = t + t^2$ yoki $xt' = t^2$, $\frac{xt'}{dx} = t^2$ bo'ladi. Tenglamada

o'zgaruvchilarni ajratsak, $\frac{dt}{t^2} = \frac{dx}{x}$ bo'ladi. Oxirgi tenglikni integrallasak, $-\frac{1}{t} = \ln|x| + \ln c$, bo'lib, $\ln|cx| = -\frac{1}{t}$, $t = \frac{y}{x}$ bo'lganligi uchun $\ln|cx| = -\frac{x}{y}$, yoki $y = -\frac{x}{\ln|cx|}$ umumiy yechimni hosil qilamiz.

$$447. \frac{dy}{dx} = \frac{x+y-3}{x-y-1} \text{ tenglamani yeching.}$$

Yechish. Tenglamani bir jinsli tenglamaga keltirish uchun $x = x_1 + h$, $y = y_1 + k$ almashtirish bajaramiz. U holda tenglama $\frac{dy_1}{dx_1} = \frac{x_1 + y_1 + h + k - 3}{x_1 - y_1 + h - k - 1}$ ko'rinishni oladi.

$$\begin{cases} h+k-3=0 \\ h-k-1=0 \end{cases}$$

sistemanini yechib, $h=2$, $k=1$ ekanligini topamiz. Natijada bir jinsli $\frac{dy_1}{dx_1} = \frac{x_1 + y_1}{x_1 - y_1}$ tenglamani hosil qilamiz. $y_1 = tx_1$ almashtirish orqali

$$\frac{dy_1}{dx_1} = t + x_1 \frac{dt}{dx_1} \Rightarrow t + x_1 \frac{dt}{dx_1} = \frac{1+t}{1-t} \Rightarrow x_1 \frac{dt}{dx_1} = \frac{1+t^2}{1-t} \Rightarrow \frac{1-t}{1+t^2} dt = \frac{dx_1}{x_1}$$

$$\arctgt - \frac{1}{2} \ln(1+t^2) = \ln|x_1| + \ln|c| \Rightarrow \arctgt = \ln \left| cx_1 \sqrt{1+t^2} \right|,$$

$$cx_1 \sqrt{1+t^2} = e^{\arctgt} \Rightarrow c \sqrt{x_1^2 + y_1^2} = e^{\arctgt \frac{x_1}{x_1}} \Rightarrow c \sqrt{(x-2)^2 + (y-1)^2} = e^{\arctgt \frac{y-1}{x-2}}.$$

$$448. \frac{dy}{dx} = \frac{2x+y-1}{4x+2y+5} \text{ tenglamaning yeching.}$$

Yechish. Tenglamani $x = x_1 + h$, $y = y_1 + k$ almashtirish yordamida yechib bo'lmaydi, chunki bu holda h va k aniqlashga yordam beradigan sistemaning determinanti $\begin{vmatrix} 2 & 1 \\ 4 & 2 \end{vmatrix} = 0$ bo'ladi.

Shuning uchun bu tenglamani $2x+y=z$ almashtirish yordamida yechimi topiladi. $y' = z' - 2$ bo'lgani uchun tenglama

$$z' - 2 = \frac{z-1}{2z+5} \Rightarrow z' = \frac{5z+9}{2z+5}$$

ko'rinishga keladi. Tenglamani yechib

$$\frac{2}{5}z + \frac{7}{25} \ln|5z+3| = x + C$$

ni hosil qilamiz. Dastlabki o'zgaruvchiga qaytib, quyidagi yechimni topamiz:

$$z = 2x + y \Rightarrow \frac{2}{5}(2x + y) + \frac{7}{25} \ln|10x + 5y + 9| = x + C,$$

$$10y - 5x + 7 \ln|10x + 5y + 9| = C_1.$$

Quyidagi bir jinsli differensial tenglamalarni yeching

449. $(x^2 + 2xy)dx + xydy = 0.$

450. $y' = \frac{y}{x} + \sin \frac{y}{x}, \quad y(1) = \frac{\pi}{2}.$

451. $xy' \sin \frac{y}{x} + x = y \sin \frac{y}{x}.$

452. $xy + y^2 = (2x^2 + xy)y'.$

453. $x_1 y' = y^2 + 2x^2.$

454. $y' = \frac{y}{x} + \cos \frac{y}{x}.$

455. $(x^2 + y^2)dx - xydy = 0.$

456. $(x + y + 2)dx + (2x + 2y - 1)dy = 0.$

457. $(2x + y + 1)dx + (x + 2y - 1)dy = 0.$

458. $2(x + y)dy + (3x + 3y - 1)dx = 0, \quad y(0) = 2.$

459. $(x - 2y + 3)dy + (2x + y - 1)dx = 0.$

460. $(x - y + 4)dy + (x + y - 2)dx = 0.$

28-§. Chiziqli differensial tenglamalar. Bernulli tenglamasi

1.Birinchi tartibli chiziqli differensial tenglamalar

$$\frac{dy}{dx} + p(x)y = q(x) \quad (11)$$

(11) tenglama chiziqli differensial tenglama bo'lib, $p(x)$ va $q(x)$ lar berilgan integrallanuvchi funksiyalar. Bu tenglamaning umumiy yechimi quyidagi formula bilan topiladi:

$$y = e^{-\int p(x)dx} \left[C + \int q(x)e^{\int p(x)dx} dx \right]. \quad (12)$$

1. Bernulli tenglamasi

$$y' + p(x)y = q(x)y^n, \quad n \neq 0, 1 \quad (13)$$

ko'rinishda bo'ladi. $n \neq 0,1$ o'zgarmas son. Bernulli tenglamarini y^n ga bo'lib,

$$\frac{y'}{y^n} + p(x) \frac{1}{y^{n-1}} = q(x) \Rightarrow \frac{1}{y^{n-1}} = z \Rightarrow z' = (1-n)y^{-n}y',$$

almashtirish bajarsak,

$$\frac{z'}{1-n} + p(x)z = q(x) \text{ yoki } z' + (1-n)p(x)z = (1-n)q(x)$$

birinchi tartibli chiziqli differensial tenglama hosil bo'ladi.

461. $y' + xy = x$ differensial tenglamaning umumiy yechimini toping.

Yechish. Berilgan tenglama birinchi tartibli chiziqli tenglama bo'lib $p(x) = x$, $q(x) = x$ ekanini hisobga olib (12) formulaga asosan,

$$y = e^{-\int \frac{xdx}{1-x}} \left[C + \int xe^{\int \frac{xdx}{1-x}} dx \right] = e^{\frac{x^2}{2}} \left[C + \int xe^{\frac{x^2}{2}} dx \right] = e^{\frac{x^2}{2}} \left[C + \int e^{\frac{x^2}{2}} d\left(\frac{x^2}{2}\right) \right] = e^{\frac{x^2}{2}} \left[e^{\frac{x^2}{2}} + C \right]. \Rightarrow y = 1 + Ce^{\frac{x^2}{2}}.$$

umumiy yechim bo'ladi.

462. $y' + xy = xy^3$ differensial tenglamaning umumiy yechimini toping.

Yechish. Berilgan tenglamani y^3 ga bo'lib, $\frac{y'}{y^3} + x \frac{1}{y^2} = x$ tenglamani hosil qilamiz. $\frac{1}{y^2} = z$ almashtirish orqali $z' = -\frac{2y'}{y^3}$ bo'ladi.

Bularni tenglamaga qo'yib, $-\frac{z'}{2} + xz = x \Rightarrow z' - 2xz = -2x$ chiziqli tenglamaga kelamiz. Bu tenglamaning umumiy yechimini (12) formulaga asosan topish mumkin:

$$z = e^{\int \frac{xdx}{1-x}} \left[C + \int (-2x)e^{-\int \frac{xdx}{1-x}} dx \right] = e^{x^2} \left[C - \int 2xe^{-x^2} dx \right] = e^{x^2} \left[C + \int e^{-x^2} d(-x^2) \right] = e^{x^2} \left[C + e^{-x^2} \right] = Ce^{x^2} + 1.$$

Shunday qilib $z = C \cdot e^{x^2} + 1$ bo'ladi, z ning o'trniga $\frac{1}{y^2}$ ni qo'yib,

$$\frac{1}{y^2} = C \cdot e^{x^2} + 1 \Rightarrow y^2 = \frac{1}{C \cdot e^{x^2} + 1},$$

yechimni olamiz. Bu berilgan Bernulli tenglamasining umumiy yechimi bo'ldi.

Quyidagi chiziqli va Bernulli tenglamalarini yeching

$$463. y' \cos^2 x + y = \operatorname{tg} x, \quad y(0) = 0. \quad 464. y' - y \cdot \operatorname{th} x = \operatorname{ch}^2 x.$$

$$465. y' + \frac{xy}{1-x^2} = \arcsin x + x. \quad 466. xy' - y = x^2 \cos x.$$

$$467. y' + 2xy = xe^{-x^2}. \quad 468. y' \cos x + y = 1 - \sin x.$$

$$469. y' + \frac{y}{x} = x^2 y^4. \quad 470. 4xy' + 3y = -e^x x^4 y^5.$$

$$471. y' + \frac{2y}{x} = 3x^2 y^{4/3}. \quad 472. y' - \frac{y}{x-1} = \frac{y^2}{x-1}.$$

$$473*. (x^2 \ln y - x)y' = y.$$

$$474*. ydx + (x + x^2 y^2)dy = 0.$$

$$475*. y' + \frac{3x^2 y}{x^3 + 1} = y^2 (x^3 + 1) \sin x, \quad y(0) = 1.$$

29-§. To'la differensialli tenglamalar va integrallovchi ko'paytuvchi

1. To'la differensialli tenglama

$$M(x, y)dx + N(x, y)dy = 0 \quad (14)$$

ko'rinishdagи tenglamaning chap qismi biror $u(x, y)$ funksiyaning to'liq differensiali, ya'ni $du(x, y) = M(x, y)dx + N(x, y)dy$ bo'lsa, bunday tenglama to'la differensialli tenglama deyiladi. (14) tenglama to'la differensialli tenglama bo'lishi uchun quyidagi shart bajarilishi kerak:

$$\frac{\partial M}{\partial y} = \frac{\partial N}{\partial x}. \quad (15)$$

To'la differensialli tenglamaning umumiy yechimi quyidagi formula bilan topiladi:

$$u(x, y) = \int M(x, y)dx + \int \left[N(x, y) - \int \frac{\partial M}{\partial y} dx \right] dy + C.$$

2. Integrallovchi ko'paytuvchi

(14) tenglamaning chap tomoni biror funksiyaning to'la differensiali bo'lmasin, ya'ni (15) shart bajarilmasin. Ayrim hollar da shunday $u(x, y)$ funksiyani tanlab olish mumkin bo'ladiki, berilgan tenglamani bu funksiyaga ko'paytirilganda, uning chap

tomoni biror funksiyaning to'la differensiali bo'lishi mumkin. Bunday $\mu(x,y)$ funksiyaga berilgan tenglamaning integrallovchi ko'paytuvchisi deyiladi. Integrallovchi ko'paytuvchini topish uchun, berilgan tenglamani hozircha noma'lum bo'lgan $\mu(x,y)$ ga ko'paytirib, $\mu M(x,y)dx + \mu N(x,y)dy = 0$ tenglamani hosil qilamiz. Oxirgi tenglama to'la differensialli bo'lishi uchun $\frac{\partial(\mu M)}{\partial y} = \frac{\partial(\mu N)}{\partial x}$ tenglik o'rinali bo'lishi kerak. Bunda $\mu(x,y)$ quyidagicha topiladi:

$$1) \frac{\frac{\partial M}{\partial y} - \frac{\partial N}{\partial x}}{N} = \Phi(x) \text{ bo'lganda, } \ln \mu = \int \Phi(x) dx \quad (16)$$

ko'rinishida topiladi.

$$2) \frac{\frac{\partial N}{\partial x} - \frac{\partial M}{\partial y}}{M} = \Phi(y) \text{ bo'lganda, } \ln \mu = \int \Phi(y) dy \quad (17)$$

ko'rinishida topiladi.

476. Ushbu $\frac{x^2 - 3y^2}{x^4} dx + \frac{2y}{x^3} dy = 0$ differensial tenglamaning umumiy yechimini toping.

Yechish. Berilgan tenglamani to'la differensialli bo'lish yoki bo'lmasligini tekshiramiz:

$$\text{tenglamada } M = \frac{x^2 - 3y^2}{x^4}, \quad N = \frac{2y}{x^3} \text{ bo'lganligi uchun}$$

$$\frac{\partial M}{\partial y} = -\frac{6y}{x^4}, \quad \frac{\partial N}{\partial x} = -\frac{6y}{x^4}$$

bo'lib, $\frac{\partial M}{\partial y} = \frac{\partial N}{\partial x}$ (15) shart bajariladi, ya'ni berilgan differensial tenglama to'la differensialli tenglamadir. Demak, berilgan tenglamaning chap tomoni biror $u(x,y)$ funksiyaning to'liq differensiali bo'ladi. Bundan esa,

$$\frac{\partial u}{\partial x} = \frac{x^2 - 3y^2}{x^4}, \quad \frac{\partial u}{\partial y} = \frac{2y}{x^3}.$$

Endi $u(x,y)$ funksiyani topamiz, 1-tenglikdan:

$$u = \int \frac{x^2 - 3y^2}{x^4} dx + \varphi(y) = \int (x^{-2} - 3y^2 x^{-4}) dx + \varphi(y) = -\frac{1}{x} + \frac{y^2}{x^3} + \varphi(y),$$

bo‘lib, bunda $\varphi(y)$ hozircha noma’lum funksiyadir. Oxirgi tenglikni y bo‘yicha differensiallab, $\frac{\partial u}{\partial y} = N = \frac{2y}{x^3}$ ekanligini hisobga olib, $\frac{2y}{x^3} + \varphi'(y) = \frac{2y}{x^3}$ tenglikni hosil qilamiz. Bundan $\varphi'(y) = 0$ bo‘lib, $\varphi(y) = C_1$ bo‘ladi. Demak,

$$u(x, y) = -\frac{1}{x} + \frac{y^2}{x^3} + C.$$

477. $(y + xy^2)dx - xdy = 0$ differensial tenglamaning umumi yechimini toping.

Yechish. Berilgan tenglamaning to‘la differensialli yoki to‘la differensialli emasligini tekshiramiz. $\frac{\partial M}{\partial y} = (y + xy^2)' = 1 + 2xy$, $\frac{\partial N}{\partial x} = (-x)' = -1$.

Demak, $\frac{\partial M}{\partial y} = \frac{\partial N}{\partial x}$ tenglik bajarilmaydi. (16), (17) nisbatlarni tekshiramiz:

$$\frac{\frac{\partial M}{\partial y} - \frac{\partial N}{\partial x}}{N} = \frac{1 + 2x + 1}{-x} = -2 - \frac{2}{x} \neq \Phi(x), \quad \frac{\frac{\partial N}{\partial x} - \frac{\partial M}{\partial y}}{M} = \frac{-1 - 1 - 2xy}{y + xy^2} = -\frac{2}{y} = \Phi(y).$$

Demak, $\mu(y) = e^{-\int \frac{2}{y} dy} = e^{-2\ln y} = e^{\ln y^{-2}} = \frac{1}{y^2}$, hosil bo‘ladi. Berilgan tenglamani $\mu(y) = \frac{1}{y^2}$ funksiyaga ko‘paytirsak, quyidagiga ega bo‘lamiz:

$$\left(\frac{1}{y} + x \right) dx - \frac{x}{y^2} dy = 0,$$

bu tenglama uchun $\frac{\partial(\mu M)}{\partial y} = \frac{\partial(\mu N)}{\partial x} = -\frac{1}{y^3}$ tenglik bajariladi, ya’ni oxirgi differensial tenglama to‘la differensialli tenglamadir.

Tenglamani yechib,

$$\frac{x}{y} + \frac{x^2}{2} + C = 0 \Rightarrow y = \frac{2x}{2C - x^2}.$$

umumi integralni topdik.

Quyidagi differensial tenglamalarni to‘la differensialga tekshiring va umumi yechimlarini toping

$$478. (e^x + y + \sin y)dx + (e^y x + x \cos y)dy = 0.$$

$$479. (x + y - 1)dx + (e^y + x)dy = 0.$$

$$480. (x \cos y - y \sin y)dy + (x \sin y + y \cos y)dx = 0.$$

$$481. 2xydx + (x^2 - y^2)dy = 0.$$

$$482. (2 - 9xy^2)xdx + (4y^2 - 6x^3)ydy = 0.$$

$$483. \frac{y}{x}dx + (y^3 + \ln x)dy = 0.$$

$$484. (10xy - 8y + 1)dx + (5x^2 - 8x + 3)dy = 0.$$

$$485. 3x^2(1 + \ln y)dx - \left(2y - \frac{x^3}{y}\right)dy = 0.$$

$$486. 2x \cos^2 y dx + (2y - x^2 \sin^2 y)dy = 0.$$

$$487. \left(4 - \frac{y^2}{x^2}\right)dx + \frac{2y}{x}dy = 0. \quad 488. 3x^2 e^y dx + (x^3 e^y - 1)dy = 0.$$

$$489. e^{-y}dx + (1 - xe^{-y})dy = 0.$$

Quyidagi differensial tenglamalarni to'la differensialga tekshiring va umumiy yechimlarini toping

$$490. (x^2 - y)dx + xdy = 0. \quad 491. y^2 dx + (yx - 1)dy = 0.$$

$$492. (x^2 + y^2 + x)dx + ydy = 0. \quad 493. xy^2(xy' + y) = 1.$$

$$494. (x^2 + 3\ln y)ydx - xdy = 0. \quad 495. ydx - (x + y^2)dy = 0.$$

$$496. (e^{2x} - y^2)dx + ydy = 0. \quad 497. (1 + 3x^2 \sin y)dx - xctydy = 0.$$

$$498*. (\sin x + e^y)dx + \cos x dy = 0. \quad 499*. 2xtgydx + (x^2 - 2\sin y)dy = 0.$$

30-§. Hosilaga nisbatan yechilmagan birinchi tartibli differensial tenglamalar

Ta'rif.

$$F\left(x, y, \frac{dy}{dx}\right) = 0 \quad (18)$$

ko'rinishdagi tenglamalar hosilaga nisbatan yechilmagan 1-tartibli differensial tenglamalar deb ataladi.

Bunday ko'rinishdagi tenglamalarni $\frac{dy}{dx}$ ga nisbatan yechib olish maqsadga muvofiq bo'ladi, ya'ni berilgan tenglamani

$$\frac{dy}{dx} = f_i(x, y), \quad i = 1, 2, \dots, n, \quad (19)$$

ko'rinishga keltiriladi. Ammo har doim ham (18) tenglamani $\frac{dy}{dx}$ ga nisbatan yechib olish mumkin bo'lavermaydi, undan tashqari y' ga nisbatan yechishdan hosil bo'lgan (19) ko'rinishdagi tenglamalar har doim ham oson integrallanmaydi. Shunung uchun (19) ko'rinishdagi tenglamani ko'pincha yangi parametr kiritish yo'li bilan yechiladi. Shu usullarning biri bilan tanishib chiqamiz.

Faraz qilaylik (18) tenglamani y yoki x ga nisbatan oson yechish mumkin bo'lzin. Masalan, uni $y = f(x, y')$ ko'rinishida yozib olish mumkin bo'lzin. $\frac{dy}{dx} = p$ parametr kiritib, $y = f(x, p)$ ni hosil qilamiz. Oxirgi tenglikning ikki tomonidan to'la differensial olib, hamda $dy = pdx$ ga almashtirib

$$pdx = \frac{\partial f(x, p)}{\partial x} dx + \frac{\partial f(x, p)}{\partial p} dp,$$

ya'ni $M(x, p)dx + N(x, p)dp = 0$ tenglamani hosil qilamiz. Agar bu tenglamani yechib $x = \Phi(p, C)$ yechimni topsak, u holda berilgan tenglamaning yechimi

$$\begin{cases} x = \Phi(p, C), \\ y = f(x, p), \end{cases}$$

parametrik ko'rinishda bo'ladi.

Dastlabki (18) tenglama uchun $y(x_0) = y_0$ Koshi masalasi (x_0, y_0) nuqtadan o'tuvchi va bu nuqtada umumiy urinmaga ega bo'lgan (18) tenglamaning ikki integral egri chizig'i mavjud bo'lma-gandagina yagona yechimga ega bo'ladi. Aks holda Koshi masalasi yechimining yagonaligi buziladi, ya'ni (x_0, y_0) nuqta Koshi masalasi yechimining yagonaligi buziladigan nuqta bo'ladi.

(18) tenglama uchun Koshi masalasining yechimining mavjudligi va yagonaligini yetarlilik shartini quyidagi teorema aniqlab beradi.

Teorema. y_0 soni $F(x_0, y_0, y'_0) = 0$ tenglamaning yechimlaridan biri bo'lsin. Faraz qilaylik $F(x, y, y')$ funksiya x ga nisbatan uzlusiz, y va y' bo'yicha uzlusiz differensiallanuvchi hamda uning y' bo'yicha hosilasi noldan farqli bo'lsin:

$$\frac{\partial F(x_0, y_0, y'_0)}{\partial y'} \neq 0.$$

U holda $F(x, y, y') = 0$, $y(x_0) = y_0$ Koshi masalasining x_0 nuqtanining yetarlicha kichik atrofida $\varphi'(x_0) = y'_0$ shartni qanoatlantiruvchi $y = \varphi(x)$ yagona yechim mavjud bo'ladi.

Hosilaga nisbatan yechilgan tenglama kabi (18) ko'rinishdagi tenglamalar ham maxsus yechimlarga ega bo'lishi mumkin, bu integral chiziqlar faqat yagonalik sharti bajarilmaydigan nuqtalardan iborat bo'ladi.

Agar $F(x, y, y')$ funksiya x ga nisbatan uzlusiz hamda y va y' ga nisbatan uzlusiz differensiallanuvchi bo'lsa, (18) tenglamaning maxsus yechimi, agar u mavjud bo'lsa,

$$\begin{cases} F(x, y, y') = 0, \\ \frac{\partial F(x, y, y')}{\partial y'} = 0, \end{cases} \quad (20)$$

tenglamalar sistemasini qanoatlantiradi.

Shuning uchun, (18) tenglamaning maxsus yechimlarini topish uchun (20) sistemasidan y' ni yo'qotish kerak bo'ladi.

$$500. (y')^3 - 2x(y')^2 + y' = 2x \text{ tenglamani yeching.}$$

Yechish. Berilgan tenglama

$$(y')^3 - 2x(y')^2 + y' - 2x = (y' - 2x)((y')^2 + 1) = 0$$

bo'lgani uchun $y' - 2x = 0$ tenglamaga ekvivalent. Uning yechimlari $y = x^2 + C$ ko'rinishga ega.

$$501. (y')^2 + y(y-x)y' - xy^3 = 0 \text{ tenglamani yeching.}$$

Yechish. Berilgan tenglama $(y' + y^2)(y' - xy) = 0$ bo'lgani uchun $y' + y^2 = 0$ va $y' - xy = 0$ tenglamalar ko'paytmasiga ekvivalent.

Ulardan birinchisining yechimi $y = 0$ va $y = \frac{1}{x+C}$ ikkinchisiniki esa

$$y = Ce^{\frac{x^2}{2}}.$$

Demak, berilgan tenglamaning yechimi

$$\left(y - \frac{1}{x+C} \right) \left(y - Ce^{\frac{x^2}{2}} \right) = 0$$

502. $y = (y')^2 e^y$ tenglamani yeching.

Yechish. Berilgan tenglamaga $p = y' = \frac{dy}{dx}$ parametr kiritamiz. U

holda

$$y = p^2 e^p, \quad dy = (2pe^p + p^2 e^p)dp.$$

Bu yerda $p=0$ yoki $x = 2e^p + e^p(p-1) + C = e^p(p+1) + C$.

Demak, berilgan tenglama yechimlari:

$$p=0 \text{ va } \begin{cases} x = e^p(p+1) + C, \\ y = p^2 e^p. \end{cases}$$

503. $\ln y' + \sin y' - x = 0$ tenglamani yeching.

Yechish. Berilgan tenglamaga $y' = p, \quad \frac{dy}{dx} = p, \quad dy = pdx$ parametr

kiritamiz. U holda $x = \ln p + \sin p$, yoki $\frac{dy}{p} = dx \Rightarrow \frac{dy}{p} = \left(\frac{1}{p} + \cos p \right) dp$.

Bundan $y = \int (1 + p \cos p) dp = p + \cos p + p \sin p + C$. Demak, yechim:

$$\begin{cases} x = \ln p + \sin p, \\ y = p + \cos p + p \sin p + C. \end{cases}$$

504. $(y')^2 + (x+a)y' - y = 0$ tenglamani yeching.

Yechish. Berilgan tenglamaga $p = y'$ parametr kiritamiz. U holda $y = p^2 + (x+a)p, \quad dy = pdx$ va $dy = 2pd p + (x+a)dp + pdx$ tenglamani hosil qilamiz. Bu yerda $p=C$ yoki $2p+x+a=0$ tenglamalar kelib chiqadi. Bundan esa berilgan tenglamaning yechimi quyidagicha bo'ladi:

$$y = (x+a)C + C^2 \text{ va } \begin{cases} y = p^2 + (x+a)p, \\ 2p+x+a=0, \end{cases} \Rightarrow \begin{cases} y = p^2 + (x+a)p, \\ p = -\frac{x+a}{2}. \end{cases}$$

p ning qiymatini tenglamaga olib borib qo'ysak, $y = (x+a)C + C^2$ va

$y = -\frac{(x+a)^2}{4}$ ekani kelib chiqadi.

Quyidagi differensial tenglamalarni yeching

$$505. (y')^2 = y^3 - y^2.$$

$$506. (y')^2 + y^2 (\ln^2 y - 1).$$

$$507. (y')^3 + x(y')^2 - y = 0.$$

$$508. x(y')^3 - y(y')^2 + 1 = 0.$$

$$509. x(y')^2 + xy' - y = 0.$$

$$510. y(y')^2 - 2xy' + y = 0.$$

$$511. x^2(y')^2 - 2xyy' - x^2 = 0.$$

$$512. x^4(y')^2 - xy' - y = 0.$$

$$513*. (3x+1)(y')^2 - 3(y+2)y' + 9 = 0.$$

$$514*. \ln y' + 2(xy' - y) = 0.$$

31-§. n -darajali 1-tartibli differensial tenglama

Chap tomoni y' ga nisbatan butun ratsional funksiyalardan iborat bo‘lgan quyidagi

$$(y')'' + P_1(y')^{n-1} + P_2(y')^{n-2} + \dots + P_{n-1}y' + P_n y = 0 \quad (21)$$

ko‘rinishga ega bo‘lgan tenglama **n -darajali 1-tartibli** differensial tenglama deyiladi. Bu yerda n butun musbat son, P_1, P_2, \dots, P_n lar x va y ning funksiyalari.

Bu tenglamani y' ga nisbatan yecha olamiz, deb faraz qilaylik. Bunda y' uchun, umuman aytganda, n ta har xil ifoda hosil bo‘ladi:

$$y' = f_1(x, y), \quad y' = f_2(x, y), \dots, \quad y' = f_n(x, y). \quad (22)$$

Bu holda

$$F(x, y, y') = 0 \quad (23)$$

tenglamani integrallash 1-tartibli n ta

$$y' = f(x, y) \quad (24)$$

tenglamani integrallashga keltiriladi. Ularning integrallari mos ravishda quyidagilar bo‘lsin:

$$\Phi_1(x, y, C_1) = 0, \quad \Phi_2(x, y, C_2) = 0, \dots, \quad \Phi_n(x, y, C_n) = 0. \quad (25)$$

Agar (25) tenglamalarni y' ga nisbatan yechadigan bo‘lsak (23) tenglamaning yechimini hosil qilamiz.

$$515. (y')^2 - \frac{xy}{a^2} = 0 \text{ tenglamani yeching.}$$

Yechish. Berilgan tenglamani $\left(y' - \frac{\sqrt{xy}}{a}\right)\left(y' + \frac{\sqrt{xy}}{a}\right) = 0$ ko‘ri-nishda yozib olamiz. U holda $y' - \frac{\sqrt{xy}}{a} = 0$ va $y' + \frac{\sqrt{xy}}{a} = 0$. Bu tenglamalarni yechimlari

$$\sqrt{y} - \frac{x\sqrt{x}}{3a} - C = 0 \text{ va } \sqrt{y} + \frac{x\sqrt{x}}{3a} - C = 0.$$

Shuning uchun berilgan tenglamaning umumiy yechimi ushbu ko‘rinishda bo‘ladi:

$$\left(\sqrt{y} - C\right)^2 - \frac{x^3}{9a^2} = 0.$$

Quyidagi tenglamalarni yeching

$$516. (y')^3 - 2x(y')^2 + y' = 2x. \quad 517. (y')^2 + y(y-x)y' - xy^3 = 0.$$

$$518. (y')^2 + (\sin x - 2xy)y' - xy^3 = 0. \quad 519. (y')^2 = 4.$$

$$520. (y')^2 + y^2 - 1 = 0. \quad 521. x(y')^2 = y.$$

$$522. (y')^2 - y^2 = 0. \quad 523. 8(y')^3 = 27y.$$

$$524. (y')^2 - 4y^3 = 0. \quad 525. y^2(y'^2 + 1) = 1.$$

$$526*. (y'+1)^3 = 27(x+y)^2. \quad 527*. x(y')^2 - 2yy' + 4x = 0.$$

32-§. Argument oshkor holda qatnashmagan va funksiya oshkor holda qatnashmagan differensial tenglamalar

$F(y, y') = 0$ tenglamadan y ni, $F(x, y') = 0$ tenglamadan x ni hamda $y' = p$ ni t parametr orqali ifodalash mumkin, deb faraz qilamiz. U holda tenglamalar yechimlari parametrik shaklda kelib chiqadi. Masalan, $F(y, p) = 0$ tenglamani ko‘raylik. $y = \varphi(t)$ deb tenglash yordamida $p = \psi(t)$ ni topdik deb faraz qilaylik. U holda bir tomonidan $dy = pdx = \psi(t)dx$ ikkinchi tomondan $dy = \varphi'(t)dt$, har ikki tenglikdan

$$\psi(t)dx = \varphi'(t)dt \Rightarrow dx = \frac{\varphi'(t)}{\psi(t)}dt \Rightarrow x = \int \frac{\varphi'(t)}{\psi(t)}dt + C$$

Umumiy yechim parametrik shaklda quyidagicha yoziladi:

$$\begin{cases} x = \int \frac{\varphi'(t)}{\psi(t)} dt, \\ y = \varphi(t). \end{cases}$$

528. $y = a\sqrt{1+(y')^2}$ tenglamaning umumiy yechimini toping.

Yechish. Tenglamada $p = y' = sh t$ deb olamiz, u holda tenglamani ko'rinishi $y = a\sqrt{1+sh^2 t} = acht$ bo'ladi.

$$\frac{dy}{dx} = p \Rightarrow dx = \frac{dy}{p} = \frac{asht}{sh t} dt = adt, \text{ yani } dx = adt \Rightarrow x = at - C.$$

Umumiy yechim parametrik shaklda $\begin{cases} x = at - C, \\ y = acht, \end{cases}$ bo'ladi.

$t = \frac{x+C}{a}$ ekanini e'tiborga olsak, umumiy yechim: $y = a \operatorname{ach} \frac{x+C}{a}$.

Quyidagi tenglamalarni yeching

$$529. x((y')^2 - 1) = 2y'.$$

$$530. y'(x - \ln y') = 1.$$

$$531. x = (y')^3 + y'$$

$$532. x = \sqrt{(y') + 1}.$$

$$533. y = (y')^2 + 2(y')^3.$$

$$534. y = \ln(1 + (y')^2).$$

$$535. y = (y' - 1)e^y.$$

$$536*. (y' + 1)^3 = (y' - y)^2.$$

$$537**. (y')^4 - (y')^2 = y^2.$$

$$538*. 2y(y' + 1) = x(y')^2.$$

33-§. Lagranj va Klero tenglamalari

1. Lagranj tenglamasi. Ushbu

$$y = x\varphi(y') + \psi(y') \quad (26)$$

tenglamani Lagranj tenglamasi deyiladi, bu yerda $\varphi(y')$, $\psi(y')$ lar y' ning ma'lum funksiyalari. Bunday tenglama ham p parametr kiritish usuli bilan yechiladi. $y' = p(x)$ deb belgilaymiz. U holda tenglama ushbu ko'rinishga keladi:

$$y = x\varphi(p) + \psi(p) \quad (27)$$

Bu tenglamani x bo'yicha differensiallab,

$$p = \varphi(p) + [x\varphi'(p) + \psi'(p)] \frac{dp}{dx} \text{ yoki } p - \varphi(p) = [x\varphi'(p) + \psi'(p)] \frac{dp}{dx} \quad (28)$$

tenglamani hosil qilamiz. $p - \varphi(x) \neq 0$ va $p - \psi(x) \neq 0$ bo'lgan hollarni qaraymiz.

a) $p - \varphi(x) \neq 0$ bo'lsin. (28) tenglamani $\frac{dp}{dx}$ ga nisbatan quyidagi ko'rinishda yozamiz:

$$\frac{dx}{dp} - x \frac{\varphi'(p)}{p - \varphi(p)} = \frac{\psi'(p)}{p - \varphi(p)}.$$

Hosil qilingan tenglama x va $\frac{dx}{dp}$ ga nisbatan chiziqlidir, demak,

$$x = \Phi(p, C) \quad (29)$$

umumi yechimga ega. (29) ni (27) ga qo'yib y ni p va C orqali ifodalaymiz:

$$y = \Phi(p, C)\varphi(p) + \psi(p) = f(p, C). \quad (30)$$

(29) va (30) bizga Lagranj tenglamasining umumi yechimini parametrik ko'rinishda beradi:

$$\begin{cases} x = \Phi(p, C), \\ y = f(p, C). \end{cases}$$

Bu sistemadan p parametrimi yo'qotib, Lagranj tenglamasining umumi yechimini quyidagi ko'rinishda hosil qilamiz.

$$F(x, y, C) = 0.$$

Tenglananing umumi yechimidan hosil bo'lmaydigan maxsus yechimi ham bo'lishi mimkin.

b) $p = \varphi(x) = 0$ bo'lsin, ya'ni biror $p = p_0$ da $\varphi(p_0) = p_0$ bo'lsin. Ushbu

$$\begin{cases} y = x\varphi(p) + \psi(p), \\ p = p_0, \end{cases}$$

sistemada p ni p_0 bilan almashtirib $y = x\varphi(p_0) + \psi(p_0)$ yechimni hosil qilamiz. Bu esa Lagranj tenglamasining maxsus yechimi bo'ladi.

539. Ushbu $y = x + (y')^3$ Lagranj tenglamasining umumi va maxsus yechimlarini toping.

Yechish. Tenglamada $y' = p(x)$ deb olamiz, u holda tenglamaning ko'rinishi

$$y = x + p^3 \quad (31)$$

hosil bo'ladi. (31) ni x bo'yicha differensiallaymiz:

$$p = 1 + 3p^2 \frac{dp}{dx} \Rightarrow p - 1 = 3p^2 \frac{dp}{dx}.$$

a) $p - 1 \neq 0$ bo'lsa, ushbu $dx = \frac{3p^2}{p-1} dp$ tenglamani integrallab

quyidagini hosil qilamiz:

$$x = 3 \left(\ln|p-1| + p + \frac{p^2}{2} \right), \quad (32)$$

x ning hosil qilingan ifodasini (31) ga qo'yamiz:

$$y = 3 \left(\ln|p-1| + p + \frac{p^2}{2} \right) + p^3 + C.$$

(31) va (32) lar Lagranj tenglamasining umumiy yechimining parametrik ko'rinishini beradi.

b) $p - 1 = 0$ bo'lsa, $p = 1$ qiymatni (31) tenglamaga qo'yib, $y = x + 1$ maxsus yechimni hosil qilamiz.

2. Klero tenglamasi. Bu tenglama Lagranj tenglamasining $\varphi(y') = y'$ bo'lgan holiga aytildi. Klero tenglamasining umumiy ko'rinishi quyidagicha bo'ladi:

$$y = xy' + \psi(y'). \quad (33)$$

$y' = p(x)$ deb olsak, (33) tenglama quyidagi ko'rinishga keladi:

$$y = xp + \psi(p). \quad (34)$$

x bo'yicha differensiallab, quyidagini topamiz:

$$y' = p + x \frac{dp}{dx} + \psi'(p) \frac{dp}{dx} \Rightarrow \frac{dp}{dx} [x + \psi'(p)] = 0$$

bu yerda $\frac{dp}{dx} = 0$ yoki

$$x + \psi'(p) = 0. \quad (35)$$

$\frac{dp}{dx} = 0$ tenglamadan $p = C$ kelib chiqadi. (34) da p o'tniga C ni

qo'yib, Klero tenglamasining umumiy yechimini hosil qilamiz:

$$y = Cx + \psi(C). \quad (36)$$

Bu geometrik nuqtayi nazardan to'g'ri chiziqlar oilasini tasvirlaydi. (35) tenglama (34) bilan birgalikda Klero tenglamasining parametrik shakldagi yechimini ifodalaydi:

$$\begin{cases} x = -\psi'(p), \\ y = -p\psi'(p) + \psi(p). \end{cases}$$

Haqiqatan ham, bu tenglamadan: $dx = -\psi''(p)dp$.

$$dy = [-p\psi''(p) - \psi'(p)]dp = -p\psi''(p)dp, \text{ bu yerda } \frac{dp}{dx} = p.$$

Buni Klero tenglamasiga qo'ysak $-p\psi'(p) - \psi(p) = -p\psi''(p) - \psi(p)$ ayniyatga olib keladi.

Sistemaning ikkala tenglamasida p parametrni yo'qotib (33) tenglamaning integrali $\Phi(x, y) = 0$ ni hosil qilamiz. Bu integralda C ishtirok etmaydi, binobarin, u umumiyl integral bo'la olmaydi. Uni, shuningdek, umumiyl integraldan C ning hech qanday qiymatlarida hosil qilib bo'lmaydi, chunki u maxsus integral deyiladi.

540. Ushbu $y = xy' + y' - (y')^2$ Klero tenglamasining umumiyl va maxsus yechimlarini toping.

Yechish. Klero tenglamasining umumiyl yechimini y' ni C bilan almashtirib topamiz:

$$y = Cx + C - C^2.$$

Bu tenglamani C bo'yicha differensiallaymiz:

$$0 = x + 1 - 2C.$$

Quyidagi

$$\begin{cases} y = Cx + C - C^2, \\ 0 = x + 1 - 2C, \end{cases}$$

sistemadan C ni yo'qotib,

$$y = \frac{1}{4}(x+1)^2$$

maxsus yechimni hosil qilamiz. U parabola bilan

$$y = Cx + C - C^2$$

umumiyl yechimlar oilasining o'ramasini tashkil qiladi.

Quyidagi klero tenglamalarining umumiyl va maxsus integrallarini toping

$$541. y = xy' - (y')^2.$$

$$542. y = 2xy' - \frac{1}{y'}.$$

$$543. 2y = \frac{x(y')^2}{y' + 2}.$$

$$544. y = x(y')^2 + (y')^2.$$

$$545. y' + y = x(y')^2.$$

$$546*. y + xy' = 4\sqrt{y'}.$$

$$547*. y = x(y')^2 - 2(y')^3.$$

$$548*. 2xy' - y = \ln y'.$$

$$549. xy' - y = \ln y'.$$

$$551. y = xy' - a\sqrt{1+(y')^2}.$$

$$553. 2(y')^2(y - xy') = 1.$$

$$555. y = xy' - (2 + y').$$

$$557*. \sqrt{(y')^2 + 1} + xy' - y = 0$$

$$550. y = xy' - (y')^2.$$

$$552. y = xy' + \frac{1}{2y}.$$

$$554. y = xy' - e^y.$$

$$556. (y')^3 = 3(xy' - y).$$

$$558*. y = x\left(\frac{1}{x} + y'\right) + y'.$$

34-§. Rikkati tenglamasi

Ushbu

$$\frac{dy}{dx} = P(x)y^2 + Q(x)y + R(x) \quad (37)$$

ko'rinishdagi tenglama Rikkatining umumiy tenglamasi deyiladi. Bu yerda $P(x)$, $Q(x)$, $R(x)$ – biror $a < x < b$ oraliqda o'zgaruvchi x ning uzuksiz funksiyalari ($-\infty < a, b < \infty$).

Tenglamada $P(x)=0$ bo'lsa, chiziqli tenglama; $R(x)=0$ bo'lsa Bernulli tenglamasi hosil bo'ladi.

O'zgaruvchlarni quyidagicha almashtirish natijasida Rikkati tenglamasi o'z ko'rinishini saqlaydi:

1) x erkli o'zgaruvchini ixtiyoriy $x = \varphi(x_1)$ ko'rinishda (φ -differensiallanuvchi funksiya) o'zgarish natijasida tenglamani ko'rishi o'zgarmaydi.

Haqiqatan ham, (37) tenglamada bu almashtirishni bajarib, yana Rikkati tenglamasini olamiz:

$$\frac{dy}{dx} = P[\varphi(x_1)]\varphi'(x_1)y^2 + Q[\varphi(x_1)]\varphi'(x_1)y + R[\varphi(x_1)]\varphi'(x_1),$$

$$2) y$$
 erksiz o'zgaruvchini kasr chiziqli $y = \frac{\alpha y_1 + \beta}{\gamma y_1 + \delta}$ ko'rinishda ($\alpha, \beta, \gamma, \delta$ qaralayotgan oraliqda $\alpha\delta - \beta\gamma \neq 0$ shartni qanoatlantiruvchi x ning ixtiyoriy differensiallanuvchi funksiyaları) almashtirish natijasida ham tenglama o'z ko'rinishini saqlaydi:

$$\frac{dy}{dx} = \frac{\left(\alpha \frac{dy_1}{dx} + \alpha'y_1 + \beta'\right) \cdot (\gamma y_1 + \delta) - \left(\gamma \frac{dy_1}{dx} + \gamma'y_1 + \delta'\right)(\alpha y_1 + \beta)}{(\gamma y_1 + \delta)^2} =$$

$$= \frac{(\alpha\delta - \beta\gamma) \frac{dy_i}{dx} + (\alpha'\gamma - \gamma'\alpha) y_i^2 + (\alpha'\delta + \beta'\gamma - \alpha\delta' - \beta\gamma') y_i + (\beta'\delta - \delta'\beta)}{(\gamma y_i + \delta)^2}.$$

Erkli o'zgaruvchini x yoki erksiz o'zgaruvchini y ning bunday shakl almashtirishlarini bajarib, Rikkati tenglamasi soddarоq ko'rinishga keltiriladi.

1) Tenglamada y^2 oldidagi koeffitsiyentni $y = w(x)z$ chiziqli almashtirish bajarib ± 1 ga tenglashtirish mumkin. Bu yerda $w(x)$ hozircha noma'lum funksiya. U holda (37) tenglama quyidagi ko'rinishni oladi:

$$w \frac{dz}{dx} + zw' = P(x)w^2 z^2 + Q(x)wz + R(x)$$

yoki

$$\frac{dz}{dx} = P(x)wz^2 + \left(Q(x) - \frac{w'}{w} \right) z + \frac{R(x)}{w}.$$

Agar $w = \pm \frac{1}{P(x)}$ deb olinsa, tenglama quyidagi holga keladi:

$$\frac{dz}{dx} = \pm z^2 + \left(Q(x) - \frac{P'}{P} \right) z \pm P(x) \cdot R(x).$$

Bu almashtirish x ning $P(x) \neq 0$ bo'lgan o'zgartirish oraligi uchun o'rnili.

2) Tenglamada qidirilayotgan y funksiya oldidagi koeffitsiyentni $y = u + \alpha(x)$ almashtirish bajarsak (37) tenglamani ko'rinishi, quyidagicha bo'лади:

$$\frac{du}{dx} = P(x)u^2 + [Q(x) + 2P(x)\alpha(x)]u + R(x) + P(x)\alpha^2(x).$$

u oldidagi koeffitsiyentning 0 ga teng bo'lishi uchun

$$\alpha(x) = \frac{Q(x)}{2P(x)}, \quad (P(x) \neq 0)$$

ko'rinishda tanlab olish kifoyadir.

Keltirilgan almashtirishlarni o'miga qo'yib, Rikketi tenglamasini

$$\frac{dy}{dx} = \pm y^2 + R(x)$$

ko'rinishda yozish mumkin.

559. Ushbu $\frac{dy}{dx} = y^2 + \frac{1}{2x^2}$ Rikkati tenglamasini yeching.

Yechish. $y = \frac{1}{z}$ almashtirish orqali tenglamani $\frac{dz}{dx} = -1 - \frac{1}{2} \left(\frac{z}{x} \right)^2$ ko'rinishga keltiramiz. Bu bir jinsli tenglamani yechishda $\frac{z}{x} = u$ belgilashdan foydalanamiz.

U holda

$$u + x \frac{du}{dx} = -1 - \frac{1}{2} u^2, \Rightarrow \frac{du}{u^2 + 2u + 2} = -\frac{dx}{2x}, \Rightarrow \frac{du}{1 + (u+1)^2} = -\frac{dx}{2x}$$

tenglikni integrallab, yechimni topamiz.

$$\arctg(1+u) = -\frac{1}{2} \ln x + C, \Rightarrow u + 1 = \tg\left(C - \frac{1}{2} \ln x\right), \Rightarrow \\ z = x \left[-1 + \tg\left(C - \frac{1}{2} \ln x\right) \right], \Rightarrow y = \frac{1}{x \left[-1 + \tg\left(C - \frac{1}{2} \ln x\right) \right]}.$$

Quyidagi Rikketi tenglamalarni yeching

560. $5xy' - (4x+5)y + y^2 = -3x.$

561. $y' + y^2 = \frac{2}{x^3}$

562. $xy' + xy + x^2 y^2 = 4$

563. $3y' + y^2 + \frac{2}{x^2} = 0.$

564. $xy' - (2x+1)y + y^2 = -x^2.$

565. $y' - 2xy + y^2 = 5 - x^2.$

566. $y' + 2ye^x - y^2 = e^{2x} + e^x.$

567. $3xy' - (2x+3)y + y^2 = -x^2.$

568*. $2xy' - (3x+2)y + y^2 = -2x^2.$

569*. $y' + ay^2 - axy - 1 = 0.$

35-§. Yuqori tartibli differensial tenglamalar.

Tartibi pasayadigan differensial tenglamalar

1. **Asosiy tushunchalar.** n - tartibli oddiy differensial tenglama deb

$$F(x, y, y', y'', \dots, y^{(n)}) = 0 \quad (38)$$

ko'rinishdagi tenglamaga aytildi.

Bu tenglamaning yechimi deb, n marta differensiallanuvchi va (38) tenglamaga qo'yish natijasida uni ayniyatga aylantiruvchi $y = \varphi(x)$ funksiyaga aytildi, ya'ni

$$F[x, \varphi(x), \varphi'(x), \varphi''(x), \dots, \varphi^{(n)}(x)] = 0.$$

Koshi masalasi. (38) tenglamaning

$$y(x_0) = y_0, \quad y'(x_0) = y'_0, \quad y''(x_0) = y''_0, \dots, \quad y^{(n)}(x_0) = y^{(n)}_0 \quad (39)$$

boshlang'ich shartlarni qanoatlantiruvchi yechimi topilsin.

$$y = \varphi(x, C_1, C_2, \dots, C_n)$$

funksiya (38) tenglamaning umumiy yechimi bo'lsin, C_1, C_2, \dots, C_n , o'zgarmas sonlar (39) Koshi shartlari orqali aniqlanib, xususiy yechim topiladi.

Umumiy yechimdan xususiy yechimni hosil qilishda qaralayotgan oraliqning chetki nuqtalarida berilgan chegaraviy shartlardan ham foydalilaniladi.

Koshi shartlari deb ataluvchi boshlang'ich shartlar soni tenglamaning tartibi bilan teng bo'lishini ta'kidlab o'tamiz.

n -tartibli differensial tenglamani saqat ayrim xususiy hollar-dagina bevosita integrallash mumkin. Quyida tartibi pasayadigan tenglamalarni ko'rib o'tyamiz.

2. Tartibi pasayadigan tenglamalar

$y^{(n)} = f(x)$ ko'rinishdagi differensial tenglamalar.

Bunday ko'rinishdagi tenglamani n marta ketma-ket integral-lash natijasida umumiy yechimi topiladi:

$$y^{(n)} = f(x), \quad (40)$$

$$y^{(n-1)} = \int f(x) dx + C_1 = f_1(x) + C_1,$$

$$y^{(n-2)} = \int [f_1(x) + C_1] dx + C_2 = f_2(x) + C_1 x + C_2,$$

.....

$$y = f_n(x) + \frac{C_1}{(n-1)!} x^{n-1} + \frac{C_2}{(n-2)!} x^{n-2} + \dots + C_{n-1} x + C_n, \quad (41)$$

bu yerda

$$f_n(x) = \int \int \dots \int f(x) dx^n,$$

$\frac{C_1}{(n-1)!}, \frac{C_2}{(n-2)!}, \dots, C_n$ lar o'zgarmas sonlar bo'lgani uchun (41) ni quyidagicha yozish mumkin:

$$y = f_n(x) + C_1 x^{n-1} + C_2 x^{n-2} + \dots + C_{n-1} x + C_n.$$

570. Ushbu $y'' = \sin x$ tenglamaning umumiy yechimini toping.

Yechish. $y'' = \frac{dy'}{dx}$ ekanini e'tiborga olib, berilgan tenglamani

$\frac{dy'}{dx} = \sin x$ yoki $dy' = \sin x dx$ ko'rinishda yozish mumkin. Tenglamani har ikkala tomonini ketma-ket integrallab, umumiy yechimni topamiz:

$$y'' = \int \sin x dx + C_1 = -\cos x + C_1,$$

$$y' = \int (-\cos x + C_1) dx + C_2 = -\sin x + C_1 x + C_2,$$

$$y = \int (-\sin x + C_1 x + C_2) dx + C_3 = \cos x + \frac{1}{2} C_1 x^2 + C_2 x + C_3.$$

Demak, izlangan yechim

$$y = \cos x + C x^2 + C_2 x + C_3, \quad C = \frac{1}{2} C_1.$$

571. $y'' = xe^{-x}$ tenglamaning $y(0) = 1, y'(0) = 0$ boshlang'ich shartlarni qanoatlantiruvchi yechimini toping.

Yechish. Berilgan tenglamani ketma-ket integrallash natijasida umumiy yechimni aniqlaymiz:

$$y' = \int xe^{-x} dx + C_1 = -xe^{-x} + e^{-x} + C_1,$$

$$y = \int (-xe^{-x} + e^{-x} + C_1) dx + C_2 = xe^{-x} + e^{-x} + C_1 x + C_2,$$

yoki

$$y = e^{-x}(x+2) + C_1 x + C_2.$$

Boshlang'ich shartlardan foydalanib, koeffitsiyentlarni topamiz

$$1 = e^{-0}(0+2) + C_1 \cdot 0 + C_2, \quad C_2 = -1,$$

$$y'(0) = -0 \cdot e^{-0} - e^{-0} + C_1, \quad 0 = -1 + C_1, \quad C_1 = 1.$$

Demak, xususiy yechim

$$y = e^{-x}(x+2) + x - 1.$$

Quyidagi differensial tenglamalarni yeching

572. $y''' = \cos^2 x, \quad y(0) = \frac{1}{32}, \quad y'(0) = 0, \quad y''(0) = \frac{1}{8}, \quad y'''(0) = 0.$

573. $y''' = x \sin x, \quad y(0) = 0, \quad y'(0) = 0, \quad y''(0) = 2.$

574. $y'' \sin^4 x = \sin 2x.$

575. $y'' = 2 \sin x \cos^2 x - \sin^3 x.$

576. $y''' = xe^{-x}, \quad y(0) = 0, \quad y'(0) = -2, \quad y''(0) = 2.$

577. $y''' = \frac{6}{x^3}$, $y(1) = 2$, $y'(1) = 1$, $y''(1) = 1$.

578. $y'' = \frac{1}{\cos^2 x}$, $y\left(\frac{\pi}{4}\right) = \ln \sqrt{2}$, $y'\left(\frac{\pi}{4}\right) = 1$.

579*. $y'' = 4\cos 2x$, $y(0) = 0$, $y'(0) = 0$.

580*. $y'' = \frac{1}{1+x^2}$.

581. $y''' = x^{-2}$.

582. $y''' = \cos x$.

583. $y'' = \frac{1}{\sin^2 x}$.

584. $y'' = xe^x$, $y(0) = 1$, $y'(0) = 2$.

585. $y'' = \sin 2x$, $y(0) = 6$, $y'(0) = 0$.

36-§. Noma'lum funksiya oshkor holda qatnashmagan tenglamalar

$F(x, y', y'') = 0$ ko'rinishdagi differensial tenglama

$y' = p$, $y'' = \frac{dp}{dx}$ almashtirish orqali $F\left(x, p, \frac{dp}{dx}\right) = 0$ birinchi tartibli differensial tenglamaga keltiriladi.

586. $y'' = \frac{y'}{x} + x$ tenglamaning umumi yechimini toping.

Yechish. $y' = p$ almashtirish bajarib

$$\frac{dp}{dx} = \frac{p}{x} + x$$

birinchi tartibli chiziqli tenglamaga kelamiz. (12) formuladan foydalaniib umumi yechimni topamiz.

$$p = e^{\int \frac{1}{x} dx} \left[C_1 + \int x e^{-\int \frac{1}{x} dx} dx \right] = e^{\ln x} \left[C_1 + \int x e^{-\ln x} dx \right] = x(C_1 + \int x e^{-\ln x} dx) =$$

$$= x(C_1 + \int x \cdot \frac{1}{x} dx) = x(C_1 + x). \Rightarrow p = y' = C_1 x + x^2 \Rightarrow y = \frac{x^2}{2} C_1 + \frac{x^3}{3} + C_2.$$

587. $y''(x-1) - y'' = 0$, $y(2) = 2$, $y'(2) = 1$. tenglamaning xususiy yechimini toping.

Yechish. $y'' = p(x)$ va $y''' = p'$ almashtirish orqali quyidagi o'zgaruvchilari ajraladigan tenglama hosil bo'ladi. Bu tenglamaning yechimi:

$$p'(x-1) = p, \Rightarrow \frac{dp}{p} = \frac{dx}{(x-1)}, \Rightarrow \ln|p| = \ln|x-1| + \ln C_1, \Rightarrow p = C_1(x-1).$$

Demak,

$$y'' = C_1(x-1).$$

Bu tenglamani ketma-ket integrallab umumiy yechimni topamiz.

$$y' = \int C_1(x-1) dx = \frac{1}{2} C_1 x^2 - C_1 x + C_2,$$

$$y = \int \left(\frac{1}{2} C_1 x^2 - C_1 x + C_2 \right) dx + C_3 = \frac{C_1}{6} x^3 - \frac{C_1}{2} x^2 + C_2 x + C_3.$$

Xususiy yechimni topish uchun chetki shartlardan foydalananamiz.

$$y''(2) = 1, \Rightarrow 1 = C_1(2-1), \Rightarrow C_1 = 1,$$

$$y'(2) = 1, \Rightarrow 1 = \frac{1}{2} \cdot 4 - 2 + C_2, \Rightarrow C_2 = 1,$$

$$y(2) = 2, \Rightarrow 2 = \frac{8}{6} - \frac{4}{2} + 2 + C_3, \Rightarrow C_3 = \frac{2}{3}.$$

Demak, xususiy yechim

$$y = \frac{1}{6} x^3 - \frac{1}{2} x^2 + x + \frac{2}{3}.$$

588. m massali jism samolyotdan boshlang'ich tezliksiz tashlandi. Unga o'z tezligining kvadratiga teng miqdorda havo qarshilik ko'rsatmoqda. Jismning harakat qonunini toping.

Yechish. Quyidagi belgilashlar kiritamiz: s-jism bosib o'tgan masofa; $v = \frac{ds}{dt}$ -jismning tezligi; $w = \frac{d^2 s}{dt^2}$ -tezlanish. $p = mg$ - harakat yo'nalishidagi og'irlik kuchi; $F = mv^2 = k \left(\frac{ds}{dt} \right)^2$ -qarama-qarshi yo'nalishdagi havo qarshiligi.

Nyutonning ikkinchi qonuniga asosan jismning harakat qonunini ifodalovchi quyidagi differensial tenglamani yozamiz:

$$mw = p - kv^2 \Rightarrow m \frac{d^2 s}{dt^2} = mg - k \left(\frac{ds}{dt} \right)^2, \frac{ds}{dt} = v.$$

$$m \frac{dv}{dt} = mg - kv^2 \Rightarrow \frac{dv}{dt} = \frac{k}{m} \left(\frac{gm}{k} - v^2 \right).$$

tenglama hosil bo'ladi.

$a^2 = \frac{mg}{k}$ belgilash kirtsak, o'zgaruvchilari ajraladigan differensial tenglama hosil bo'ladi. O'zgaruvchilarni ajratib va integralab, quyidagini hosil qilamiz:

$$\frac{dv}{dt} = \frac{k}{m}(a^2 - v^2) \Rightarrow \frac{dv}{a^2 - v^2} = \frac{k}{m} dt \Rightarrow \frac{1}{2a} \ln \left| \frac{a+v}{a-v} \right| = \frac{k}{m} t + C_1.$$

Masalaning shartiga ko'ra $v|_{t=0} = 0$ ekanini e'tiborga olsak, $C_1 = 0$ kelib chiqadi. Shunday qilib,

$$\ln \left| \frac{a+v}{a-v} \right| = \frac{2ak}{m} t \Rightarrow v = a \left(\frac{e^{\frac{2ak}{m}t} - 1}{e^{\frac{2ak}{m}t} + 1} \right) = a \frac{e^{\frac{akt}{m}} - e^{-\frac{akt}{m}}}{e^{\frac{akt}{m}} + e^{-\frac{akt}{m}}} = ath \frac{akt}{m},$$

hosil bo'ladi. $\frac{ak}{m} = \sqrt{\frac{mg}{k}} \cdot \frac{k}{m} = \sqrt{\frac{kg}{m}}$ va $v = \frac{ds}{dt}$ ekanini e'tiborga olsak, $\frac{ds}{dt} = ath \sqrt{\frac{kg}{m}} t$ tenglamani hosil qilamiz va uning yechimi

$$s = \sqrt{\frac{m}{kg}} a \ln ch \sqrt{\frac{kg}{m}} t + C_2 = \frac{m}{k} \ln ch \sqrt{\frac{kg}{m}} t + C_2, \quad v|_{t=0} = 0 \Rightarrow C_2 = 0.$$

Demak, jism bosib o'tgan yo'1 $s = \frac{m}{k} \ln ch \sqrt{\frac{kg}{m}} t$ formula bilan, tezligi esa $v = ath \sqrt{\frac{kg}{m}} t$ formula bilan topiladi. Bu formulada $a = \sqrt{\frac{mg}{k}}$. ekanligidan tushish tezligi cheksiz o'sa olmaydi hamda tezda $v = \sqrt{\frac{p}{k}}$ limitik qiymatga erishadi.

Quyidagi differensial tenglamalarni yeching

589. $x^3 y'' + x^2 y' = 1.$

590. $y'' + y' \operatorname{tg} x = \sin 2x.$

591. $y'' x \ln x = y'.$

592. $x y'' - y' = e^x \cdot x^2.$

593. $y'' + 2xy'^2 = 0.$

594. $(1-x^2)y'' - xy' = 2.$

595. $2xy''y'' = y''^2 - \sigma^2.$

596. $(1+x^2)y'' + 1 + y'^2 = 0.$

597. $x^2 y'' = y'^2.$

598. $y''(e^x + 1) + y' = 0.$

599. $(1+x^2)y'' + 2xy' = x^3.$

600. $y'' \operatorname{tg} x = y' + 1.$

601*. $xy'' = y' + x \sin \frac{y'}{x}.$

602*. $(1-x^2)y'' + xy' = 2.$

37-§. Argument oshkor holda qatnashmagan tenglamalar

$$F(y, y', y'', \dots, y^{(n)}) = 0 \quad (42)$$

tenglamada erkli o'zgaruvchi x oshkor holda ishtirok etmaydi. Bu tenglamani

$$y' = p(y) \quad (43)$$

almashtirish yordamida tartibi bittaga pasaytirib yechiladi. (43) almashtirish natijasida:

$$y'' = p'(y)y' = pp', \quad y''' = p[pp'' + p'^2], \dots$$

o'rniga qo'yish bajariladi.

603. $1 + y'^2 = y \cdot y''$ tenglamaning umumiy yechimini toping.

Yechish. $y' = p(y)$ va $y'' = pp'$ almashtirishni bajaramiz. U holda

$$1 + p^2 = y \cdot p + p', \Rightarrow \frac{pdp}{1 + p^2} = \frac{dy}{y}, \Rightarrow \frac{1}{2} \ln|1 + p^2| = \ln|y| + \ln C_1,$$

$$\Rightarrow 1 + p^2 = C_1^2 y^2, \Rightarrow p = \pm \sqrt{C_1^2 y^2 - 1},$$

hosil bo'ladi. p ning qiymatini o'miga qo'yib, umumiy yechimni topamiz:

$$y' = \pm \sqrt{C_1^2 y^2 - 1}, \Rightarrow \frac{dy}{\sqrt{C_1^2 y^2 - 1}} = \pm dx, \Rightarrow \frac{1}{C_1} \ln(C_1 y + \sqrt{C_1^2 y^2 - 1}) = \pm(x + C_2),$$

$$y = \frac{1}{2C_1} \left(e^{\pm(x+C_2)C_1} + e^{\mp(x+C_2)C_1} \right) = \frac{1}{C_1} ch C_1(x + C_2).$$

604. $M(0;1)$ nuqtadagi urinmasi Ox o'q bilan $\alpha = 45^\circ$ burchak tashkil qiluvchi va egrilik radiusi normalning kubiga teng bo'lgan chiziq tenglamasini tuzing.

Yechish. Egri chziqning egrilik radiusi va normal tenglamasi quyidagicha edi:

$$R = \frac{(1 + y'^2)^{3/2}}{y''}, \quad N = y \sqrt{1 + y'^2}.$$

Masala shartiga asosan $R = N^3$ ekanligidan quyidagi different-sial tenglamaga ega bo'lamiz;

$$\frac{(1 + y'^2)^{3/2}}{y''} = y^3 (1 + y'^2)^{3/2} \Rightarrow y'' y^3 = 1, \quad |y' = p(y), \quad y'' = pp'| \Rightarrow$$

$$pp'y^3 = 1, \Rightarrow pdp = y^{-3}dy, \Rightarrow \int pdp = \int y^{-3}dy, \Rightarrow$$

$$\frac{1}{2}p^2 = -\frac{1}{2}y^{-2} + \frac{1}{2}C_1, \Rightarrow p^2 = C_1 - y^{-2}.$$

Bundan,

$$y'^2 = C_1 - y^{-2}$$

tenglama hosil bo‘ladi. Masala shartiga asosan

$$y'(0) = \operatorname{tg} 45^\circ = 1, \quad y(0) = 1,$$

tenglamaga qo‘yib $1 = C_1 - 1 \Rightarrow C_1 = 2$.

Shunday qilib, quyidagi tenglamaga kelamiz:

$$y'^2 = 2 - y^{-2} \Rightarrow y' = \frac{\sqrt{2y^2 - 1}}{y} \Rightarrow \frac{ydy}{\sqrt{2y^2 - 1}} = dx \Rightarrow \frac{1}{2}\sqrt{2y^2 - 1} = x + \frac{1}{2}C_2,$$

yoki

$$y = \frac{1}{2}[(2x + C_2)^2 + 1], \quad M(0; 1) \Rightarrow 1 = \frac{1}{2}[(2 \cdot 0 + C_2)^2 + 1], \quad C_2 = 1.$$

Demak, umumiy yechim $y = 2x^2 + 2x + 1$.

Quyidagi differensial tenglamalarni yeching

$$605. yy'' + y'^2 = 0.$$

$$606. y'' + 2y(y')^3 = 0.$$

$$607. y'' \operatorname{tg} y = 2y'^2.$$

$$608. y''(2y+3) - 2y'^2 = 0.$$

$$609. y(1 - \ln y)y'' + (1 + \ln y)y'^2 = 0.$$

$$610. y''(1+y) = y'^2 + y'.$$

$$611. yy'' + y = y'^2.$$

$$612. y'^2 + 2yy'' = 0.$$

$$613. y''y^3 = 1.$$

$$614. 2yy'' = 1 + y'^2.$$

$$615. yy'' = y'^2 + y \cdot \ln y.$$

$$616. y'' = \frac{y'}{\sqrt{y}}.$$

$$617. 2yy'' = (y')^2.$$

$$618*. yy'' - y'^2 = 0, \quad y(0) = 1, \quad y'(0) = 2.$$

38-§. Noma'lum funksiya va hosilaga nisbatan bir jinsli tenglamalar

$$F(x, y, y', y'', \dots, y^{(n)}) = 0 \tag{44}$$

tenglama $x, y, y', y'', \dots, y^{(n)}$ larga nisbatan bir jinsli bo‘lsa,

$$\frac{y'}{y} = \rho(x) \tag{45}$$

almashtirish yordamida (44) ni tartibini bittaga pasaytirib yechiladi.

619. $3y'^2 = 4y \cdot y'' + y^2$ tenglamani yeching.

Yechish. Berilgan tenglama y, y', y'' larga nisbatan bir jinsli ekanligidan, tenglamaning har ikki tomonini y^2 ga bo'lib,

$$3\left(\frac{y'}{y}\right)^2 - 4\frac{y''}{y} = 1$$

ko'rinishga kelamiz. Bu tenglamada:

$$\frac{y'}{y} = p(x), \Rightarrow p'(x) = \frac{y''y - y'^2}{y^3} = \frac{y''}{y} - \left(\frac{y'}{y}\right)^2, \Rightarrow \frac{y''}{y} = p' - p^2.$$

Bularni e'tiborga olib, quyidagi tenglamani hosil qilamiz. Uning yechimi:

$$3p^2 - 4p^2 - 4p' = -1 - p^2 \Rightarrow 4p' = -1 - p^2 \Rightarrow \frac{dp}{1 + p^2} = -\frac{1}{4}dx \Rightarrow$$

$$drtgp = -\frac{1}{4}x + c_1 \Rightarrow p = tg(c_1 - \frac{x}{4}) \Rightarrow \frac{y'}{y} = tg(c_1 - \frac{x}{4}) \frac{dy}{y} = stg(c_1 - \frac{x}{4})dx + \ln c_2$$

$$\ln|y| = 4\ln\left|\cos\left(C_1 - \frac{x}{4}\right)\right| + \ln|C_2| \Rightarrow y = C_2 \cos^4\left(C_1 - \frac{x}{4}\right).$$

620. $y'^2 + y \cdot y'' = y \cdot y'$ tenglamani yeching.

Yechish. Berilgan tenglama y, y', y'' larga nisbatan bir jinsli $y'^2 + yy'' = (yy')'$ ekanligidan $yy' = z \Rightarrow z' = z \Rightarrow z = C_1 e^x$. Bundan

$$yy' = C_1 e^x \Rightarrow ydy = C_1 dx \Rightarrow y^2 = 2C_1 e^x + C_2 \Rightarrow y = \sqrt{2C_1 e^x + C_2}.$$

Quyidagi differensial tenglamalarni yeching

621. $yy'' - y'^2 = 0.$

622. $(y+1)y'' + (y')^2 = 0.$

623. $2xy'' \cdot y' = y'^2 - a^2.$

624. $y'' = y'e^y, y(0) = 0, y'(0) = 1.$

625. $xyy'' + xy'^2 = yy'.$

626. $yy'' = y'^2 + 15y^2 \sqrt{x}.$

627. $(1+x^2)(y'^2 - yy'') = xyy'.$

628. $xyy'' + xy'^2 = 2yy'.$

629. $x^2yy'' = (y - xy')^2.$

630. $y'' + \frac{y'}{x} + \frac{y}{x^2} = \frac{y'^3}{y}.$

631. $x^2yy'' + y'^2 = 0.$

632. $x^2(y'^2 - 2yy'') = y^2.$

633. $xyy'' = y(y+y').$

634. $4x^2y^3y'' = x^2 - y^4.$

635* $x^3y'' = (y - xy')(y - xy' - x).$

39-§. Yuqori tartibli chiziqli tenglamalar

$$y^{(n)} + a_1(x)y^{(n-1)} + a_2(x)y^{(n-2)} + \dots + a_{n-1}(x)y' + a_n(x)y = f(x) \quad (46)$$

ko‘rinishdagи tenglama n -tartibli chiziqli bir jinsli bo‘lmagan tenglama deyiladi.

Bu yerda $a_1(x), a_2(x), \dots, a_n(x)$ va $f(x)$ - ma’lum va biror oraliqda uzuksiz bo‘lgan funksiyalar.

Agar $f(x)=0$ bo‘lsa, bu tenglama chiziqli bir jinsli tenglama deyiladi.

Chiziqli bir jinsli tenglamaning birorta y_i xususiy yechimini bilgan holda

$$y = y_i \int z(x) dx \quad (47)$$

chiziqli almashtirish yordamida berilgan tenglamaning tartibini bittaga pasaytirish mumkin. U holda mos bir jinsli bo‘lmagan tenglama ham $z(x)$ ga nisbatan $(n-1)$ -tartibli chiziqli tenglamaga keladi.

636. $y'' + \frac{2}{x}y'' - y' + \frac{1}{x \ln x} = x$ tenglamani $y_i = \ln x$ xususiy yechimi bo‘lsa, tartibini pasaytiring.

Yechish. (47) formulaga asosan $y = \ln x \int z(x) dx$ almashtirish bajaramiz. y dan 3-tartibli hosila olamiz.

$$y' = \frac{1}{x} \int z(x) dx + z \ln x,$$

$$y'' = -\frac{1}{x^2} \int z(x) dx + \frac{2z}{x} + z' \ln x,$$

$$y''' = \frac{2}{x^3} \int z(x) dx - \frac{3z}{x^2} + \frac{3z'}{x} + z'' \ln x.$$

Hosilalarning qiymatini berilgan tenglamaga qo‘yib $z(x)$ ga nisbatan quyidagi ikkinchi tartibli tenglamaga ega bo‘lamiz:

$$z'' \ln x + \left(\frac{3}{x} + \frac{2 \ln x}{x} \right) z' + \left(\frac{1}{x^2} - \ln x \right) z = x.$$

$$637. \quad y'' + \frac{2}{x}y' + y = 0 \quad \text{tenglamani} \quad y_1 = \frac{\sin x}{x} \quad \text{xususiy yechimi}$$

bo'lsa, umumiy yechimni toping.

Yechish. (47) formulaga asosan $y = \frac{\sin x}{x} \int z(x)dx$ almashtirish bajaramiz. y dan 2-tartibli hosila olamiz.

$$y' = \frac{x \cos x - \sin x}{x^2} \int z(x)dx + \frac{\sin x}{x} z,$$

$$y'' = \frac{\sin x}{x} z' + \frac{2(x \cos x - \sin x)}{x^2} z - \frac{(x^2 - 2)\sin x + 2x \cos x}{x^3} \int zdz,$$

hosilalarning qiymatini berilgan tenglamaga qo'yib, quyidagi 1-tartibli tenglama hosil bo'ladi. Uning o'zgaruvchilarni ajratish usulida yechamiz.

$$\sin x \cdot z' + 2\cos x \cdot z = 0 \Rightarrow \frac{dz}{z} = -2 \frac{\cos x}{\sin x} dx \Rightarrow z = \frac{C_1}{\sin^2 x}.$$

Natijani dastlabki almashtirishga qo'yib, umumiy yechimni topamiz:

$$y = \frac{\sin x}{x} \int \frac{C_1}{\sin^2 x} dx = \frac{\sin x}{x} (C_2 - C_1 ctgx), \Rightarrow y = C_2 \frac{\sin x}{x} - C_1 \frac{\cos x}{x}.$$

638. $y'' \sin^2 x = 2y$ tenglamaning $y = ctgx$ xususiy yechimi bo'lsa, uning tartibini pasaytiring.

639. $y'' - \frac{y'}{x} + \frac{y}{x^2} = 0$ tenglamaning $y = x$ xususiy yechimi bo'lsa, uning tartibini pasaytirib integrallang.

640. $y'' + (tgx - 2ctgx)y' + 2ctg^2 x \cdot y = 0$ tenglamaning $y = \sin x$ xususiy yechimi bo'lsa, uning tartibini pasaytirib integrallang.

641. $y'' + \frac{2}{x}y' + y = 0$ tenglamaning $y = \frac{\cos x}{x}$ xususiy yechimi bo'lsa, uning tartibini pasaytirib integrallang.

642. $y'' - \frac{2}{\cos^2 x}y = 0$ tenglamaning $y = tgx$ xususiy yechimi bo'lsa, uning tartibini pasaytirib integrallang.

643. $y'' - 2y' - 3y = 0$ tenglamaning $y = e^{-x}$ xususiy yechimi bo'lsa, uning tartibini pasaytirib integrallang.

644. $y'' + 4y = 0$ tenglamaning $y = \sin 2x$ xususiy yechimi bo'lsa, uning tartibini pasaytirib integrallang.

40-§. Yuqori tartibli chiziqli bir jinsli tenglamalar

$$y^{(n)} + a_1(x)y^{(n-1)} + a_2(x)y^{(n-2)} + \dots + a_{n-1}(x)y' + a_n(x)y = 0 \quad (48)$$

ko'rinishdagi tenglama berilgan. y_1, y_2, \dots, y_n funksiyalar (48) tenglamaning chiziqli erkli xususiy yechimlari bo'lsa, quyidagi teorema o'rini.

Teorema. Agar (48) tenglamaning xususiy chiziqli erkli yechimlari y_1, y_2, \dots, y_n funksiyalar bo'lsa

$$y = C_1 y_1 + C_2 y_2 + \dots + C_n y_n \quad (49)$$

funksiya (48) tenglamaning umumiy yechimi bo'ladi, C_1, C_2, \dots, C_n lar ixtiyoriy o'zgarmas sonlar.

Izoh. y_1, y_2, \dots, y_n funksiyalar ($a; b$) oraliqda noldan farqli $\alpha_1, \alpha_2, \dots, \alpha_n$ sonlar uchun

$$\alpha_1 y_1 + \alpha_2 y_2 + \dots + \alpha_n y_n \neq 0 \quad (50)$$

bo'lsa bu funksiyalar chiziqli erkli funksiyalar, aks holda chiziqli bog'liq funksiyalar deyiladi.

(50) tenglikni ikkita y_1, y_2 funksiyalar uchun qo'llasak, quyidagi sodda natijani hosil qilamiz, ya'ni chiziqli erkli bo'ishi uchun:

$$\alpha_1 y_1 + \alpha_2 y_2 \neq 0 \Rightarrow \frac{y_1}{y_2} \neq -\frac{\alpha_1}{\alpha_2} \Rightarrow \frac{y_1}{y_2} \neq C.$$

Masalan. 1. $y_1 = x, y_2 = x^2$ funksiyalar $\frac{y_1}{y_2} = \frac{x}{x^2} = \frac{1}{x} \neq C$ bo'lgani uchun chiziqli erkli.

2. $y_1 = e^x, y_2 = e^{-x}$ funksiyalar $\frac{y_1}{y_2} = \frac{e^x}{e^{-x}} = e^{2x} \neq C$ bo'lgani uchun chiziqli erkli.

3. $y_1 = 2e^{3x}, y_2 = 5e^{3x}$ funksiyalar $\frac{y_1}{y_2} = \frac{2e^{3x}}{5e^{3x}} = \frac{2}{5} = C$ bo'lgani uchun chiziqli bog'liq.

n ta funksiyaning chiziqli erkli bo'lislining yetarli sharti sifatida $W(y_1, y_2, \dots, y_n) = Vronskiy determinantining noldan farqli bo'lishi xizmat qiladi, ya'ni$

$$W(y_1, y_2, \dots, y_n) = \begin{vmatrix} y_1 & y_2 & \dots & y_n \\ y'_1 & y'_2 & \dots & y'_n \\ \dots & \dots & \dots & \dots \\ y_1^{(n-1)} & y_2^{(n-1)} & \dots & y_n^{(n-1)} \end{vmatrix} \neq 0. \quad (51)$$

Agar y_1, y_2, \dots, y_n funksiyalar (48) tenglamaning xususiy yechimlari bo'lsa, Vronskiy determinantining noldan farqli bo'lishi bu funksiyalarning chiziqli erkli bo'lishi uchun zarur va yetarli.

(48) tenglamaning Vronskiy determinanti (51) $a_1(x)$ koefitsiyenti bilan ($a_1 b$) oraliqning x_0 nuqtasida

$$W(y_1, y_2, \dots, y_n) = W(y_1, y_2, \dots, y_n) \Big|_{x=x_0} \cdot e^{-\int_{x_0}^x a_1(t) dt} \quad (52)$$

Liuvilli-Ostrogradskiy formulasi bilan ifodalanadi.

(48) tenglamani chiziqli erkli yechimlari to'plami yechimlarning fundamental sistemasi deyiladi.

Ikkinchchi tartibli

$$y'' + a_1(x)y' + a_2(x)y = 0 \quad (53)$$

chiziqli bir jinsli tenglamaning fundamental sistemasi $y_1(x)$ va $y_2(x)$ funksiyalardan iborat bo'lsa, uning umumiy yechimi

$$y = C_1 y_1(x) + C_2 y_2(x) \quad (54)$$

ko'rinishda bo'ladi.

Agar (53) tenglamaning bitta xususiy yechimi $y_1(x)$ ma'lum bo'lsa, ikkinchi chiziqli erkli yechim Liuvilli-Ostrogradskiy formulasi, ya'ni

$$y_2(x) = y_1(x) \int \frac{e^{-\int a_1(x) dx}}{y_1^2(x)} dx \quad (55)$$

yordamida aniqlanadi. Bu usul ikkinchi tartibli bir jinsli tenglamaning bitta yechimi ma'lum bo'lganda, uning tartibini pasaytirmsandan birdaniga (55) formula yordamida $y_2(x)$ ni topib, (54) formula orqali umumiy yechimni yozish imkonini beradi.

$$645. \quad y'' + \frac{2}{x} y' + y = 0 \quad \text{tenglamani} \quad y_1 = \frac{\sin x}{x} \quad \text{xususiy yechimni}$$

bilgan holda uning umumiy yechimni toping.

Yechish. (55) formulaga asosan $y_2(x)$ ni topamiz

$$y_2(x) = \frac{\sin x}{x} \int \frac{e^{-\int \frac{2}{x} dx}}{\left(\frac{\sin x}{x}\right)^2} dx = \frac{\sin x}{x} \int \frac{e^{-2\ln x}}{\left(\frac{\sin x}{x}\right)^2} dx = \frac{\sin x}{x} \int \frac{x^2 \cdot x^{-2}}{\sin^2 x} dx =$$

$$= \frac{\sin x}{x} \int \frac{dx}{\sin^2 x} = \frac{\sin x}{x} (-\operatorname{ctgx}) = -\frac{\cos x}{x}.$$

Tenglamaning umumiy yechimi (54) formulara asosan quyidagicha bo‘ladi:

$$y = C_1 \frac{\sin x}{x} - C_2 \frac{\cos x}{x}.$$

646. $y = C_1 e^{3x} + C_2 e^{-3x}$ funksiya $y'' - 9y = 0$ tenglamaning umumiy yechimi ekanini ko‘rsating.

Yechish. $y_1(x) = e^{3x}$, $y_2(x) = e^{-3x}$ har biri ham tenglamani qanoatlantiradi hamda $\frac{y_1(x)}{y_2(x)} = \frac{e^{3x}}{e^{-3x}} = e^{6x} \neq C$. Demak, ular chiziqli erkli funksiyalar shuning ucun:

$$y = C_1 e^{3x} + C_2 e^{-3x}.$$

647. $y'' - y' = 0$ tenglamaning $y_1 = e^x$, $y_2 = e^{-x}$, $y_3 = chx$ xususiy yechimlari fundamental sistema tashkil etadimi?

Yechish. Buning uchun Vronskiy determinantini hisoblaymiz:

$$W(x) = \begin{vmatrix} y_1 & y_2 & y_3 \\ y_1' & y_2' & y_3' \\ y_1'' & y_2'' & y_3'' \end{vmatrix} = \begin{vmatrix} e^x & e^{-x} & chx \\ e^x & -e^{-x} & shx \\ e^x & e^{-x} & chx \end{vmatrix} = 0,$$

chunki birinchi va uchinchi satrlar bir xil. Shuning uchun bu funksiyalar chiziqli bog‘liq, ular fundamental sistema tashkil etmaydi. Demak, ularidan umumiy yechim tuzib bo‘lmaydi.

$y_1(x)$ va $y_2(x)$ funksiyalar berilgan tenglamaning fundamental yechimlar sistemasini tashkil etishini ko‘rsating va tenglamaning umumiy yechimini yozing.

$$648. y_1 = x, \quad y_2 = x^2 - 1, \quad y'' - \frac{2x}{x^2 + 1} y' + \frac{2}{x^2 + 1} y = 0.$$

$$649. y_1 = x^3, \quad y_2 = x^4, \quad y'' - \frac{6}{x} y' + \frac{12}{x^2} y = 0.$$

$$650. y_1 = e^{2x}, \quad y_2 = x e^{2x}, \quad y'' - 4y' + 4y = 0.$$

$$651. y_1 = \sin x, \quad y_2 = \cos x, \quad y'' + y = 0.$$

652. $y_1 = \sin x, y_2 = \cos x, y'' - y = 0.$

653. $y_1 = \frac{\sin x}{\sqrt{x}}, y_2 = \frac{\cos x}{\sqrt{x}}, y'' - \frac{1}{x}y' + \left(1 - \frac{1}{4x^2}\right)y = 0.$

Quyidagi berilgan funksiyalar chiziqli erkli bo'lishi yoki bo'lmasligini aniqlang

654. $x+1, 2x+1, x+2.$

655. $2x^2 + 1, x^2 - 1, x+2.$

656. $\sqrt{x}, \sqrt{x+a}, \sqrt{x+2a}.$

657. $\ln(2x), \ln(3x), \ln(4x).$

658. $\arcsin x, \arccos x.$

41-§. O'zgarmas koeffitsiyentli yuqori tartibli chiziqli bir jinsli differensial tenglamalar

$$y^{(n)} + a_1 y^{(n-1)} + a_2 y^{(n-2)} + \dots + a_{n-1} y' + a_n y = 0 \quad (56)$$

tenglama o'zgarmas koeffitsiyentli chiziqli bir jinsli tenglama deyiladi, bu yerdagi a_1, a_2, \dots, a_n lar o'zgarmas haqiqiy sonlar.

(56) tenglamaning yechimini

$$y = e^{kx}$$

ko'rinishda qidirib, uni tenglamaga qo'yish orqali, (56) ning xarakteristik tenglamasi deb ataluvchi quyidagi algebraik tenglamani hosil qilamiz:

$$k^n + a_1 k^{n-1} + a_2 k^{n-2} + \dots + a_{n-1} k + a_n = 0. \quad (57)$$

(56) tenglamaning yechimini (57) xarakteristik tenglamanining yechimiga mos ravishda:

1) har bir oddiy haqiqiy k yechimga $C e^{kx}$ qo'shiluvchi mos keladi, bu holda umumiy yechim quyidagicha bo'ladi:

$$y = C_1 e^{k_1 x} + C_2 e^{k_2 x} + \dots + C_n e^{k_n x}; \quad (58)$$

2) har bir, karrali yechimga, quyidagi ko'rinishdagi umumiy yechim mos keladi:

$$y = (C_1 + C_2 x + \dots + C_n x^{n-1}) e^{kx}; \quad (59)$$

3) har bir $k_{1,2} = \alpha \pm i\beta$ oddiy kompleks yechim bo'lganda, umumiy yechim quyidagicha bo'ladi:

$$y = e^{\alpha x} (C_1 \cos \beta x + C_2 \sin \beta x); \quad (60)$$

4) har bir $k_{1,2} = \alpha \pm i\beta$ m karrali kompleks yechim bo'lganda, umumi yechim quyidagicha bo'ladi:

$$y = e^{\alpha x} \left[(C_1 + C_2 x + \dots + C_n x^{n-1}) \cos \beta x + (C_1 + C_2 x + \dots + C_n x^{n-1}) \sin \beta x \right] \quad (61)$$

659. $y'' - 7y' + 6y = 0$ tenglamaning umumi yechimini toping.

Yechish. $k^2 - 7k + 6 = 0$ xarakteristik tenglamani tuzib, $k_1 = 1, k_2 = 6$ ildizlarga ega bo'lamiz, (58) formulaga asosan, umumi yechim quyidagi ko'rinishda bo'ladi:

$$y = C_1 e^x + C_2 e^{6x}.$$

660. $y''' - 13y'' + 36y = 0$ tenglamaning umumi yechimini toping.

Yechish. $k^4 - 13k^2 + 36 = 0$ xarakteristik tenglamani tuzib, $k_{1,2} = \pm 3, k_{3,4} = \pm 2$ ildizlarga ega bo'lamiz. (58) formulaga asosan, umumi yechim quyidagi ko'rinishda bo'ladi:

$$y = C_1 e^{-3x} + C_2 e^{3x} + C_3 e^{-2x} + C_4 e^{2x}.$$

661. $y'' - y' - 2y = 0$ tenglamaning $y(0) = 0, y'(0) = 3$ boshlang'ich shartlarni qanoatlantiruvchi xususiy yechimini toping.

Yechish. $k^2 - k - 2 = 0$ xarakteristik tenglamani yechib, $k_1 = -1, k_2 = 2$ ildizlarga ega bo'lamiz (58) formulaga asosan, umumi yechim quyidagi ko'rinishda bo'ladi:

$$y = C_1 e^{-x} + C_2 e^{2x}.$$

Boshlang'ich sartlardan foydalanib, quyidagi sistemaga kelamiz:

$$\begin{cases} C_1 + C_2 = 0, \\ -C_1 + 2C_2 = 3. \end{cases}$$

Sistemani yechib, $C_1 = -1, C_2 = 1$ ni topamiz. U holda xususiy yechim quyidagi ko'rinishda bo'ladi:

$$y = -e^{-x} + e^{2x}.$$

662. $y'' - 2y' = 0$ tenglamaning $y(0) = 0, y(\ln 2) = 3$ chegaraviy shartlarni qanoatlantiruvchi xususiy yechimini toping.

Yechish. $k^2 - 2k = 0$ xarakteristik tenglamani yechib, $k_1 = 0, k_2 = 2$ ildizlarga ega bo'lamiz (58) formulaga asosan, umumi yechim quyidagi ko'rinishda bo'ladi:

$$y = C_1 + C_2 e^{2x}.$$

Chegaraviy shartlardan foydalananib, quyidagi sistemaga kelamiz:

$$\begin{cases} C_1 + C_2 = 0, \\ C_1 + e^{2\ln 2}C_2 = 3, \end{cases} \Rightarrow \begin{cases} C_1 + C_2 = 0, \\ C_1 + 4C_2 = 3. \end{cases}$$

Sistemani yechib, $C_1 = -1$, $C_2 = 1$ ni topamiz. U holda xususiy yechim quyidagi ko'rnishda bo'ladi:

$$y = e^{2x} - 1.$$

663. $y'' - 2y' + y' = 0$ tenglamaning umumiy yechimini toping.

Yechish. $k^3 - 2k^2 + k = 0$ xarakteristik tenglamani yechib, $k_1 = 0$, $k_2 = k_3 = 1$ ildizlarga ega bo'lamiz (58) formulaga asosan, umumiy yechim quyidagi ko'rnishda bo'ladi:

$$y = C_1 + C_2 e^x + C_3 x e^x.$$

664. $y'' - 4y' + 13y = 0$ tenglamaning umumiy yechimini toping.

Yechish. $k^2 - 4k + 13 = 0$ xarakteristik tenglamani yechib, $k_{1,2} = 2 \pm 3i$ ildizlarga ega bo'lamiz (60) formulaga asosan, umumiy yechim quyidagi ko'rnishda bo'ladi:

$$y = e^{2x} (C_1 \cos 3x + C_2 \sin 3x).$$

Quyidagi tenglamalarning umumiy yechimini toping

665. $y'' - 4y' + 3y = 0.$

666. $y'' - 4y' + 4y = 0.$

667. $y'' - 4y' + 13y = 0.$

668. $y'' - 4y = 0.$

669. $y'' + 4y = 0.$

670. $y'' + 4y' = 0.$

671. $y'' - y' - 2y = 0.$

672. $y'' + 25y = 0.$

673. $y'' - y' = 0.$

674. $y'' + 4y' + 4y = 0.$

675. $y''' - 2y'' + y' = 0$

676. $y'' + 2y' + 5y = 0.$

677. $y''' + 5y'' + 4y = 0$

678. $y''' - 3y' + 2y = 0.$

679*. $y'' + 2ay' + a^2y = 0.$

680*. $y''' + a^4y = 0.$

Quyidagi tenglamalarning boshlang'ich yoki chegaraviy shartlarni qanoatlantiruvchi yechimini toping

681. $y'' + 5y' + 6y = 0$, $y(0) = 1$, $y'(0) = -6$.

682. $y'' - 10y' + 25y = 0$, $y(0) = 0$, $y'(0) = 1$.

683. $y'' - 2y' + 10y = 0$, $y\left(\frac{\pi}{6}\right) = 0$, $y'\left(\frac{\pi}{6}\right) = e^{\frac{\pi}{6}}$.

684. $y'' + 3y' = 0$, $y(0) = 1$, $y'(0) = 2$.

$$685. y'' + 9y = 0, \quad y(0) = 0, \quad y'\left(\frac{\pi}{4}\right) = 1.$$

$$686. y'' + y = 0, \quad y(0) = 1, \quad y'\left(\frac{\pi}{3}\right) = 0.$$

$$687. 9y'' + y = 0, \quad y\left(\frac{3\pi}{2}\right) = 2, \quad y'\left(\frac{3\pi}{2}\right) = 0.$$

$$688. y'' - y = 0, \quad y(0) = 2, \quad y'(0) = 4.$$

$$689. y'' + 2y' + 2y = 0, \quad y(0) = 1, \quad y'(0) = 1.$$

42-§. Yuqori tartibli chiziqli bir jinsli bo‘limgan differensial tenglamalar

Ushbu

$$y^{(n)} + a_1(x)y^{(n-1)} + a_2(x)y^{(n-2)} + \dots + a_{n-1}(x)y' + a_n(x)y = f(x) \quad (62)$$

tenglama chiziqli bir jinsli bo‘limgan tenglama deyiladi. (62) tenglamaning umumiy yechimi quyidagi teorema bilan aniqlanadi.

Teorema. Agar $U = U(x)$ funksiya (62) tenglamaning birorta xususiy yechimi bo‘lib, y_1, y_2, \dots, y_n funksiyalar esa mos bir jinsli tenglamaning fundamental yechimlar sistemasini tashkil etsa, bir jinsli bo‘limgan tenglamaning umumiy yechimi

$$y = U + C_1y_1 + C_2y_2 + \dots + C_ny_n, \quad (63)$$

ko‘rinishda bo‘ladi.

Demak, bir jinsli bo‘limgan tenglamaning umumiy yechimi uning biror xususiy yechimi bilan unga mos bir jinsli tenglamaning umumiy yechimlari yig‘indisidan iborat.

Masalaning muhim jihat shundaki, bir jinsli tenglamaning umumiy yechimini xarakteristik tenglama orqali topishni bilamiz, ammo bir jinsli bo‘limgan tenglamaning birorta xususiy yechimini topish masalasi ancha murakkab.

Chiziqli bir jinsli bo‘limgan tenglamaning birorta xususiy yechimini topishning ikki usuli bilan tanishamiz.

1. Ozgarmasni variatsiyalash usuli. Bu usul bir jinsli bo‘limgan tenglamaning birorta xususiy yechimini topish uchun qo‘llaniladi va koefitsiyentlar o‘zgarmas hol uchun ham yaroqlidir.

Mos bir jinsli tenglamaning fundamental yechimlari y_1, y_2, \dots, y_n ma’lum bo‘lsa (62) ning birorta xususiy yechimini

$$U = C_1(x)y_1 + C_2(x)y_2 + \dots + C_n(x)y_n \quad (64)$$

ko'rinishda qidiramiz.

(64) ni (62) ga qo'yib $C_1(x), C_2(x), \dots, C_n(x)$ funksiyalarni aniqlash uchun quyidagi sistemani hosil qilamiz:

$$\begin{cases} C'_1(x)y_1 + C'_2(x)y_2 + \dots + C'_n(x)y_n = 0, \\ C'_1(x)y'_1 + C'_2(x)y'_2 + \dots + C'_n(x)y'_n = 0, \\ \dots \\ C'_1(x)y_1^{(n-2)} + C'_2(x)y_2^{(n-2)} + \dots + C'_n(x)y_n^{(n-2)} = 0, \\ C'_1(x)y_1^{(n-1)} + C'_2(x)y_2^{(n-1)} + \dots + C'_n(x)y_n^{(n-1)} = f(x). \end{cases} \quad (65)$$

Bu sistemadan $C_1(x), C_2(x), \dots, C_n(x)$ larni topib, (64) ga qo'ysak, xususiy yechimga ega bo'lamiz.

Yuqoridagi sistema

$$y'' + a_1(x)y' + a_2(x) = f(x)$$

ikkinchi tartibli tenglama uchun

$$\begin{cases} C'_1(x)y_1 + C'_2(x)y_2 = 0, \\ C'_1(x)y'_1 + C'_2(x)y'_2 = f(x) \end{cases} \quad (66)$$

ko'rinishni oladi va bu sistemaning yechimi quyidagi ko'rinishda bo'ladi:

$$C_1(x) = -\int \frac{y_2 f(x) dx}{W(y_1, y_2)}, \quad C_2(x) = \int \frac{y_1 f(x) dx}{W(y_1, y_2)}.$$

U holda (64) formulaga asosan xususiy yechim quyidagi ko'rinishda bo'ladi:

$$U = -y_1 \int \frac{y_2 f(x) dx}{W(y_1, y_2)} + y_2 \int \frac{y_1 f(x) dx}{W(y_1, y_2)}. \quad (67)$$

Bu formuladagi $W(y_1, y_2)$ ifoda y_1, y_2 yechimlarning Vronskiy determinantidan iborat.

690. $y'' + \frac{2}{x}y' + y = \frac{\sin x}{x}$ tenglamaning umumiy yechimini toping.

Yechish. $y'' + \frac{2}{x}y' + y = 0$ bir jinsli tenglama uchun 645-misolda

$y_1 = \frac{\sin x}{x}$ ekanini bilgan holda $y_2 = -\frac{\cos x}{x}$ ni aniqlagan edik. Vronskiy determinantini topamiz:

$$W(y_1, y_2) = \begin{vmatrix} \frac{\sin x}{x} & -\frac{\cos x}{x} \\ \frac{x \cos x - \sin x}{x^2} & \frac{x \sin x + \cos x}{x^2} \end{vmatrix} = \frac{1}{x^2}.$$

Demak, y_1, y_2 yechimlar chiziqli erkli, ya'ni fundamental sistema tashkil etadi. U holda bir jinsli tenglamaning umumiy yechimi

$$y = C_1 \frac{\sin x}{x} + C_2 \frac{\cos x}{x}$$

ko'rinishda bo'ladi. Bundan esa xususiy yechim (67) formulaga asosan quyidagicha aniqlanadi:

$$\begin{aligned} U &= -\frac{\sin x}{x} \int \frac{\cos x \cdot ctgx}{\frac{1}{x^2}} dx - \frac{\cos x}{x} \int \frac{\sin x \cdot ctgx}{\frac{1}{x^2}} dx = \frac{\sin x}{x} \int \frac{\cos^2 x}{\sin x} dx - \\ &- \frac{\cos x}{x} \int \cos x dx = \frac{\sin x}{x} \left[\ln \left| \tg \frac{x}{2} \right| + \cos x \right] - \frac{\cos x}{x} \sin x = \frac{\sin x}{x} \ln \left| \tg \frac{x}{2} \right|. \end{aligned}$$

Natijada (63) formulaga asosan, umumiy yechim quyidagicha bo'ladi:

$$y = C_1 \frac{\sin x}{x} - C_2 \frac{\cos x}{x} + \frac{\sin x}{x} \ln \left| \tg \frac{x}{2} \right|$$

Ushbu misoldan ko'rindiki, (62) tenglamaga mos bir jinsli tenglamaning birorta $y_i(x)$ xususiy yechimi ma'lum bo'lsa, uning umumiy yechimi

$$y = C_1 y_1 + C_2 y_2 + U(x)$$

ko'rinishda bo'lib, bu yerda

$$y_2 = y_1 \int \frac{e^{-\int a_1(x) dx}}{y_1^2} dx$$

formula orqali, $U(x)$ esa (67) formula bilan topilar ekan.

2. Noma'lum koeffitsiyentlar usuli.

Bu usuldan faqat tenglamaning koeffitsiyentlari o'zgarmas bo'lganda foydalilanadi.

Soddalik uchun o'zgarmas koeffitsiyentli ikkinchi tartibli bir jinsli bo'lgan tenglamani ko'ramiz.

$$y'' + a_1 y' + a_2 y = f(x). \quad (68)$$

Bu tenglama uchun xususiy yechimni qidirish, $f(x)$ funksiyaning berilishidan kelib chiqadi. Quyidagi hollarni ko'rib o'tamiz.

1. $f(x) = P_n(x)e^{\alpha x}$ bo'lgan holda:

a) α son $k^2 + a_1 k + a_2 = 0$ xarakteristik tenglamaning ildizlari bo'limasa, xususiy yechim

$$U(x) = Q_n(x)e^{\alpha x} \quad (69)$$

ko'rinishda qidiriladi, bu yerda $P_n(x)$ hamda $Q_n(x)$ lar n -tartibli ko'phadlardir.

b) α son $k^2 + a_1 k + a_2 = 0$ xarakteristik tenglamaning bir karrali ildizi bo'lsa, xususiy yechim

$$U(x) = x Q_n(x)e^{\alpha x} \quad (70)$$

ko'rinishda qidiriladi.

d) α son $k^2 + a_1 k + a_2 = 0$ xarakteristik tenglamaning ikki karrali ildizi bo'lsa, xususiy yechim

$$U(x) = x^2 Q_n(x)e^{\alpha x} \quad (71)$$

ko'rinishda qidiriladi.

2. $f(x) = e^{\alpha x} [P_n(x)\cos\beta x + Q_n(x)\sin\beta x]$ bo'lgan holda:

a) $\alpha + i\beta$ son $k^2 + a_1 k + a_2 = 0$ xarakteristik tenglamaning ildizlari bo'limasa, xususiy yechim

$$U(x) = e^{\alpha x} [P_l(x)\cos\beta x + Q_l(x)\sin\beta x] \quad (72)$$

ko'rinishda qidiriladi, bu yerda $l = \max(n, m)$.

b) $\alpha + i\beta$ son $k^2 + a_1 k + a_2 = 0$ xarakteristik tenglamaning ildizi bo'lsa, xususiy yechim

$$U(x) = x e^{\alpha x} [P_l(x)\cos\beta x + Q_l(x)\sin\beta x] \quad (73)$$

ko'rinishda qidiriladi, bu yerda $l = \max(n, m)$.

691. $y'' - 2y' + 2y = x^2$ tenglamaning umumiy yechimini toping.

Yechish. Xarakteristik tenglamasi $k^2 - 2k + 2 = 0 \Rightarrow k_{1,2} = 1 \pm i$.

Demak, bir jinsli tenglamaning umumiy yechimi $y = e^x (C_1 \cos x + C_2 \sin x)$ ko'rinishda bo'ladi. $f(x) = x^2 = e^{0x} P_2(x)$ bo'lgani uchun xususiy yechimni

$$U(x) = Ax^2 + Bx + C$$

ko'rinishda izlaymiz. Bu yechimni tenglamaga qo'ysak:

$$2A - 4Ax - 2B + 2Ax^2 + 2Bx + 2C = x^2 \Rightarrow \\ 2Ax^2 + (-4A + 2B)x + (2A - 2B + 2C) = 1 \cdot x^2 + 0 \cdot x + 0.$$

Natijada ushbu sistemaga kelamiz:

$$\begin{cases} 2A = 1, \\ -4A + 2B = 0, \\ 2A + 2B + 2C = 0 \end{cases} \Rightarrow A = \frac{1}{2}, \quad B = 1, \quad C = \frac{1}{2}.$$

Demak, izlangan yechim quyidagi ko'rinishda bo'ladi:

$$y = e^x (C_1 \cos x + C_2 \sin x) + \frac{1}{2}(x+1)^2.$$

692. $y'' + y = xe^x + 2e^{-x}$ tenglamaning umumiy yechimini toping.

Yechish. Xarakteristik tenglama $k^2 + 1 = 0 \Rightarrow k_{1,2} = \pm i$. Demak, bir jinsli tenglamaning umumiy yechimi $y = C_1 \cos x + C_2 \sin x$ ko'rinishda bo'ladi.

$$f(x) = f_1(x) + f_2(x) = xe^x + 2e^{-x} \quad \text{hamda} \quad \alpha_1 = 1, \quad \alpha_2 = -1, \quad \beta_1 = \beta_2 = 0, \\ P_1(x) = x \text{ bo'lgani uchun xususiy yechimni}$$

$$U(x) = U_1(x) + U_2(x) = (Ax + B)e^x + Ce^{-x}$$

ko'rinishda izlaymiz. Bu yechimni tenglamaga qo'ysak,

$$2Ae^x + (Ax + B)e^x + Ce^{-x} + (Ax + B)e^x + Ce^{-x} = xe^x + 2e^{-x},$$

$$(2Ax + 2A + 2B)e^x + 2Ce^{-x} = (1 \cdot x + 0)e^x + 2e^{-x}.$$

Natijada quyidagi sistemaga kelamiz:

$$\begin{cases} 2A = 1, \\ 2A + 2B = 0, \\ C = 1, \end{cases} \Rightarrow A = \frac{1}{2}, \quad B = -\frac{1}{2}, \quad C = 1.$$

Demak, umumiy yechim quyidagi ko'rinishda bo'ladi:

$$y = C_1 \cos x + C_2 \sin x + \frac{1}{2}(x-1)e^x + e^{-x}.$$

693. $y''' + y'' - 2y' = x - e^x$ tenglamaning umumiy yechimini toping.

Yechish. Xarakteristik tenglama

$$k^3 + k^2 - 2k = 0 \Rightarrow k_1 = -2, \quad k_2 = 0, \quad k_3 = 1.$$

Demak, bir jinsli tenglamaning umumiy yechimi

$$y = C_1 + C_2 e^x + C_3 e^{-2x}$$

ko'rinishda bo'ladi. O'ng tomondagi funksiya:

$$f(x) = f_1(x) + f_2(x) = x - e^x,$$

$\alpha_1 = 0$, $P_1(x) = x$, $\alpha_2 = 1$, $P_0(x) = -1$, $\beta_1 = \beta_2 = 0$, $P_1(x) = x$
bo'ladi bundan xususiy yechimni:

$$U(x) = U_1(x) + U_2(x) = x(Ax + B)e^x + Cxe^{-x}$$

korinishda izlaysiz. Bu yechimni tenglamaga qo'ysak

$$\begin{aligned} 3Ce^x + Cxe^x + 2A + 2Ce^x + Cxe^{-x} - 4Ax - 2B - 2Cxe^x &= x - e^x, \\ \Rightarrow -4Ax + (2A - 2B) + 3Ce^x &= x - e^x. \end{aligned}$$

Natijada quyidagi sistemaga kelamiz:

$$\begin{cases} -4A = 1, \\ 2A - 2B = 0, \Rightarrow A = B = -\frac{1}{4}, \\ 3C = -1, \end{cases} \quad C = -\frac{1}{3}.$$

Demak, dastlabki tenglamaning umumiy yechimi, quyidagi ko'rinishda bo'ladi:

$$y = C_1 + C_2e^x + C_3e^{-2x} - \frac{1}{4}x(x+1)e^x - \frac{1}{3}xe^{-x}.$$

694. $y'' - 2y' - 3y = e^{4x}$ tenglamaning $y(\ln 2) = 1$, $y(\ln 4) = 1$ chegaraviy shartlarni qanoatlantiruvchi xususiy yechimini toping.

Yechish. Xarakteristik tenglama $k^2 - 2k - 3 = 0 \Rightarrow k_1 = -1$, $k_2 = 3$. Demak, bir jinsli tenglamaning umumiy yechimi $y = C_1e^{-x} + C_2e^{3x}$ ko'rinishda bo'ladi. $f(x) = 1 \cdot e^{4x}$, $\alpha = 4$, $P_0 = 1$ bo'lgani uchun (69) formuladan xususiy yechim

$$U(x) = Ae^{4x}$$

ko'rinishda bo'ladi. Bu yechimni tenglamaga qo'ysak:

$$16Ae^{4x} - 8Ae^{4x} - 3Ae^{4x} = e^{4x} \Rightarrow 5A = 1 \Rightarrow A = \frac{1}{5}.$$

Bundan, umumiy yechim (63) formulaga asosan, quyidagicha bo'ladi:

$$y = C_1e^{-x} + C_2e^{3x} + \frac{1}{5}e^{4x}.$$

Chegaraviy shartlardan foydalanib, xususiy yechimni topamiz.

$$\begin{cases} C_1e^{-\ln 2} + C_2e^{3\ln 2} + \frac{1}{5}e^{4\ln 2} = 1, \\ C_1e^{-2\ln 2} + C_2e^{6\ln 2} + \frac{1}{5}e^{8\ln 2} = 1, \end{cases} \Rightarrow \begin{cases} \frac{1}{2}C_1 + 8C_2 + \frac{16}{5} = 1, \\ \frac{1}{4}C_1 + 64C_2 + \frac{256}{5} = 1, \end{cases} \Rightarrow \begin{cases} C_1 = \frac{652}{75}, \\ C_2 = -\frac{491}{600}. \end{cases}$$

Demak, izlanayotgan xususiy yechim

$$y = \frac{652}{75}e^{-x} - \frac{491}{600}e^{3x} + \frac{1}{5}e^{4x}.$$

695. $y'' + y' - 2y = \cos x - 3\sin x$ tenglamaning $y(0) = 1, y'(0) = 2$ boshlang'ich shartlarni qanoatlantiruvchi xususiy yechimini toping.

Yechish. Xarakteristik tenglama $k^2 + k - 2 = 0 \Rightarrow k_1 = -2, k_2 = 1$. Demak, bir jinsli tenglamaning umumiy yechimi $y = C_1 e^{-2x} + C_2 e^x$ ko'rinishda bo'ladi. $f(x) = e^{0x}(\cos x - 3\sin x)$, $\alpha = 4, \beta = 1$ bo'lgani uchun (60) formuladan xususiy yechimni:

$$U(x) = A\cos x + B\sin x,$$

ko'rinishda izlaymiz. Bu yechimni tenglamaga qo'ysak :

$$\begin{aligned} & -A\cos x - B\sin x - A\sin x + B\cos x - 2A\cos x - 2B\sin x = \cos x - 3\sin x, \\ & \Rightarrow (B - 3A)\cos x - (3B + A)\sin x = \cos x - 3\sin x. \end{aligned}$$

Mos koeffitsiyentlarni tenglab, quyidagi sistemaga kelamiz:

$$\begin{cases} B - 3A = 1, \\ 3B + A = 3 \end{cases} \Rightarrow A = 0, B = 1.$$

Bundan esa umumiy yechim quyidagi ko'rinishda bo'ladi:

$$y = C_1 e^{-2x} + C_2 e^x + \sin x.$$

Boshlang'ich shartlardan foydalanib, quyidagi sistemaga kelamiz:

$$\begin{cases} C_1 e^0 + C_2 e^0 = 1, \\ -2C_1 e^0 + C_2 e^0 + \cos 0 = 2 \end{cases} \Rightarrow C_1 = 0, C_2 = 1.$$

Demak, xususiy yechim quyidagi ko'rinishda bo'ladi:

$$y = e^x + \sin x.$$

696. $y'' - y' = ch2x$ tenglamaning $y(0) = y'(0) = 0$ boshlang'ich shartlarni qanoatlantiruvchi xususiy yechimini toping.

Yechish. Xarakteristik tenglama $k^2 - k = 0 \Rightarrow k_1 = 0, k_2 = 1$. Demak, bir jinsli tenglamaning umumiy yechimi $y = C_1 + C_2 e^x$ ko'rinishda bo'ladi. $f(x) = e^{0x}(1 \cdot ch2x + 0 \cdot sh2x)$, $\alpha = 0, \beta = 2$ bo'lgani uchun (60) formuladan xususiy yechimni:

$$U(x) = Ach2x + Bsh2x,$$

ko'rinishda izlaymiz. Bu yechimni tenglamaga qo'ysak:

$$4Ach2x + 4Bsh2x - 2Ach2x - 2Bsh2x = ch2x,$$

$$(4A - 2B)ch2x + (4B - 2A)sh2x = 1 \cdot ch2x + 0 \cdot sh2x$$

Shunday qilib, mos koeffitsiyentlarni tenglab, quyidagi sistema kelamiz:

$$\begin{cases} 4A - 2B = 1, \\ -2A + 4B = 0 \end{cases} \Rightarrow A = \frac{1}{3}, \quad B = \frac{1}{6}.$$

Demak, umumiy yechim quyidagi ko'rnishda bo'ladi:

$$y = C_1 + C_2 e^x + \frac{1}{3} ch2x + \frac{1}{6} sh2x.$$

Boshlang'ich shartlardan foydalanib, quyidagi sistemaga kelamiz:

$$\begin{cases} C_1 + C_2 e^0 + \frac{1}{3} ch0 + \frac{1}{6} sh0 = 0, \\ C_2 e^0 + \frac{2}{3} sh0 + \frac{1}{3} ch0 = 0 \end{cases} \Rightarrow \begin{cases} C_1 + C_2 = -\frac{1}{3}, \\ C_2 + \frac{1}{3} = 0 \end{cases} \Rightarrow C_1 = 0, \quad C_2 = -\frac{1}{3}.$$

Demak, xususiy yechim quyidagi ko'rnishda bo'ladi:

$$y = -\frac{1}{3} e^x + \frac{1}{3} ch2x + \frac{1}{6} sh2x.$$

$$697. \quad y'' + y = 3 \sin x \text{ tenglamaning } y(0) + y'(0) = 0, \quad y\left(\frac{\pi}{2}\right) + y'\left(\frac{\pi}{2}\right) = 0$$

cheagaraviy shartlarni qanoatlantiruvchi xususiy yechimini toping.

Yechish. Xarakteristik tenglama $k^2 + 1 = 0 \Rightarrow k_{1,2} = 0 \pm i$. Demak, bir jinsli tenglamadan umumiy yechimi $y = C_1 \cos x + C_2 \sin x$ ko'rnishda bo'ladi. $f(x) = e^{0x}(3 \sin x + 0 \cos x)$, $\alpha = 0$, $\beta = 1$ bo'lgani uchun (73) formuladan xususiy yechimni:

$$U(x) = x(A \cos x + B \sin x)$$

ko'rnishda izlaymiz. Bu yechimni tenglamaga qo'ysak:

$$-2A \sin x + 2B \cos x - Ax \cos x - Bx \sin x + Ax \cos x + Bx \sin x = 3 \sin x,$$

$$\Rightarrow -2A \sin x + 2B \cos x = 3 \sin x + 0 \cos x.$$

Shunday qilib, mos koeffitsiyentlarni tenglab, quyidagi sistema kelamiz:

$$\begin{cases} -2A = 3, \\ 2B = 0, \end{cases} \Rightarrow A = -\frac{3}{2}, \quad B = 0.$$

Demak, umumiy yechim quyidagi ko'rnishda bo'ladi:

$$y = C_1 \cos x + C_2 \sin x - \frac{3}{2} x \cos x.$$

Boshlang'ich shartlarni qanoatlantiramiz:

$$y' = -C_1 \sin x + C_2 \cos x - \frac{3}{2} \cos x + \frac{3}{2} x \sin x,$$

$$y(0) = C_1 \cos 0 + C_2 \sin 0 - \frac{3}{2} 0 \cdot \cos 0 = C_1,$$

$$y'(0) = -C_1 \sin 0 + C_2 \cos 0 - \frac{3}{2} \cos 0 + \frac{3}{2} 0 \sin 0 = C_2 - \frac{3}{2},$$

$$y\left(\frac{\pi}{2}\right) = C_1 \cos \frac{\pi}{2} + C_2 \sin \frac{\pi}{2} - \frac{3}{2} \frac{\pi}{2} \cos \frac{\pi}{2} = C_2, \\$$

$$y'\left(\frac{\pi}{2}\right) = -C_1 \sin \frac{\pi}{2} + C_2 \cos \frac{\pi}{2} - \frac{3}{2} \cos \frac{\pi}{2} + \frac{3}{2} \frac{\pi}{2} \sin \frac{\pi}{2} = -C_1 + \frac{3\pi}{4}.$$

Berilgan chegaraviy shartlarni e'tiborga olsak, quyidagi sistemaga kelamiz:

$$\begin{cases} C_1 + C_2 - \frac{3}{2} = 0, \\ C_2 - C_1 + \frac{3\pi}{4} = 0 \end{cases} \Rightarrow \begin{cases} C_1 + C_2 = \frac{3}{2}, \\ -C_1 + C_2 = -\frac{3\pi}{4} \end{cases} \Rightarrow C_1 = \frac{3(2 + \pi)}{8}, \quad C_2 = \frac{3(2 - \pi)}{4}.$$

Demak, xususiy yechim quyidagi ko'rinishda bo'ladi:

$$y = \frac{3}{8} [(\pi + 2) \cos x - (\pi - 2) \sin x] - \frac{3}{2} x \cos x.$$

698. $y'' + 6y' + 10y = 80e^x \cos x$ tenglamaning $y(0) = 4, y'(0) = 10$ boshlang'ich shartlarni qanoatlantiruvchi xususiy yechimini toping.

Yechish.

Xarakteristik tenglama $k^2 + 6k + 10 = 0 \Rightarrow k_{1,2} = -3 \pm i$. Demak, bir jinsli tenglamaning umumiy yechimi $y = e^{-3x}(C_1 \cos x + C_2 \sin x)$ ko'rinishda bo'ladi. $f(x) = e^x(80 \cos x + 0 \sin x), \alpha = 1, \beta = 1$ bo'lgani uchun (60) formuladan xususiy yechimini:

$$U(x) = e^x(A \cos x + B \sin x)$$

ko'rinishda izlaymiz. Bu yechimni tenglamaga qo'ysak:

$$e^x(-2A \sin x + 2B \cos x) + 6e^x(A \cos x + B \sin x - A \sin x + B \cos x) +$$

$$+ 10e^x(A \cos x + B \sin x) = 80e^x \cos x \Rightarrow$$

$$(16A + 8B) \cos x + (-8A + 16B) \sin x = 80 \cos x + 0 \sin x.$$

Mos koeffitsiyentlarni tenglab, quyidagi sistemaga kelamiz:

$$\begin{cases} 16A + 8B = 80 \\ -8A + 16B = 0 \end{cases} \Rightarrow A = 4, \quad B = 2.$$

Bundan esa umumiy yechim quyidagi ko'rinishda bo'ladi:

$$y = e^{-3x} (C_1 \cos x + C_2 \sin x) + 2e^x (2 \cos x + \sin x).$$

Boshlang'ich shartlardan foydalanib, xususiy yechimni topamiz.

$$y' = e^{-3x} (-3C_1 \cos x - 3C_2 \sin x - C_1 \sin x + C_2 \cos x) + 2e^x (3 \cos x - \sin x),$$

$$y(0) = C_1 + 4 = 4, \quad y'(0) = -3C_1 + C_2 + 6 = 10 \Rightarrow C_1 = 0, \quad C_2 = 4.$$

Demak, xususiy yechim quyidagi ko'rinishda bo'ladi:

$$y = 4e^{-3x} \sin x + 2e^x (2 \cos x + \sin x).$$

$$699. \quad y'' + y = \operatorname{tg} x \quad \text{tenglamaning} \quad y(0) = y\left(\frac{\pi}{6}\right) = 0 \quad \text{boshlang'ich}$$

shartlarni qanoatlantiruvchi xususiy yechimini toping.

Yechish. Xarakteristik tenglama $k^2 + 1 = 0 \Rightarrow k_{1,2} = i$. Demak, bir jinsli tenglamaning umumiy yechimi $y = C_1 \cos x + C_2 \sin x$ ko'rinishda bo'ladi. $f(x) = \operatorname{tg} x$ bo'lgani uchun xususiy yechimni noma'lum koeffitsiyentlar usuli bilan izlab bo'lmaydi. Shuning uchun o'zgarmasni variatsiyalash usulidan foydalananz.

$y = C_1(x) \cos x + C_2(x) \sin x$ deb olsak $C_1(x)$ va $C_2(x)$ funksiyalarni aniqlash uchun (65) formulaga asosan, quyidagi sistemaga kelamiz:

$$\begin{cases} C'_1(x)y_1 + C'_2(x)y_2 = 0, \\ C'_1(x)y'_1 + C'_2(x)y'_2 = f(x), \end{cases} \Rightarrow \begin{cases} C'_1(x) \cos x + C'_2(x) \sin x = 0, \\ -C'_1(x) \sin x + C'_2(x) \cos x = \operatorname{tg} x. \end{cases}$$

Bu sistemani yechib,

$$C_1(x) = -\int \frac{\sin^2 x}{\cos x} dx + A = \sin x - \ln \left| \operatorname{tg} \left(\frac{x}{2} + \frac{\pi}{4} \right) \right| + A, \Rightarrow C_2(x) = -\cos x + B$$

ekanini topamiz.

Shunday qilib, berilgan tenglamaning umumiy yechimi

$$y = A \cos x + B \sin x - \cos x \ln \left| \operatorname{tg} \left(\frac{x}{2} + \frac{\pi}{4} \right) \right|.$$

Chegaraviy shartlardan:

$$\begin{cases} A \cos 0 + B \sin 0 - \cos 0 \ln \left| \operatorname{tg} \left(\frac{0}{2} + \frac{\pi}{4} \right) \right| = 0, \\ A \cos \frac{\pi}{6} + B \sin \frac{\pi}{6} - \cos \frac{\pi}{6} \ln \left| \operatorname{tg} \left(\frac{\pi}{12} + \frac{\pi}{4} \right) \right| = 0, \end{cases} \Rightarrow A = 0, \quad B = \frac{\sqrt{3}}{2} \ln 3.$$

Demak, xususiy yechim quyidagicha bo'ladi:

$$y = \frac{\sqrt{3}}{2} \ln 3 \cdot \sin x - \cos x \ln \left| \operatorname{tg} \left(\frac{x}{2} + \frac{\pi}{4} \right) \right|.$$

Quyidagi tenglamalarni yeching

700. $y'' - 2y' + y = e^{2x}$.

701. $y'' - 4y = 8x^2$.

702. $y'' + 3y' + 2y = \sin 2x + \cos 2x$.

703. $y'' + y = x + 2e^x$.

704. $y'' + 3y = 9x$.

705. $y'' + 4y' + 5y = 5x^2 - 32x + 5$.

706. $y'' - 3y' + 2y = e^x$.

707. $y'' + 5y' + 6y = e^{-x} + e^{-2x}$.

708. $y''' + y'' = 6x + e^x$.

709. $y'' + y' - 2y = 6x^2$.

710. $4y'' - y = x^3 - 24x$.

711. $y'' + y' + 2,5y = 25\cos 2x$.

712*. $y'' + 2y' + y = e^x$.

713*. $y'' - 5y' + 6y = 13\sin 3x$.

714. $y'' - 4y' + 3y = e^{5x}$, $y(0) = 0$, $y'(0) = 9$.

715. $y'' - 8y' + 16y = e^{4x}$, $y(0) = 0$, $y'(0) = 1$.

716. $y'' + y = \cos 3x$, $y\left(\frac{\pi}{2}\right) = 4$, $y'\left(\frac{\pi}{2}\right) = 1$.

717. $2y'' - y' = 1$, $y(0) = 0$, $y'(0) = 1$.

718. $y'' + 4y = \sin 2x + 1$, $y(0) = \frac{1}{4}$, $y'(0) = 0$.

719. $y'' + 4y = \cos 2x$, $y(0) = y\left(\frac{\pi}{4}\right) = 0$.

720. $y'' - y = 2s/x$, $y(0) = 0$, $y'(0) = 1$.

721*. $y'' - 4y' + 8y = 61e^{2x} \sin x$, $y(0) = 0$, $y'(0) = 4$.

43-§. Eyler tenglamasi

O‘zgaruvchi koeffitsiyentli chiziqli

$$x^n y^{(n)} + a_1 x^{n-1} y^{(n-1)} + \dots + a_{n-1} x y' + a_n y = f(x) \quad (74)$$

yoki

$$(\alpha x + b)^n y^{(n)} + a_1 (\alpha x + b)^{n-1} y^{(n-1)} + \dots + a_{n-1} (\alpha x + b) y' + a_n y = f(x) \quad (75)$$

tenglama **Eyler tenglamasi** deb ataladi, a_i - bu tenglama uchun o‘zgarmas koeffitsiyentlar.

(74) tenglama uchun $x = e^t$ va (75) tenglamani esa $\alpha x + b = e^t$ almashtirish orqali o‘zgarmas koeffitsiyentli chiziqli tenglamaga keltiriladi.

722. $x^2 y'' - xy' + y = 0$ tenglamani yeching.

Yechish. $x = e^t \Rightarrow t = \ln x$, $\frac{dt}{dx} = \frac{1}{x} = \frac{1}{e^t} = e^{-t}$ almashtirish bajarib, $y = y(x) = y[x(t)]$ funksiyaning murakkab funksiya sifatidagi hosilasini topamiz:

$$y' = \frac{dy}{dx} = \frac{dy}{dt} \frac{dt}{dx} = \dot{y}e^{-t},$$

$$y'' = \frac{d}{dt}(\dot{y}e^{-t}) \frac{dt}{dx} = (\ddot{y}e^{-t} - e^{-t}\dot{y})e^{-t} = e^{-2t}(\ddot{y} - \dot{y}).$$

Bu yerda \dot{y} va \ddot{y} ko‘rinishida t bo‘yicha hosilalar belgilandi. Bularni e’tiborga olsak, dastlabki tenglama quyidagi holga keladi:

$$e^{2t}e^{-2t}(\ddot{y} - \dot{y}) - e^{-t}\dot{y} + y = 0 \Rightarrow \ddot{y} - 2\dot{y} + y = 0.$$

Bu tenglamaning xarakteristik tenglamasi:

$$k^2 - 2k + 1 = 0 \Rightarrow k_1 = k_2 = 1,$$

umumiy yechimi esa quyidagich bo‘ladi:

$$y = (C_1 + C_2t)e^t = (C_1 + C_2 \ln x) \cdot x.$$

723. $(4x-1)^2 y'' - 2(4x-1)y' + 8y = 0$ tenglamani yeching.

Yechish. $4x-1 = e^t \Rightarrow x = \frac{1}{4}(e^t + 1) \Rightarrow \frac{dx}{dt} = \frac{1}{4}e^t \Rightarrow \frac{dt}{dx} = 4e^{-t}$, almashtirish bajarib, hosilasini topamiz:

$$y' = \frac{dy}{dt} \frac{dt}{dx} = 4\dot{y}e^{-t},$$

$$y'' = \frac{d}{dt}(4\dot{y}e^{-t}) \frac{dt}{dx} = (4\ddot{y}e^{-t} - 4e^{-t}\dot{y})4e^{-t} = 16e^{-2t}(\ddot{y} - \dot{y}).$$

Bularni e’tiborga olsak, dastlabki tenglama quyidagi holga keladi:

$$16e^{2t}e^{-2t}(\ddot{y} - \dot{y}) - 4 \cdot 2e^{-t}\dot{y} + 8y = 0 \Rightarrow 2\ddot{y} - 3\dot{y} + y = 0.$$

Bu tenglamaning xarakteristik tenglamasi

$$2k^2 - 3k + 1 = 0 \Rightarrow k_1 = 1, k_2 = \frac{1}{2}.$$

Natijada umumiy yechimi esa quyidagicha bo‘ladi:

$$y = C_1 e^t + C_2 e^{\frac{1}{2}t} = C_1(4x-1) + C_2 \sqrt{4x-1}.$$

724. $y'' - xy' + y = \cos(\ln x)$ tenglamani yeching.

Yechish. $x = e^t \Rightarrow t = \ln x$, $\frac{dt}{dx} = \frac{1}{x} = \frac{1}{e^t} = e^{-t}$ almashtirish bajarib, hosilasini topamiz:

$$y' = \frac{dy}{dx} = \frac{dy}{dt} \frac{dt}{dx} = \dot{y} e^{-t},$$

$$y'' = \frac{d^2}{dt^2} (\dot{y} e^{-t}) \frac{dt}{dx} = (\ddot{y} e^{-t} - e^{-t} \dot{y}) e^{-t} = e^{-2t} (\ddot{y} - \dot{y}).$$

Bularni e'tiborga olsak, dastlabki tenglama quyidagi holga keladi:
 $e^{2t} e^{-2t} (\ddot{y} - \dot{y}) - e^{-t} \dot{y} + y = \cos t \Rightarrow \ddot{y} - 2\dot{y} + y = \cos t.$

Bu tenglamaning xarakteristik tenglamasi

$$k^2 - 2k + 1 = 0 \Rightarrow k_1 = k_2 = 1,$$

umumiy yechimi esa quyidagich bo'ladi:

$$y = (C_1 + C_2 t) e^t.$$

$f(x) = (1 \cdot \cos t + 0 \cdot \sin t) e^{0t}$ bo'lgani uchun xususiy yechimni

$$U(t) = A \cos t + B \sin t$$

ko'rinishda qidiramiz. Hosilalarni hisoblab,

$$U'(t) = -A \sin t + B \cos t, \quad U''(t) = -A \cos t - B \sin t$$

tenglamaga qo'ysak,

$$-A \cos t - B \sin t + 2A \sin t - 2B \cos t + A \cos t + B \sin t = \cos t, \Rightarrow$$

$$-2B \cos t + 2A \sin t = \cos t.$$

Noma'lum koefitsiyentlarni aniqlaymiz:

$$\begin{cases} A = 0, \\ -2B = 1 \end{cases} \Rightarrow B = -\frac{1}{2}, \quad A = 0.$$

Demak, $U(t) = -\frac{1}{2} \sin t$ hamda umumiy yechim

$$y = (C_1 + C_2 t) e^t - \frac{1}{2} \sin t \text{ ko'rinishda bo'ladi.}$$

Yechimdagisi t o'zgaruvchini x orqali ifodalasak,

$$y = (C_1 + C_2 \ln x) x - \frac{1}{2} \sin \ln x,$$

umumiy yechim bo'ladi.

Quyidagi Eyler tenglamalarini yeching

725. $x^2 y'' - 2y' = 0.$

726. $x^2 y'' + 2xy' - n(n+1)y = 0.$

727. $x^2 y'' + 5xy' + 4y = 0.$

728. $x^2 y'' + xy' + y = 0.$

729. $xy'' + 2y' = 10x.$

730. $x^2 y'' - 6y = 12 \ln x.$

731. $x^2 y'' - xy' + 2y = 0.$

732. $x^2 y'' - 3xy' + 3y = 3 \ln^2 x.$

733. $x^3 y'' - 3xy' + 3y = 0.$

734. $x^2 y'' - 2xy' + 2y = 4x.$

735. $x^3 y'' + 3x^2 y' + xy = 6 \ln x.$

736. $x^2 y'' - 4xy' + 6y = x^4.$

$$737*. x^2y'' + xy' + y = x.$$

$$738*. x^2y'' + xy' + y = \sin(2\ln x).$$

$$739. x^2y'' + 3xy' + y = \frac{1}{x}, \quad y(1) = 1, \quad y'(1) = 0.$$

$$740. x^2y'' - 3xy' + 4y = \frac{1}{2}x^3, \quad y(1) = \frac{1}{2}, \quad y'(4) = 0.$$

44-§. Differensial tenglamalar sistemasini o'rniغا qo'yish usulida yechish

Ushbu

$$\frac{dx_i}{dt} = f_i(t, x_1, x_2, \dots, x_n), \quad (i=1, n) \quad (76)$$

ko'rinishdagi sistema **birinchi tartibli n ta differensial tenglamalarning normal sistemasi** yoki $x_i = x_i(t)$ noma'lum funksiyaning hosilasiga nisbatan yechilgan differensial tenglamalar sistemasi deyiladi. Bunda tenglamalar soni noma'lum funksiyalar soniga teng, deb faraz qilinadi.

Agar (76) sistemaning o'ng tomonidagi $f_i \quad (i=1, n)$ funksiyalar x_1, x_2, \dots, x_n larga nisbatan chiziqli bo'lsa, u vaqtida (76) sistema **chiziqli differensial tenglamalar sistemasi** deyiladi.

(76) sistemaning $(a; b)$ intervaldagи yechimi deb, $(a; b)$ intervalda uzluksiz differensiallanuvchi va sistemaning barcha tenglamalarini qanoatlantiradigan n ta $x_1(t), x_2(t), \dots, x_n(t)$ funksiyalar to'plamiga aytildi.

Differensial tenglamalarning normal sistemasi uchun Koshi masalasi shunday yechimni topishdan iboratki, u $t = t_0$ da berilgan quyidagi qiymatlarni qabul qilsin:

$$x_1|_{t=t_0} = x_{10}, \quad x_2|_{t=t_0} = x_{20}, \dots, \quad x_n|_{t=t_0} = x_{n0}. \quad (77)$$

Bu qiymatlар (76) normal sistemaning boshlang'ich shartlari deyiladi. Ularning soni noma'lum funksiyalar soni bilan bir xil.

(76) sistemaning umumiy yechimi deb, n ta ixtiyoriy C_1, C_2, \dots, C_n o'zgarmaslarga bog'liq bo'lgan ushbu $x_i = \varphi_i(t, C_1, C_2, \dots, C_n)$ funksiyalar sistemasiga aytildi. Ixtiyoriy o'zgarmaslarning mumkin bo'lgan barcha qiymatlarda hosil bo'ladigan yechimlar xususiy yechimlar deyiladi.

n -tartibli bitta differensial tenglamani tenglamalarning normal sistemasiga keltirish mumkin. Umuman aytganda, buning aksi ham o'rinli, ya'ni birinchi tartibli n ta differensial tenglamaning normal sistemasi n -tartibli bitta differensial tenglamaga ekvivalentdir. Bu usulni o'rniga qo'yish usuli ham deb aytildi.

O'rniga qo'yish usulini ikkita birinchi tartibli differensial tenglamalar sistemasini ikkinchi tartibli tenglamaga keltirib, ishonch hosil qilamiz.

Quyidagi differensial tenglamalar sistemasi berilgan bo'lsin.

$$\begin{cases} \frac{dx}{dt} = ax + by + f(t), \\ \frac{dy}{dt} = cx + dy + g(t). \end{cases} \quad (78)$$

Bu yerda a, b, c, d lar o'zgarmas koefitsiyentlar, $f(t), g(t)$ lar berilgan funksiyalar, $x(t), y(t)$ lar esa noma'lum funksiyalar.

(78) sistemaning birinchi tenglamasidan y ni topamiz:

$$y = \frac{1}{b} \left(\frac{dx}{dt} - ax - f(t) \right). \quad (79)$$

(79) ni t bo'yich differensiallaymiz:

$$\frac{dy}{dt} = \frac{1}{b} \left(\frac{d^2x}{dt^2} - a \frac{dx}{dt} - \frac{df}{dt} \right). \quad (80)$$

(79) va (80) ni (78) ga qo'yamiz. Natijada ushbu $x(t)$ ga nisbatan ikkinchi tartibli differensial tenglamani hosil qilamiz:

$$A \frac{d^2x}{dt^2} + B \frac{dx}{dt} + Cx + P(t) = 0, \quad (81)$$

bu yerda A, B, C lar o'zgarmas sonlar.

741. Quyidagi tenglamalar sistemasi o'rniga qo'yish usuli bilan yeching.

$$\begin{cases} \frac{dx}{dt} = y + 1, \\ \frac{dy}{dt} = x + 1. \end{cases}$$

Yechish. Birinchi tenglamadan y ni topamiz. $y = \frac{dx}{dt} - 1$ ni t

bo'yicha differensiallaymiz: $\frac{dy}{dt} = \frac{d^2x}{dt^2}$, natijani ikkinchi tenglamaga

qo'yib, quyidagi ikkinchi tartibli o'zgarmas koeffitsiyentli tenglamaga kelamiz:

$$\frac{d^2x}{dt^2} - x - 1 = 0.$$

Bu tenglamaning yechimi:

$$x = C_1 e^t + C_2 e^{-t} - 1.$$

Topilgan yechimni t bo'yicha differensiallab, y ga qo'ysak, navbatdagi yechim chiqadi:

$$y = C_1 e^t - C_2 e^{-t} - 1.$$

Demak, sistemaning umumiy yechimi quyidagicha bo'ladi:

$$\begin{cases} x = C_1 e^t + C_2 e^{-t} - 1, \\ y = C_1 e^t - C_2 e^{-t} - 1. \end{cases}$$

Quyidagi differensial tenglamalar sistemasini o'rninga qo'yish ushuli bilan yeching

$$\begin{aligned} 742. \quad & \begin{cases} \frac{dx}{dt} = -9y, \\ \frac{dy}{dt} = x. \end{cases} \end{aligned}$$

$$\begin{aligned} 743. \quad & \begin{cases} \frac{dx}{dt} = x + 5y, \\ \frac{dy}{dt} = -x - 3y, \end{cases} \quad x(0) = -2, \\ & y(0) = 1. \end{aligned}$$

$$\begin{aligned} 744. \quad & \begin{cases} \frac{dx}{dt} = y + t, \\ \frac{dy}{dt} = x - t. \end{cases} \end{aligned}$$

$$\begin{aligned} 745. \quad & \begin{cases} \frac{d^2x}{dt^2} = x^2 + y, \\ \frac{dy}{dt} = -x - 3y, \end{cases} \quad x(0) = x'(0) = 1, \\ & y(0) = 0. \end{aligned}$$

$$\begin{aligned} 746. \quad & \begin{cases} \frac{dx}{dt} = 3 - 2y, \\ \frac{dy}{dt} = 2x - 2t. \end{cases} \end{aligned}$$

$$\begin{aligned} 747. \quad & \begin{cases} \frac{dx}{dt} + 3x + y = 0, \\ \frac{dy}{dt} - x + y = 0. \end{cases} \end{aligned}$$

$$\begin{aligned} 748*. \quad & \begin{cases} \frac{d^2x}{dt^2} + \frac{dy}{dt} + x = 0, \\ \frac{dx}{dt} + \frac{d^2y}{dt^2} = 0. \end{cases} \end{aligned}$$

$$\begin{aligned} 749*. \quad & \begin{cases} \frac{dx}{dt} = 3x - \frac{1}{2}y - 3t^2 - \frac{1}{2}t + \frac{3}{2}, \\ \frac{dy}{dt} = 2y - 2t - 1. \end{cases} \end{aligned}$$

$$\begin{aligned} 750*. \quad & \begin{cases} \frac{dx}{dt} = x - 4y, \\ \frac{dy}{dt} = x + y. \end{cases} \end{aligned}$$

$$\begin{aligned} 751*. \quad & \begin{cases} 4 \frac{dx}{dt} - \frac{dy}{dt} + 3x = \sin t, \\ \frac{dx}{dt} + y = \cos t. \end{cases} \end{aligned}$$

45-§. O'zgarmas koeffitsiyentli chiziqli bir jinsli differensial tenglamalar sistemasini Eyler usulida yechish

Quyidagi bir jinsli chiziqli

$$\begin{cases} \frac{dx}{dt} = ax + by + cz, \\ \frac{dy}{dt} = a_1x + b_1y + c_1z, \\ \frac{dz}{dt} = a_2x + b_2y + c_2z, \end{cases} \quad (82)$$

sistemani qaraymiz va undagi koeffitsiyentlarni o'zgarmas deb hisoblaymiz. (82) sistemaning yechimini ko'rsatkichli funksiyalar ko'rinishida izlaymiz:

$$x = \lambda e^{\mu t}, \quad y = \mu e^{\mu t}, \quad z = \nu e^{\mu t}, \quad (83)$$

bu yerda r , λ , μ , ν o'zgarmas bo'lib, ularni (83) ifodalar (82) tenglamani qanoatlantiradigan qilib aniqlash lozim. (82) ga (83) ni qo'yib, $e^{\mu t}$ ga qisqartirib va λ , μ , ν oldidagi koeffitsiyentlarni tanlab, quyidagi algebraik tenglamalar sistemasini hosil qilamiz:

$$\begin{cases} (a - r)\lambda + b\mu + cv = 0, \\ a_1\lambda + (b_1 - r)\mu + c_1v = 0, \\ a_2\lambda + b_2\mu + (c_2 - r)v = 0. \end{cases} \quad (84)$$

(84) sistema λ , μ , ν larga nisbatan chiziqli bir jinsli tenglamalar sistemasidir.

Bizga ma'lumki bir jinsli sistema noldan farqli yechimga ega bo'lishi uchun sistemaning determinanti nolga teng bo'lishi zarur va yetarli. Shunday qilib,

$$\Delta = \begin{vmatrix} a - r & b & c \\ a_1 & b_1 - r & c_1 \\ a_2 & b_2 & c_2 - r \end{vmatrix} = 0 \quad (85)$$

tenglik bajarilishi kerak. (85) tenglama r ga nisbatan uchinchi darajali tenglama bo'lib, uni (82) sistemaning xarakteristik tenglamasi deyiladi. Quyidagi hollar bo'lishi mumkin:

a) Xarakteristik tenglamaning r_1, r_2, r_3 ildizlari haqiqiy va har xil bo'lsin. Bu ildizlarning har biri uchun mos (84) tenglamlalar sistemasini yozamiz va $\lambda_1, \mu_1, \nu_1; \lambda_2, \mu_2, \nu_2; \lambda_3, \mu_3, \nu_3$ koeffitsiyentlarni aniqlaymiz. Agar (85) tenglamaning r_1, r_2, r_3 ildizlariga mos (84) sistemaning xususiy yechimlarini $x_1, y_1, z_1; x_2, y_2, z_2; x_3, y_3, z_3$ orqali belgilasak, (82) differensial tenglamlalar sistemasining umumiy yechimi quyidagi ko'rinishda bo'ladi:

$$\begin{cases} x(t) = C_1 x_1 + C_2 x_2 + C_3 x_3, \\ y(t) = C_1 y_1 + C_2 y_2 + C_3 y_3, \\ z(t) = C_1 z_1 + C_2 z_2 + C_3 z_3. \end{cases} \quad (86)$$

752. Quyidagi tenglamlalar sistemasini umumiy yechimini toping

$$\begin{cases} \frac{dx}{dt} = 3x - y + z, \\ \frac{dy}{dt} = -x + 5y - z, \\ \frac{dz}{dt} = x - y + 3z. \end{cases}$$

Yechish. Sistemaning xarakteristik tenglamasini tuzamiz:

$$\begin{vmatrix} 3-r & -1 & 1 \\ -1 & 5-r & -1 \\ 1 & -1 & 3-r \end{vmatrix} = 0 \Rightarrow r^3 - 11r^2 + 36r - 36 = 0 \Rightarrow r_1 = 2, r_2 = 3, r_3 = 6.$$

Demak, berilgan sistemaning xususiy yechimlarini

$$\begin{aligned} x_1 &= \lambda_1 e^{2t}, \quad y_1 = \mu_1 e^{2t}, \quad z_1 = \nu_1 e^{2t}, \\ x_2 &= \lambda_2 e^{3t}, \quad y_2 = \mu_2 e^{3t}, \quad z_2 = \nu_2 e^{3t}, \\ x_3 &= \lambda_3 e^{6t}, \quad y_3 = \mu_3 e^{6t}, \quad z_3 = \nu_3 e^{6t}, \end{aligned}$$

ko'rinishda izlaymiz.

$r = 2$ da λ, μ, ν larni aniqlash uchun (84) sistema quyidagicha yoziladi:

$$\begin{cases} (3-2)\lambda_1 - \mu_1 + \nu_1 = 0, \\ -\lambda_1 + (5-2)\mu_1 - \nu_1 = 0, \\ \lambda_1 - \mu_1 + (3-2)\nu_1 = 0, \end{cases} \Rightarrow \begin{cases} \lambda_1 - \mu_1 + \nu_1 = 0, \\ -\lambda_1 + 3\mu_1 - \nu_1 = 0, \\ \lambda_1 - \mu_1 + \nu_1 = 0, \end{cases} \Rightarrow \lambda_1 = 1, \mu_1 = 0, \nu_1 = -1.$$

$r = 3$ uchun (84) sistema quyidagicha yoziladi:

$$\begin{cases} -\mu_2 + \nu_2 = 0, \\ -\lambda_2 + 2\mu_2 - \nu_2 = 0, \Rightarrow \lambda_2 = 1, \mu_2 = 1, \nu_2 = 1. \\ \lambda_2 - \mu_2 = 0, \end{cases}$$

$r=6$ uchun (84) sistema quyidagicha yoziladi:

$$\begin{cases} -3\lambda_3 - \mu_3 + \nu_3 = 0, \\ -\lambda_3 - \mu_3 - \nu_3 = 0, \Rightarrow \lambda_3 = 1, \mu_3 = -2, \nu_3 = 1. \\ \lambda_3 - \mu_3 - 3\nu_3 = 0, \end{cases}$$

Shunday qilib, berilgan sistemaning xususiy yechimlari:

$$x_1 = e^{2t}, \quad y_1 = 0, \quad z_1 = -e^{2t},$$

$$x_2 = e^{3t}, \quad y_2 = e^{3t}, \quad z_2 = e^{3t},$$

$$x_3 = e^{6t}, \quad y_3 = -2e^{6t}, \quad z_2 = e^{6t}.$$

Bu xususiy yechimlar berilgan sistemaning fundamental yechimlar sistemasidir. Demak, sistemaning umumiy yechimi (86) formulaga asosan quyidagicha bo'лади:

$$x(t) = C_1 e^{2t} + C_2 e^{3t} + C_3 e^{6t},$$

$$y(t) = C_2 e^{3t} - 2C_3 e^{6t},$$

$$z(t) = -C_1 e^{2t} + C_2 e^{3t} + C_3 e^{6t}.$$

b) Xarakteristik tenglamaning ildizlari kompleks sonlar bo'lgan holni qaraymiz.

753. Quyidagi tenglamalar sistemasining umumiy yechimini toping.

$$\begin{cases} \frac{dx}{dt} = x - 5y, \\ \frac{dy}{dt} = 2x - y. \end{cases}$$

Yechish. Sistemaning xarakteristik tenglamasini tuzamiz:

$$\begin{vmatrix} 1-r & -5 \\ 2 & -1-r \end{vmatrix} = 0 \Rightarrow r^2 + 9 = 0 \Rightarrow r_{1,2} = \pm 3i.$$

(84) formulaga asosan quyidagi sistemaga kelamiz:

$$\begin{cases} (1-r)\lambda - 5\mu = 0, \\ 2\lambda - (1+r)\mu = 0. \end{cases}$$

$r = 3i$ uchun

$$\begin{cases} (1-3i)\lambda_1 + 5\mu_1 = 0, \\ 2\lambda_1 - (1+3i)\mu_1 = 0, \end{cases} \Rightarrow \lambda_1 = 5, \mu_1 = 1-3i.$$

U holda, $x_1 = 5e^{3it}$, $y_1 = (1-3i)e^{3it}$, xususiy yechimlarni topamiz.
 $r = -3i$ uchun

$$\begin{cases} (1+3i)\lambda_1 - 5\mu_1 = 0, \\ 2\lambda_1 - (1-3i)\mu_1 = 0, \end{cases} \Rightarrow \lambda_1 = 5, \mu_1 = 1+3i.$$

U holda, $x_1 = 5e^{-3it}$, $y_1 = (1+3i)e^{-3it}$ xususiy yechimlarni topamiz.
Yangi fundamental yechimlar sistemasiga o'tamiz:

$$\begin{cases} \bar{x}_1 = \frac{x_1 + x_2}{2}, & \bar{x}_2 = \frac{x_1 - x_2}{2}, \\ \bar{y}_1 = \frac{y_1 + y_2}{2}, & \bar{y}_2 = \frac{y_1 - y_2}{2}. \end{cases}$$

Eyler formulasi $e^{\pm\alpha t} = \cos\alpha t \pm i\sin\alpha t$ dan foydalanim, quyidagilarni topamiz:

$$\bar{x}_1 = 5\cos 3t, \bar{x}_2 = 5\sin 3t, \bar{y}_1 = \cos 3t + 3\sin 3t, \bar{y}_2 = \sin 3t - 3\cos 3t.$$

U holda umumiy yechim quyidagi ko'rinishda bo'ldi:

$$x(t) = 5C_1 \cos 3t + 5C_2 \sin 3t,$$

$$y(t) = C_1(\cos 3t + 3\sin 3t) + C_2(\sin 3t - 3\cos 3t).$$

d) Xarakteristik tenglamaning ildizlari karrali bo'lgan holni qaraymiz.

754. Quyidagi tenglamalar sistemasining umumiy yechimini toping.

$$\begin{cases} \frac{dx}{dt} = 2x + y, \\ \frac{dy}{dt} = -x + 4y. \end{cases}$$

Yechish. Sistemaning xarakteristik tenglamarasini tuzamiz:

$$\begin{vmatrix} 2-r & 1 \\ -1 & 4-r \end{vmatrix} = 0 \Rightarrow r^2 - 6r + 9 = 0 \Rightarrow r_1 = r_2 = 3.$$

U holda sistemaning yechimini

$$\begin{cases} x = (\lambda_1 + \mu_1 t)e^{\lambda_1 t}, \\ y = (\lambda_2 + \mu_2 t)e^{\lambda_1 t} \end{cases}$$

ko'rinishda izlash kerak. Yechimni sistemaning birinchi tenglamasiga qo'yib,

$$3(\lambda_1 + \mu_1 t) + \mu_1 = 2(\lambda_1 + \mu_1 t) + (\lambda_2 + \mu_2 t),$$

tenglikka ega bo'lamiz. Tenglikning chap va o'ng tomondagi bir xil darajadagi λ ning koefitsiyentlarini tenglab, quyidagi sistemanı hosil qilamiz:

$$\begin{cases} 3\lambda_1 + \mu_1 = 2\lambda_1 + \lambda_2, \\ 3\mu_1 = 2\mu_1 + \mu_2, \end{cases} \Rightarrow \begin{cases} \lambda_2 = \mu_1 + \lambda_1, \\ \mu_2 = \mu_1. \end{cases}$$

λ_1 va μ_1 sonlarni ixtiyoriy parametr deb qarab, $\lambda_1 = C_1$ va $\mu_1 = C_2$ deb belgilasak, yechim quyidagi ko'rinishda bo'ladi:

$$\begin{cases} x = (C_1 + C_2 t)e^{\lambda_1 t}, \\ y = (C_1 + C_2 + C_3 t)e^{\lambda_1 t}. \end{cases}$$

Quyidagi differensial tenglamalar sistemasini o'rniga qo'yish usuli bilan yeching

$$755. \begin{cases} \frac{dx}{dt} = 8y - x, \\ \frac{dy}{dt} = x + y. \end{cases}$$

$$757. \begin{cases} \frac{dx}{dt} = x + y, \\ \frac{dy}{dt} = 4y - 2x, \end{cases} \quad x(0) = 0, \quad y(0) = 0.$$

$$759. \begin{cases} \frac{dx}{dt} = 5x - y, \\ \frac{dy}{dt} = x + 3y. \end{cases}$$

$$761*. \begin{cases} \frac{dx}{dt} + 2\frac{dy}{dt} = 17x + 8t, \\ 13\frac{dy}{dt} = 53x + 2y, \end{cases} \quad x(0) = 2, \quad y(0) = -1.$$

$$762*. \begin{cases} \frac{dx}{dt} = 6x - 12y - z, \\ \frac{dy}{dt} = x - 3y - z, \\ \frac{dz}{dt} = -4x + 12y + 3z. \end{cases}$$

$$756. \begin{cases} \frac{dx}{dt} = 2x + y, \\ \frac{dy}{dt} = x - 3y. \end{cases}$$

$$758. \begin{cases} \frac{dx}{dt} = 4x - 3y, \\ \frac{dy}{dt} = 3x + 4y. \end{cases}$$

$$760. \begin{cases} \frac{dx}{dt} = x + 5y, \\ \frac{dy}{dt} = -x - 3y, \end{cases} \quad x(0) = -2, \quad y(0) = 1.$$

$$763*. \begin{cases} \frac{dx}{dt} = x - z, \\ \frac{dy}{dt} = x, \\ \frac{dz}{dt} = x - y. \end{cases}$$

46-§. Differensial tenglamalar sistemasini birinchi integral usulida yechish

Ushbu

$$\frac{dx_i}{dt} = f_i(t, x_1, x_2, \dots, x_n), \quad (i=1, n) \quad (87)$$

differensial tenglamalar sistemasini integrallashning bu usuli quyidagidan iborat: arifmetik amallar (qo'shish, ayrish, ko'paytirish va bo'lish) yordamida (87) tenglamalar sistemasini integrallash uchun qulay

$$F\left(t, U, \frac{dU}{dt}\right) = 0 \quad (88)$$

tenglamaga keltirilib yechim topiladi, bu yerda $U = U(t, x_1, x_2, \dots, x_n)$.

764. Quyidagi tenglamalar sistemasining umumiy yechimini toping

$$\begin{cases} \frac{dx}{dt} = 2(x^2 + y^2)t, \\ \frac{dy}{dt} = 4xyt. \end{cases}$$

Yechish. Sistemaning tenglamalarini hadma-had qo'shib, quyidagi natijaga kelamiz:

$$\frac{d(x+y)}{dt} = 2(x+y)^2 t \Rightarrow \int \frac{d(x+y)}{(x+y)^2} = \int 2tdt \Rightarrow \frac{1}{x+y} + t^2 = C_1.$$

Sistemaning tenglamalarini hadma-had ayirib, quyidagi natijaga kelamiz:

$$\frac{d(x-y)}{dt} = 2(x-y)^2 t \Rightarrow \int \frac{d(x-y)}{(x-y)^2} = \int 2tdt \Rightarrow \frac{1}{x-y} + t^2 = C_2.$$

Shunday qilib sistemaning ikkita **birinchi integralini** topdik.

$$t^2 + \frac{1}{x+y} = C_1, \quad t^2 + \frac{1}{x-y} = C_2. \quad (89)$$

(89) ni x va y noma'lum funksiyalarga nisbatan yechib, (87) sistemaning umumiy yechimini topamiz:

$$x(t) = \frac{C_1 + C_2 - 2t^2}{2(C_1 - t^2)(C_2 - t^2)}, \quad y(t) = \frac{C_2 - C_1}{2(C_1 - t^2)(C_2 - t^2)}.$$

765. Quyidagi tenglamalar sistemasining umumiy yechimini toping

$$\begin{cases} \frac{dx}{dt} = \frac{x-y}{z-t}, \\ \frac{dy}{dt} = \frac{x-y}{z-t}, \\ \frac{dz}{dt} = x-y+1. \end{cases}$$

Yechish. Sistemaning birinchi tenglamarasidan ikkinchi tenglamarasini hadma-had ayirib, quyidagi natijaga kelamiz:

$$\frac{d(x-y)}{dt} = 0 \Rightarrow x-y = C_1. \quad (90)$$

(90) ni ikkinchi va uchinchi tenglamalarga qo'yib, quyidagi sistemaga kelamiz:

$$\begin{cases} \frac{dy}{dt} = \frac{C_1}{z-t}, \\ \frac{dz}{dt} = C_1 + 1. \end{cases}$$

Sistemaning uchinchi teglamarasini integrallab, $z = (C_1 + 1)t + C_2$ ni topamiz va buni birinchi tenglamaga qo'yib, uni integrallab, $y = \ln(C_1 t + C_2) + C_3$, ni topamiz. Shunday qilib berilgan sistemaning umumi yechimi quyidagiga teng:

$$x(t) = \ln|C_1 t + C_2| + C_1 + C_3,$$

$$y(t) = \ln|C_1 t + C_2| + C_3,$$

$$z(t) = (C_1 + 1)t + C_2.$$

766. Quyidagi tenglamalar sistemasining xususiy yechiminin toping

$$\begin{cases} \frac{dx}{dt} = 3x + 5y, & x(0) = 2, \\ \frac{dy}{dt} = -2x - 8y, & y(0) = 5, \end{cases}$$

Yechish. Sistemaning birinchi tenglamarasini 2 ga ko'paytirib, ikkinchi tenglamaga hadma-had qo'shib, quyidagi natijaga kelamiz:

$$\frac{d(2x+y)}{dt} = 2(2x+y) \Rightarrow \int \frac{d(2x+y)}{(2x+y)} = \int 2dt \Rightarrow \ln|2x+y| = 2t + \ln C_1$$

$$\Rightarrow \ln\left|\frac{2x+y}{C_1}\right| = 2t \Rightarrow 2x+y = C_1 e^{2t} \Rightarrow y = C_1 e^{2t} - 2x.$$

Topilgan yechimni sistemaning birinchi tenglamasiga qo'yib, x ga nisbatan chiziqli tenglamaga kelamiz. Chiziqli tenglamaning yechimini topamiz.

$$\frac{dx}{dt} + 7x = 5C_1 e^{2t} \Rightarrow x(t) = C_2 e^{-7t} + \frac{5}{9} C_1 e^{2t}.$$

Shunday qilib, sistemaning umumiy yechimi quyidagicha bo'ladi:

$$\begin{cases} x(t) = C_2 e^{-7t} + \frac{5}{9} C_1 e^{2t}, \\ y(t) = -\frac{1}{9} C_1 e^{2t} - 2C_2 e^{-7t}. \end{cases}$$

Boshlang'ich shartlarni e'tiborga olsak:

$$\begin{cases} C_2 + \frac{5}{9} C_1 = 2, \\ -\frac{1}{9} C_1 - 2C_2 = 5, \end{cases} \Rightarrow C_1 = 9, C_2 = -3.$$

Demak, sistemaning xususiy yechimi quyidagi ko'rinishda bo'ladi:

$$\begin{cases} x(t) = 5e^{2t} - 3e^{-7t}, \\ y(t) = -e^{2t} + 6e^{-7t}. \end{cases}$$

Quyidagi differensial tenglamalar sistemasining yechimini sistemaning birinchi integralini topish usuli bilan toping

$$767. \begin{cases} \frac{dx}{dt} = x^2 + y^2, \\ \frac{dy}{dt} = 2xy. \end{cases}$$

$$768. \begin{cases} \frac{dx}{dt} = \frac{y}{x-y}, \\ \frac{dy}{dt} = \frac{x}{x-y}. \end{cases}$$

$$769. \begin{cases} \frac{dx}{dt} = \sin x \cos y, \\ \frac{dy}{dt} = \cos x \sin y. \end{cases}$$

$$770*. \begin{cases} \frac{dx}{dt} = \cos^2 x \cos^2 y + \sin^2 x \cos^2 y, \\ \frac{dy}{dt} = -\frac{1}{2} \sin 2x \sin 2y, \quad x(0) = y(0) = 0. \end{cases}$$

$$771. \begin{cases} \frac{dx}{dt} = -y, \\ \frac{dy}{dt} = \frac{y^2 - t}{x}, \end{cases} z = t^2 + 2xy, \quad z = x - ty^2 \text{ funksiyalar sistemaning}$$

birinchi integrali bo'la oladimi?

772. $\begin{cases} \frac{dx}{dt} = y^2 - \cos x, \\ \frac{dy}{dt} = -y \sin x, \end{cases} \quad z = 2t \cos x - \ln y, z = 3y \cos x - y^3$ funksiyalar

sistemaning birinchi integrali bo'la oladimi?

47-§. O'zgarmas koeffitsiyentli chiziqli bir jinsli bo'lmagan differensial tenglamalar sistemasini integrallash usuli

1. O'zgarmasni variatsiyalash usuli. Ushbu sistema berilgan bo'lsin:

$$\begin{cases} x' + a_1x + b_1y + c_1z = f_1(t), \\ y' + a_2x + b_2y + c_2z = f_2(t), \\ z' + a_3x + b_3y + c_3z = f_3(t). \end{cases} \quad (91)$$

Bunda $f_i(t)$ ($i=1,2,3$), t – o'zgaruvchining ma'lum uzluksiz funksiyasi.

Faraz qilaylik:

$$\begin{cases} x = C_1x_1 + C_2x_2 + C_3x_3, \\ y = C_1y_1 + C_2y_2 + C_3y_3, \\ z = C_1z_1 + C_2z_2 + C_3z_3, \end{cases} \quad (92)$$

funksiyalar (91) sistemaga mos bir jinsli sistemaning umumiyl yechimi bo'lsin. U holda (91) sistemaning yechimini

$$\begin{cases} x = C_1(t)x_1 + C_2(t)x_2 + C_3(t)x_3, \\ y = C_1(t)y_1 + C_2(t)y_2 + C_3(t)y_3, \\ z = C_1(t)z_1 + C_2(t)z_2 + C_3(t)z_3, \end{cases} \quad (93)$$

ko'rinishda izlaymiz, bu yerda $C_1(t)$, $C_2(t)$, $C_3(t)$ – noma'lum funksiyalar.

(93) ifodani (91) sistemaga qo'ysak, sistemaning birinchi tenglamasi quyidagi ko'rinishga keladi:

$$C'_1x_1 + C'_2x_2 + C'_3x_3 + C_1\left(x'_1 + a_1x_1 + b_1y_1 + c_1z_1\right) + \\ + C_2\left(x'_2 + a_2x_2 + b_2y_2 + c_2z_2\right) + C_3\left(x'_3 + a_3x_3 + b_3y_3 + c_3z_3\right) = f_1(t).$$

Bunda (93) ga asosan barcha qavslar nolga teng, demak,

$$C'_1x_1 + C'_2x_2 + C'_3x_3 = f_1(t). \quad (94)$$

Xuddi shuningdek, (91) sistemaning ikkinchi va uchinchi tenglamalaridan (94) kabi natija kelib chiqadi, ular birgalikda

$$\begin{cases} C_1' x_1 + C_2' x_2 + C_3' x_3 = f_1(t), \\ C_1' y_1 + C_2' y_2 + C_3' y_3 = f_2(t), \\ C_1' z_1 + C_2' z_2 + C_3' z_3 = f_3(t), \end{cases} \quad (95)$$

tenglamalar sistemasini hosil qiladi.

C_1' , C_2' , C_3' larga nisbatan chiziqli bo'lgan (95) sistema yechimiga ega, chunki determinanti Vronskiy determinant bo'lib, u noldan farqli, ya'ni

$$\Delta = \begin{vmatrix} x_1 & x_2 & x_3 \\ y_1 & y_2 & y_3 \\ z_1 & z_2 & z_3 \end{vmatrix} \neq 0.$$

(95) sistemadan C_1' , C_2' , C_3' larni topib, so'ng integrallab C_1 , C_2 , C_3 larni topamiz, shu bilan birga (91) sistemaning (92) ko'rinishdagi yechimi topiladi.

773. Quyidagi tenglamalar sistemasini xususiy yechimini toping.

$$\begin{cases} \frac{dx}{dt} + 2x + 4y = 1 + 4t, \\ \frac{dy}{dt} + x - y = \frac{3}{2}t^2. \end{cases} \quad (96)$$

Yechish. (96) sistemani yechish uchun, avvalo, bir jinsli

$$\begin{cases} \frac{dx}{dt} + 2x + 4y = 0, \\ \frac{dy}{dt} + x - y = 0. \end{cases}$$

sistemaning umumiy yechimini topamiz. Bu sistemani o'tniga qo'yish usuli bilan yechamiz. Ikkinchi tenglamadan $x = y - \frac{dy}{dt}$ ni topib, differensiallab, birinchi tenglamaga qo'ysak, quyidagi tenglama kelib chiqadi:

$$\frac{d^2y}{dt^2} + \frac{dy}{dt} - 6y = 0.$$

Bu tenglananing umumiy yechimi

$$y = C_1 e^{2t} + C_2 e^{-3t} \Rightarrow x = y - \frac{dy}{dt} = -C_1 e^{2t} + 4C_2 e^{-3t}.$$

Demak, bir jinsli sistemaning umumiy yechimi

$$\begin{cases} x = -C_1 e^{2t} + 4C_2 e^{-3t}, \\ y = C_1 e^{2t} + C_2 e^{-3t}, \end{cases}$$

ko'rinishda bo'ladi. Bir jinsli bo'lmagan (96) sistemani yechimini, quyidagi ko'rinishda qidiramiz:

$$\begin{cases} x = -C_1(t) e^{2t} + 4C_2(t) e^{-3t}, \\ y = C_1(t) e^{2t} + C_2(t) e^{-3t}. \end{cases} \quad (97)$$

(97) yechimni (96) sistemaga qo'yib, elementar almashtirishlardan so'ng quyidagi chiziqli tenglamalar sistemasiga kelamiz:

$$\begin{cases} -C_1'(t) e^{2t} + 4C_2'(t) e^{-3t} = 1 + 4t, \\ C_1'(t) e^{2t} + C_2'(t) e^{-3t} = \frac{3}{2} t^2. \end{cases}$$

Bundan

$$C_1'(t) = \frac{(6t^2 - 4t - 1)e^{-2t}}{5}, \quad C_2'(t) = \frac{(3t^2 + 8t + 2)e^{3t}}{10}$$

ekani kelib chiqadi. Bu ifodalarni integrallaymiz.

$$C_1(t) = -\frac{1}{5}(t + 3t^2)e^{-2t} + C_3, \quad C_2(t) = \frac{1}{10}(2t + t^2)e^{3t} + C_4,$$

bu yerda C_3, C_4 ixtiyoriy o'zgarmaslar. Topilgan natijani (97) ga qo'yib, (96) sistemani yechimini hosil qilamiz:

$$x(t) = -C_1 e^{2t} + 4C_2 e^{-3t} + t + t^2,$$

$$y(t) = C_1 e^{2t} + C_2 e^{-3t} - \frac{1}{2}t^2.$$

2. Aniqmas koeffitsiyentlar usuli. Agar o'zgarmas koeffitsiyentli chiziqli bir jinsli bo'lmagan differensial tenglamalar sistemasining o'ng tomonidagi $f_i(t)$ funksiya $P_k(t)$ – ko'phad, $e^{\alpha t}$ – ko'rsatkichli funksiya, $\sin \beta t$, $\cos \beta t$ – trigonometrik funksiyalardan iborat bo'lsa, sistemaning xususiy yechimini aniqmas koeffitsiyentlar usuli bilan topish maqsadga muvosiqdir.

774. Quyidagi tenglamalar sistemasining umumiy yechimini toping.

$$\begin{cases} \frac{dx}{dt} = x + 2y, \\ \frac{dy}{dt} = x - 5 \sin t. \end{cases}$$

Yechish. Sistemani yechish uchun, avvalo, bir jinsli

$$\begin{cases} \frac{dx}{dt} = x + 2y, \\ \frac{dy}{dt} = x, \end{cases}$$

sistemaning birinchi tenglamasini har ikki tomonini \cdot bo'yicha differensiallab, $\frac{dy}{dt}$ ni x bilan almashtirib, quyidagi tenglamani hosil qilamiz:

$$\frac{d^2x}{dt^2} - \frac{dx}{dt} - 2x = 0.$$

Bu tenglamaning yechimi $\bar{x} = C_1 e^{-t} + C_2 e^{2t}$.

Sistemaning ikkinchi tenglamasini e'tiborga olsak, tenglamanning ko'rinishi

$$\frac{d^2x}{dt^2} - \frac{dx}{dt} - 2x = 10 \sin t$$

dan iborat bo'ladi. Bu bir jinsli bo'lmagan tenglamaning xususiy yechimini

$$f(t) = 10 \sin t = e^{\alpha t} 10 \sin t, \alpha = 0, \beta = 1,$$

$$\dot{x} = A \cos t + B \sin t$$

ko'rinishda axtaramiz.

Hosilalarni topib, bir jinsli bo'lmagan tenglamaga qo'ysak, quyidagi tenglik hosil bo'ladi.

$$(3A + B) \cos t + (A + B) \sin t = 10 \sin t.$$

Koeffitsiyentlarni tenglab, sistemani yechamiz.

$$\begin{cases} 3A + B = 0, \\ A + B = 10, \end{cases} \Rightarrow A = -5, B = 15.$$

Demak, xususiy yechim

$$\dot{x} = -5 \cos t + 10 \sin t.$$

Umumiy yechim esa

$$x = \bar{x} + \dot{x} = C_1 e^{-t} + C_2 e^{2t} - 5 \cos t + 10 \sin t.$$

Umumiy yechimni va uning $\frac{dx}{dt}$ hosilasini sistemaning birinchi tenglamasiga qo'yib,

$$y = -C_1 e^{-t} + \frac{1}{2} C_2 e^{2t} + \frac{15}{2} \cos t - \frac{5}{2} \sin t$$

ni topamiz. Demak, berilgan sistemaning umumiy yechimi quyidagi ko'rnishda bo'ladi:

$$\begin{cases} x = C_1 e^{-t} + C_2 e^{2t} - 5 \cos t + 10 \sin t, \\ y = -C_1 e^{-t} + \frac{1}{2} C_2 e^{2t} - \frac{15}{2} \cos t - \frac{5}{2} \sin t. \end{cases}$$

3. Birinchi integralni topish usuli (Dalamber usuli).

Bizga

$$\begin{cases} \frac{dx}{dt} = a_1 x + b_1 y + f_1(t), \\ \frac{dy}{dt} = a_2 x + b_2 y + f_2(t), \end{cases} \quad (98)$$

sistema berilgan bo'lsin. Sistemaning ikkinchi tenglamasini λ songa ko'paytirib, birinchi tenglamaga hadma-had qo'shamiz:

$$\frac{d(x + \lambda y)}{dt} = (a_1 + \lambda a_2)x + (b_1 + \lambda b_2)y + f_1(t) + \lambda f_2(t). \quad (99)$$

(99) ni quyidagi ko'rnishda yozib olamiz:

$$\frac{d(x + \lambda y)}{dt} = (a_1 + \lambda a_2) \left(x + \frac{b_1 + \lambda b_2}{a_1 + \lambda a_2} y \right) + f_1(t) + \lambda f_2(t). \quad (100)$$

λ ni shunday tanlaymizki, u

$$\frac{b_1 + \lambda b_2}{a_1 + \lambda a_2} = \lambda \quad (101)$$

bo'lsin. U holda (100) tenglama $(x + \lambda y)$ ga nisbatan chiziqli tenglama ko'rnishga keladi:

$$\frac{d(x + \lambda y)}{dt} = (a_1 + \lambda a_2)(x + \lambda y) + f_1(t) + \lambda f_2(t).$$

Bu tenglamani integrallab, quyidagini topamiz:

$$x + \lambda y = e^{(a_1 + \lambda a_2)t} \left\{ C + \int [f_1(t) + \lambda f_2(t)] e^{-(a_1 + \lambda a_2)t} dt \right\}. \quad (102)$$

Agar (101) tenglama ikkita har xil $\lambda_i \neq \lambda$, ildizga ega bo'lsa, u holda (102) dan (98) sistemaning ikkita birinchi integrali topiladi. Demak, yechim to'la topilgan bo'ladi.

775. Quyidagi tenglamalar sistemasini Dalamber usuli bilan yeching.

$$\begin{cases} \frac{dx}{dt} = 5x + 4y + e^t, \\ \frac{dy}{dt} = 4x + 5y + 1. \end{cases}$$

Yechish. Bu sistemada

$$a_1 = 5, b_1 = 4, a_2 = 4, b_2 = 5, f_1(t) = e^t, f_2(t) = 1.$$

λ ni topamiz:

$$\frac{4+5\lambda}{5+4\lambda} = \lambda \Rightarrow 4+5\lambda = \lambda(5+4\lambda) \Rightarrow 4\lambda^2 = 4, \lambda_1 = -1, \lambda_2 = 1.$$

U holda $\lambda_1 = 1$ uchun:

$$x + y = e^t \left[C_1 + \int (e^{-8t} + e^{-9t}) dt \right] = C_1 e^{9t} - \frac{1}{8} e^t - \frac{1}{9}.$$

$\lambda_1 = -1$ uchun:

$$x - y = e^t \left[C_2 + \int (1 - e^{-t}) dt \right] = C_2 e^t + te^t + 1.$$

Shunday qilib, berilgan sistemaning bog'liqmas ikkita birinchi integrali, quyidagi ko'rinishda bo'ladi:

$$\left(x + y + \frac{1}{8} e^t + \frac{1}{9} \right) e^{-9t} = C_1, \quad (x - y - te^t - 1) e^{-t} = C_2.$$

Quyidagi differential tenglamalar sistemasining yechimini o'zgarmasni variatsiyalash usuli bilan toping

$$776. \begin{cases} \frac{dx}{dt} + 2x - y = -e^{2t}, \\ \frac{dy}{dt} + 3x - 2y = 6e^{2t}. \end{cases}$$

$$778. \begin{cases} \frac{dx}{dt} - y = \cos t, \\ \frac{dy}{dt} = 1 - x. \end{cases}$$

$$780. \begin{cases} \frac{dx}{dt} = 2x - y, \\ \frac{dy}{dt} = 2y - x - 5e^t \sin t. \end{cases}$$

$$777. \begin{cases} \frac{dx}{dt} = x + y - \cos t, \\ \frac{dy}{dt} = -y - 2x + \cos t + \sin t. \end{cases}$$

$$779. \begin{cases} \frac{dx}{dt} + y = \cos t, \\ \frac{dy}{dt} + x = \sin t. \end{cases}$$

$$781. \begin{cases} \frac{dx}{dt} = 2x + y - 2z - t + 2, \\ \frac{dy}{dt} = -x + t, \\ \frac{dz}{dt} = x + y - z - t + 1. \end{cases}$$

Quyidagi differential tenglamalar sistemasining yechimini aniqmas koeffitsiyentlar usuli bilan toping

$$782. \begin{cases} \frac{dx}{dt} = 3 - 2y, \\ \frac{dy}{dt} = 2x - 2t. \end{cases}$$

$$783. \begin{cases} \frac{dx}{dt} = -y + \sin t, \\ \frac{dy}{dt} = x + \cos t. \end{cases}$$

$$784. \begin{cases} \frac{dx}{dt} = 4x - 5y + 4t - 1, & x(0) = 0, \\ \frac{dy}{dt} = x - 2y + 1, & y(0) = 0. \end{cases}$$

$$786. \begin{cases} \frac{dx}{dt} = x + y + 1, & x(0) = -\frac{7}{9}, \\ \frac{dy}{dt} = x - 2y + 2t, & y(0) = -\frac{5}{9}. \end{cases}$$

$$785. \begin{cases} \frac{dx}{dt} + \frac{dy}{dt} + y = e^t, \\ 2\frac{dx}{dt} + \frac{dy}{dt} + 2y = \sin t. \end{cases}$$

$$787. \begin{cases} \frac{dx}{dt} = x \cos t, \\ 2\frac{dy}{dt} = (e^t + e^{-t})y. \end{cases}$$

Quyidagi differensial tenglamalar sistemasining yechimini aniqmas koeffitsiyentlar usuli bilan toping

$$788. \begin{cases} \frac{dx}{dt} = 5x + 4y, \\ \frac{dy}{dt} = x + 2y. \end{cases}$$

$$790. \begin{cases} \frac{dx}{dt} = 2x - 4y + 1, \\ \frac{dy}{dt} = -x + 5y. \end{cases}$$

$$792. \begin{cases} \frac{dx}{dt} = 3x + y + e^t, \\ \frac{dy}{dt} = x + 3y + e^t. \end{cases}$$

$$789. \begin{cases} \frac{dx}{dt} = 6x + y, \\ \frac{dy}{dt} = 4x + 3y. \end{cases}$$

$$791*. \begin{cases} \frac{dx}{dt} = 2x + 4y + \cos t, \\ \frac{dy}{dt} = x - 2y + \sin t. \end{cases}$$

$$793. \begin{cases} \frac{dx}{dt} = x + 5y, & x(0) = -2, \\ \frac{dy}{dt} = -3y - x, & y(0) = 1. \end{cases}$$

VI BOB. KOMPLEKS O'ZGARUVCHILI FUNKSIYALAR

48-§. Kompleks sonning algebraik shakli va ular ustida amallar

Fan va amaliyotning rivojlanishi haqiqiy sonlar to'plamining yetarli emasligini ko'rsatdi. Masalan, tashqi ko'rinishi juda sodda $x^2 + 1 = 0$, $x^2 - 4x + 5 = 0$ tenglamalar haqiqiy sonlar to'plamida yechimiga ega emas. Demak, istalgan algebraik tenglamani yechish uchun haqiqiy sonlar to'plami yetarli bo'lmay qoladi.

Bundan tashqari, elektronikada va fizikaning turli bo'limlarda murakkab tabiatli kattaliklar qaraladiki, ularni haqiqiy sonlar tushunchasi qamray olmaydi. Shu sababli, sonlar tushunchasini kengaytirish ehtiyoji yuzaga keldi.

Ta'rif. x va y haqiqiy sonlar, esa ($i^2 = -1$) bo'lgan mavhum birlik,

$$z = x + iy \quad (1)$$

ifodaga kompleks son (algebraik shakli) deyiladi, kompleks son uchun quyidagi tengliklar o'rinni:

$$1) x + i0 = x, \quad 0 + iy = iy \quad \text{va} \quad 1 \cdot i = i, \quad -1 \cdot i = -i;$$

2) faqat $x_1 = x_2, y_1 = y_2$ bo'lgandagina, $z_1 = x_1 + iy_1, z_2 = x_2 + iy_2 \Rightarrow z_1 = z_2$ bo'ladi.

$z = x + iy$ kompleks sonda $x = 0, y \neq 0$ bo'lsa, u mavhum son deyiladi. i son mavhum birlik deyiladi. Sonning haqiqiy va mavhum qismlari $x = \operatorname{Re} z, y = \operatorname{Im} z$ ko'rinishda belgilanadi. $y = 0$ bo'lsa, $z = x$ haqiqiy son, agar $x = 0$ bo'lsa, $z = iy$ sof mavhum son bo'ladi. Mavhum qismlarining ishorasi bilangina farq qiluvchi $z = x + iy$ va $\bar{z} = x - iy$ kompleks sonlar qo'shma kompleks sonlar deyiladi.

Agar $z_1 = x_1 + iy_1$ va $z_2 = x_2 + iy_2$ ikkita kompleks son berilgan bo'lsa, ular ustida arifmetik amallar quyidagicha bajariladi:

$$1. z_1 + z_2 = (x_1 + iy_1) + (x_2 + iy_2) = (x_1 + x_2) + i(y_1 + y_2), \quad (2)$$

$$2. z_1 - z_2 = (x_1 + iy_1) - (x_2 + iy_2) = (x_1 - x_2) + i(y_1 - y_2), \quad (3)$$

$$3. z_1 \cdot z_2 = (x_1 + iy_1) \cdot (x_2 + iy_2) = (x_1 x_2 - y_1 y_2) + i(x_1 y_2 + x_2 y_1), \quad (4)$$

$$4. \frac{z_1}{z_2} = \frac{x_1 + iy_1}{x_2 + iy_2} = \frac{(x_1 + iy_1)(x_2 - iy_2)}{(x_2 + iy_2)(x_2 - iy_2)} = \frac{(x_1x_2 + y_1y_2) + i(x_1y_2 - x_2y_1)}{x_2^2 + y_2^2}, \quad (5)$$

Kompleks sonlarni darajaga ko'tarish ikkihadni darajaga ko'tarish kabi bajariladi, i mavhum birlik uchun quyidagi tengliklar o'rini:

$$i^2 = -1, \quad i^3 = -i, \quad i^4 = 1 \text{ va h.k.}$$

Umuman,

$$i^{4k} = 1, \quad i^{4k+1} = i, \quad i^{4k+2} = -1, \quad i^{4k+3} = -i, \dots \quad (6)$$

794. $z_1 = 2+i$ va $z_2 = 3-2i$ sonlarning yig'indisi va ayirmasini toping.

Yechish. (2) va (3) formulalardan foydalanib quyidagilarni topamiz:

$$z_1 + z_2 = (2+i) + (3-2i) = (2+3) + (1-2)i = 5-i,$$

$$z_1 - z_2 = (2+i) - (3-2i) = (2-3) + (1+2)i = -1+3i.$$

795. $z_3 = 2-3i$, $z_4 = 1+2i$ kompleks sonlar berilgan, quyidagi amallarni bajariring: 1) $z_3 \cdot z_4 = ?$, 2) $z_3 \cdot \overline{z_3} = ?$, 3) $\frac{z_3}{z_4} = ?$, 4) $\frac{z_4}{z_3} = ?$.

Yechish. (4) va (5) formulalarga asosan ko'paytirish va bo'lish amallarini bajaramiz.

$$1) z_3 \cdot z_4 = (2-3i) \cdot (1+2i) = (2 - (-3) \cdot 2) + (4 + (-3) \cdot 1)i = (2+6) + (4-3)i = 8+i,$$

$$2) z_3 \cdot \overline{z_3} = (2-3i) \cdot (2+3i) = (2)^2 - (3i)^2 = 4 - (-9) = 4+9=13,$$

$$3) \frac{z_3}{z_4} = \frac{2-3i}{1+2i} = \frac{(2-3i)(1-2i)}{(1+2i)(1-2i)} = \frac{2-3i-4i+6i^2}{1^2-(2i)^2} = \frac{-4-7i}{5} = -\frac{4}{5}-\frac{7}{5}i,$$

$$4) \frac{z_4}{z_3} = \frac{1+2i}{2-3i} = \frac{(1+2i)(2+3i)}{(2-3i)(2+3i)} = \frac{2+3i+4i+6i^2}{2^2-(3i)^2} = \frac{-4+7i}{13} = -\frac{4}{13}+\frac{7}{13}i.$$

Quyidagilarni hisoblang

796. Agar $z_1 = 1-i$, $z_2 = 3+4i$ bo'lsa:

$$1) z_1 + z_2 = ?, \quad 2) z_1 - z_2 = ?, \quad 3) z_2 - z_1 = ?, \quad 4) z_2 - \overline{z_1} = ?,$$

797. Agar $z_1 = 1-i$, $z_2 = 3+4i$ bo'lsa:

$$1) z_1 \cdot z_2 = ?, \quad 2) z_1 \cdot \overline{z_1} = ?, \quad 3) \frac{z_1}{z_2} = ?, \quad 4) \frac{z_2}{z_1} = ?,$$

798. Quyidagi amallarni bajaring:

$$1) (2+3i) \cdot (3-2i), \quad 2) (a+bi) \cdot (a-bi), \quad 3) (3-2i)^2,$$

$$4) (1+i)^3, \quad 5) \frac{1+i}{1-i}, \quad 6) \frac{2i}{1+i}.$$

799. Hisoblang:

$$\begin{aligned} 1) \frac{2-3i}{1+2i} + (1-i)^2(1+i), & \quad 2) \frac{1+3i}{-2+i} \cdot (-2i) + 1, \\ 3) (2+3i)^3 - (2-3i)^3, & \quad 4) (-1+2i)^4 - (1+2i)^4. \end{aligned}$$

49-§. Kompleks sonning trigonometrik shakli va ular ustida amallar

Har bir $z = x + iy$ kompleks son geometrik jihatdan Oxy koordinatalar tekisligining $N(x, y)$ nuqta yoki \overline{ON} vektori bilan tasvirlanadi. Kompleks son tasvirlanadigan Oxy tekislik kompleks tekislik deyiladi.

z kompleks soniga mos keluvchi N nuqtaning holatini r va φ qutb koordinatalari bilan ham aniqlash mumkin. Bunda koordinatalar boshidan N nuqtagacha bo'lgan masofaga, $z = |\overline{ON}|$ soni kompleks sonning moduli deyiladi va $|z|$ bilan belgilanadi. \overline{ON} vektoring Ox o'qining musbat yo'nalishi bilan hosil qilgan φ burchak kompleks sonning argumenti deyiladi va $\varphi = \operatorname{arctg} \frac{y}{x}$ kabi belgilanadi.

$z = x + iy$ kompleks son uchun quyidagi formula o'rinnlidir:

$$x = r \cos \varphi, \quad y = r \sin \varphi, \quad r = \sqrt{x^2 + y^2}, \quad \operatorname{tg} \varphi = \frac{y}{x}, \quad (7)$$

bunda $\varphi = \arg z$ ning qiymati $0 \leq \arg z < 2\pi$ shartni qanoatlantiradi.

Kompleks sonning $z = x + iy$ ko'rinishdagi ifodasi kompleks sonning algebraik shakli deyiladi.

Kompleks sonning quyidagi ifodasi uning trigonometrik shakli deyiladi:

$$\begin{aligned} z = x + iy &= r \cos \varphi + ir \sin \varphi = r(\cos \varphi + i \sin \varphi), \\ z &= r(\cos \varphi + i \sin \varphi). \end{aligned} \quad (8)$$

Trigonometrik ko'rinishda berilgan kompleks sonlar ustida amallar quyidagicha bajariladi:

$$z_1 = r_1(\cos \varphi_1 + i \sin \varphi_1), \quad z_2 = r_2(\cos \varphi_2 + i \sin \varphi_2) \quad (9)$$

$$z_1 \cdot z_2 = r_1 \cdot r_2 [\cos(\varphi_1 + \varphi_2) + i \sin(\varphi_1 + \varphi_2)], \quad (10)$$

$$\frac{z_1}{z_2} = \frac{r_1}{r_2} [\cos(\varphi_1 - \varphi_2) + i \sin(\varphi_1 - \varphi_2)], \quad (10)$$

$$z^n = r^n (\cos n\varphi + i \sin n\varphi), \quad (11)$$

$$\sqrt[n]{z} = \sqrt[n]{r} \left(\cos \frac{\varphi + 2k\pi}{n} + i \sin \frac{\varphi + 2k\pi}{n} \right), \quad (12)$$

bunda $k = 0, 1, 2, \dots, (n-1)$.

(11) va (12) formulalar Muavr formulalari deyiladi.

Kompleks sonning ko'rsatkichli shakli $z = re^{i\varphi}$ ko'rinishda bo'lib,
 $e^{i\varphi} = \cos \varphi + i \sin \varphi. \quad (13)$

(13) formulaga **Eyler formulasi** deyiladi.

800. $z = -\sqrt{3} + i$ kompleks sonning moduli va argumentini toping, trigonometrik shaklga keltiring va Eyler formulasi orqali ifodalang.

Yechish. $x = -\sqrt{3}, y = 1$ bo'lganligi uchun

$$r = \sqrt{x^2 + y^2} = 2, \quad \operatorname{tg} \varphi = -\frac{1}{\sqrt{3}}$$

tenglamadan: $\varphi = -\frac{\pi}{6} + \pi = \frac{5\pi}{6}$.

$$\text{Shunday qilib, } r = 2, \quad \varphi = \frac{5\pi}{6}.$$

Demak, trigonometrik shakl quyidagi ko'rinishda bo'ladi:

$$z = -\sqrt{3} + i = 2 \left(\cos \frac{5\pi}{6} + i \sin \frac{5\pi}{6} \right) = 2e^{\frac{5\pi}{6}i}.$$

$$\text{801. } z_1 = 2 \left(\cos \frac{\pi}{3} + i \sin \frac{\pi}{3} \right), \quad z_2 = 3 \left(\cos \frac{\pi}{6} + i \sin \frac{\pi}{6} \right) \text{ bo'lsa, } 1) z_1 \cdot z_2,$$

$$2) \frac{z_1}{z_2} \text{ larni toping.}$$

Yechish. 1) (9) formulaga asosan:

$$z_1 \cdot z_2 = 2 \left(\cos \frac{\pi}{3} + i \sin \frac{\pi}{3} \right) \cdot 3 \left(\cos \frac{\pi}{6} + i \sin \frac{\pi}{6} \right) = 6 \left(\cos \frac{\pi}{2} + i \sin \frac{\pi}{2} \right) = 6i.$$

2) (10) formulaga asosan:

$$\frac{z_1}{z_2} = \frac{2 \left(\cos \frac{\pi}{3} + i \sin \frac{\pi}{3} \right)}{3 \left(\cos \frac{\pi}{6} + i \sin \frac{\pi}{6} \right)} = \frac{2}{3} \left(\cos \frac{\pi}{6} + i \sin \frac{\pi}{6} \right) = \frac{\sqrt{3} + i}{3}.$$

802. $z = 1 - i$ sonni sakkizinch darajaga ko'taring.

Yechish. Berilgan sonni trigonometrik shaklda quyidagicha tasvirlaymiz:

$$z = 1 - i = \sqrt{2} \left(\cos \frac{7\pi}{4} + i \sin \frac{7\pi}{4} \right).$$

Muavr formulasiga ko'ra ushbuni hosil qilamiz:

$$z^8 = (1-i)^8 = \left[\sqrt{2} \left(\cos \frac{7\pi}{4} + i \sin \frac{7\pi}{4} \right) \right]^8 = \\ = \left(\sqrt{2} \right)^8 \left[\left(\cos 8 \cdot \frac{7\pi}{4} + i \sin 8 \cdot \frac{7\pi}{4} \right) \right] = 16 (\cos 14\pi + i \sin 14\pi) = 16.$$

803. $\sqrt[4]{-16}$ sonning barcha qiymatlarini toping.

Yechish. Berilgan sonni trigonometrik shaklda quyidagicha tasvirlaymiz:

$$-16 = 16 \cdot (-1) = 16(\cos \pi + i \sin \pi).$$

(12) Muavr formulasiga asosan:

$$\sqrt[4]{-16} = 2\sqrt[4]{-1} = 2\sqrt[4]{\cos \pi + i \sin \pi} = 2 \left(\cos \frac{\pi + 2k\pi}{4} + i \sin \frac{\pi + 2k\pi}{4} \right), \quad k = 0, 1, 2, 3.$$

$$k=0 \Rightarrow 2 \left(\cos \frac{\pi}{4} + i \sin \frac{\pi}{4} \right) = 2 \left(\frac{\sqrt{2}}{2} + i \frac{\sqrt{2}}{2} \right) = \sqrt{2} + \sqrt{2}i,$$

$$k=1 \Rightarrow 2 \left(\cos \frac{\pi + 2\pi}{4} + i \sin \frac{\pi + 2\pi}{4} \right) = 2 \left(\cos \frac{3\pi}{4} + i \sin \frac{3\pi}{4} \right) = -\sqrt{2} + \sqrt{2}i,$$

$$k=2 \Rightarrow 2 \left(\cos \frac{\pi + 4\pi}{4} + i \sin \frac{\pi + 4\pi}{4} \right) = 2 \left(\cos \frac{5\pi}{4} + i \sin \frac{5\pi}{4} \right) = -\sqrt{2} - \sqrt{2}i,$$

$$k=3 \Rightarrow 2 \left(\cos \frac{\pi + 6\pi}{4} + i \sin \frac{\pi + 6\pi}{4} \right) = 2 \left(\cos \frac{7\pi}{4} + i \sin \frac{7\pi}{4} \right) = \sqrt{2} - \sqrt{2}i.$$

Quyidagi larni hisoblang

804. Berilgan kompleks sonlarni trigonometrik shaklga keltiring va Eyler formulasidan ifodalang:

$$1) z = -2 + 2\sqrt{3}i, \quad 2) z = \sqrt{3} - i, \quad 3) z = -\frac{\sqrt{6}}{2} + \frac{\sqrt{6}}{2}i, \quad 4) z = 2 + \sqrt{3}i,$$

$$5) 1 - i, \quad 6) -3 - 2i, \quad 7) z = 1 - \sqrt{3}i, \quad 8) z = -\sqrt{2} - \sqrt{2}i.$$

805. Berilgan kompleks sonlar ustida ko‘paytirish va bo‘lish amalini bajaring, natijani algebraik shaklda ifodalang:

$$1) z_1 = 4 \left(\cos \frac{\pi}{4} + i \sin \frac{\pi}{4} \right), \quad z_2 = 2 \left(\cos \frac{5\pi}{12} + i \sin \frac{5\pi}{12} \right);$$

$$2) z_1 = 6 \left(\cos \frac{5\pi}{6} + i \sin \frac{5\pi}{6} \right), \quad z_2 = \cos \left(-\frac{2\pi}{3} \right) + i \sin \left(-\frac{2\pi}{3} \right);$$

$$3) z_1 = 8 \left(\cos 135^\circ + i \sin 135^\circ \right), \quad z_2 = 2 \left(\cos 45^\circ + i \sin 45^\circ \right);$$

$$4) z_1 = 8 \left(\cos 90^\circ + i \sin 90^\circ \right), \quad z_2 = \cos 30^\circ + i \sin 30^\circ.$$

806. Berilgan kompleks sonlarni darajaga ko‘taring, natijani algebraik shaklda ifodalang:

$$1) \left[\frac{\sqrt{2}}{2} \left(\cos \frac{7\pi}{36} + i \sin \frac{7\pi}{36} \right) \right]^9, \quad 2) \left(\frac{1+i}{1-i} \right)^{10}, \quad 3) (2-2i)^7,$$

$$4) z = 6 \left(\cos \frac{5\pi}{6} + i \sin \frac{5\pi}{6} \right)$$

- 807.** Berilgan kompleks sonlarning barcha ildizlarini toping:
 1) $\sqrt[4]{2-2\sqrt{3}i}$, 2) $\sqrt[4]{-1}$, 3) $\sqrt[4]{-8+8\sqrt{3}i}$, 4) $\sqrt[4]{1+i}$.

50-§. Kompleks o'zgaruvchili funksiyalar va ularning aniqlanish sohasi, limiti va uzlusizligi

Ta'rif: Agar berilgan $z \in \mathbb{Z}$ qiymatga biror qonun yoki qo'da asosida bitta yoki bir nechta $w \in \mathbb{W}$ qiymat mos qo'yilgan bo'lsa, w o'zgaruvchi z o'zgaruvchining funksiyasi deyiladi va $w=f(z)$ ko'rinishida belgilanadi.

Agar $w=f(z)$ funksiyada har bir z ga faqat bitta w mos kelsa bunday funksiya bir qiymatli, har bir z ga bir nechta w mos kelsa ko'p qiymatli funksiya deyiladi.

$w=u(x,y)+v(x,y)i$ funksiyada $u(x,y)$ funksiyaning haqiqiy qismi, $v(x,y)$ esa mavhum qismi bo'ladi.

- 808.** $w=z^2+z$ funksiyaning haqiqiy va mavhum qismlarini toping. 1) $z=1+i$, 2) $z=2-i$, 3) $z=i$, 4) $z=-1$ larni hisoblang.

Yechish. Funksiyaning haqiqiy va mavhum qismlarini aniqlaymiz:

$$\begin{aligned} w &= z^2 + z = (x+yi)^2 + x + yi = x^2 + 2xyi - y^2 + x + yi = \\ &= (x^2 - y^2 + x) + (2xy + y)i, \Rightarrow u(x,y) = x^2 + x - y^2, v(x,y) = 2xy + y. \end{aligned}$$

Funksiyaning qiymatlarini hisoblaymiz:

$$1) w = z^2 + z = (1+i)^2 + 1+i = 1+2i-1+1+i = 1+3i,$$

$$2) w = z^2 + z = (2-i)^2 + 2-i = 4-4i-1+2-i = 5-5i = 5(1-i),$$

$$3) w = z^2 + z = (i)^2 + i = -1+i,$$

$$4) w = z^2 + z = (-1)^2 - 1 = 1-1 = 0.$$

- 809.** $w=f(z)=x^2+y^2i$ berilgan bo'lsa, 1) $f(1+2i)$, 2) $f(-3)$, 3) $f(0)$, 4) $f(-i)$ larni hisoblang.

Yechish. Funksiyaning qiymatlarini hisoblaymiz:

$$\begin{aligned} 1) f(1+2i) &= 1^2 + 2^2 i = 1 + 4i, & 2) f(2-3i) &= 2^2 + (-3)^2 i = 4 + 9i, \\ 3) f(0) &= 0 + 0i = 0, & 4) f(-i) &= 0^2 + (-1)^2 i = i. \end{aligned}$$

Kompleks o'zgaruvchili funksiyalarning limiti va uzluk-sizligi.

1-ta'rif: Kompleks o'zgaruvchili $f(z)$ funksiya berilgan bo'lsin. Agar istalgancha kichik $\varepsilon > 0$ son uchun shunday $\delta(\varepsilon) > 0$ son topish mumkin bo'lsaki, $|z - z_0| < \delta$ tengsizlikni qanoatlantiradigan barcha z lar uchun $|f(z) - A| < \varepsilon$ tengsizlik bajarilsa, A son $f(z)$ funksiyaning z o'zgaruvchi z_0 ga intilgandagi limiti deyiladi va quyidagicha yoziladi.

$$\lim_{z \rightarrow z_0} f(z) = A$$

2-ta'rif: Agar har qanday kichik $\varepsilon > 0$ son uchun shunday $\delta(\varepsilon) > 0$ son topish mumkin bo'lsaki, $|z - z_0| < \delta$ tengsizlikni qanoatlantiradigan barcha z lar uchun

$$|f(z) - f(z_0)| < \varepsilon$$

tengsizlik bajarilsa, ya'ni

$$\lim_{z \rightarrow z_0} f(z) = f(z_0)$$

bo'lsa, u holda $w = f(z)$ funksiya z_0 nuqtada uzliksiz deyiladi.

Kompleks o'zgaruvchili elementar funksiyalar uchun quyidagi formulalar o'rinli

$$1. e^z = 1 + \frac{z}{1!} + \frac{z^2}{2!} + \frac{z^3}{3!} + \dots,$$

$$2. \sin z = \frac{z}{1!} - \frac{z^3}{3!} + \frac{z^5}{5!} - \dots$$

$$3. \cos z = 1 - \frac{z^2}{2!} + \frac{z^4}{4!} - \frac{z^6}{6!} + \dots$$

$$4. \operatorname{sh} z = \frac{e^z - e^{-z}}{2}, \quad \operatorname{ch} z = \frac{e^z + e^{-z}}{2}$$

$$5. e^{iz} = \cos z + i \sin z$$

$$6. \ln z = \ln |z| + (\varphi + 2k\pi)i.$$

810. $w = |z|$ funksiyaning ixtiyoriy z da uzliksiz ekanini ko'rsating.

Yechish. Uchburchak tengsizligiga asosan, quyidagi tengsizlik o'rinli: $\|z - z_0\| \leq |z - z_0|$, $0 < \delta < \varepsilon$ bo'lsin. $|z - z_0| < \delta$ ekanidan $\|z - z_0\| \leq \varepsilon$, bundan esa $\lim_{z \rightarrow z_0} z = z_0$ o'rinli bo'ladi. Shunday qilib $w = |z|$ uzliksiz funksiya.

811. $w=z^2$ funksiyaning ixtiyoriy z da uzlusiz ekani ko'rsating.

Yechish. $|z^2 - z_0^2| = |z - z_0||z + z_0| < |z - z_0|(|z| + |z_0|) < 2M|z - z_0|$, Agar $|z - z_0| < \delta$ tengsizlik bajarilas $|z| < M$, $|z_0| < M_0$ o'srinli bo'ladi. U holda

$$|z^2 - z_0^2| = |z - z_0||z + z_0| < |z - z_0|(|z| + |z_0|) < 2M|z - z_0|$$

$\delta < \frac{\varepsilon}{2M}$ deb tanlasak, $|z - z_0| < \delta$ ga asosan:

$$|z^2 - z_0^2| < 2M\delta < \frac{\varepsilon}{2M} \Rightarrow |z^2 - z_0^2| < \varepsilon$$

uzluksz ekani kelib chiqadi.

812. $\ln(\sqrt{3} + i)$ ni hisoblang.

Yechish. $z = \sqrt{3} + i \Rightarrow x = \sqrt{3}$, $y = 1 \Rightarrow r = 2$, $\varphi = \arctg\left(\frac{1}{\sqrt{3}}\right) = \frac{\pi}{6}$

$$\ln(\sqrt{3} + i) = \ln 2 + \left(\frac{\pi}{6} + 2k\pi\right)i, k \in \mathbb{Z}.$$

813. $\cos\left(\frac{i}{2}\right)$ ni hisoblang.

Yechish. Qatorga yoyilmadan foydalanamiz:

$$\cos z = 1 - \frac{z^2}{2!} + \frac{z^4}{4!} - \frac{z^6}{6!} + \dots$$

Formulaga asosan

$$\cos \frac{i}{2} = 1 - \frac{1}{2!2^2} + \frac{1}{4!2^4} - \frac{1}{6!2^6} - \dots \approx 1,1276.$$

Quyidagi misollarni yeching

814. $w=e^z$ funksiyaning quyidagi qiymatlarini toping:

$$1) z = \frac{\pi}{2}i, 2) z = \pi(1-i), 3) z = 1 + \left(\frac{\pi}{2} + 2k\pi\right)i.$$

815. $f(z) = \frac{1}{x-iy}$ funksiyaning quyidagi qiymatlarini toping:

$$1) f(1+i), 2) f(i), 3) f(3-2i).$$

816. $w=2z^3$ funksiyaning ixtiyoriy z da uzlusiz ekani ko'rsating.

817. $\ln(1-i)$ ni hisoblang.

818. $\sin i \cdot \cosh i = i \cos i \cdot \sinh i$ ayniyatni isbotlang.

819. $\cos z = 2$ tenglamani yeching.

820. $\operatorname{arc} \sin i$ ni hisoblang.

821. $\sin i$ ni qiymatini 0,0001 aniqlikda hisoblang.

822. $\sin\left(\frac{\pi}{6}+i\right)$ ning haqiqiy va mavhum qismlari qiymatini 0,001 aniqlikda hisoblang.

823*. $f(z) = e^z$ funksiyaning quyidagi qiymatlarini toping:

$$1) z = i, \quad 2) z = 1 + \frac{\pi}{2}i.$$

51-§. Kompleks o'zgaruvchili funksiyaning hosilasi

Kompleks o'zgaruvchili funksiyaning hosilasi quyidagi formula bilan topiladi:

$$f'(z) = \lim_{\Delta z \rightarrow 0} \frac{\Delta w}{\Delta z} = \lim_{\Delta z \rightarrow 0} \frac{f(z + \Delta z) - f(z)}{\Delta z}. \quad (14)$$

Kompleks o'zgaruvchili funksiyaning hosilasi mavjud bo'lishi uchun u Koshi-Riman shartlarini bajarishi zarur va yetarli:

$$\frac{\partial u}{\partial x} = \frac{\partial v}{\partial y}, \quad \frac{\partial u}{\partial y} = -\frac{\partial v}{\partial x}. \quad (15)$$

$f(z)$ funksiyaning hosilasi, $u(x, y)$ va $v(x, y)$ ning xususiy hosilalari bilan quyidagicha ifodalanadi:

$$f'(z) = \frac{\partial u}{\partial x} + i \frac{\partial v}{\partial x} = \frac{\partial u}{\partial x} - i \frac{\partial u}{\partial y} = \frac{\partial v}{\partial y} - i \frac{\partial v}{\partial x} = \frac{\partial v}{\partial y} + i \frac{\partial u}{\partial x}. \quad (16)$$

$f(z)$ bir qiymatli funksiya bo'lib, D sohaning har bir nuqtasida differensiallanuvchi bo'lsa, bunday $f(z)$ funksiya D soha **analitik funksiya** deyiladi.

Elementar funksiyalarning hosilalari quyidagi formulalar bilan hisoblanadi:

$$(z^n)' = nz^{n-1}, \quad (e^z)' = e^z, \quad (a^z)' = a^z \ln a, \quad (\sin z)' = \cos z, \quad (\cos z)' = -\sin z,$$

$$(\operatorname{tg} z)' = \frac{1}{\cos^2 z}, \quad (\operatorname{ctg} z)' = -\frac{1}{\sin^2 z}, \quad (\ln z)' = \frac{1}{z}, \quad (\log_a z)' = \frac{1}{z \ln a}.$$

824. Quyidagi funksiya differensiallanuvchimi: $f(z) = y + xi$?

Yechish. $u = y, v = x \Rightarrow \frac{\partial u}{\partial x} = 0, \quad \frac{\partial u}{\partial y} = 1, \quad \frac{\partial v}{\partial x} = 1, \quad \frac{\partial v}{\partial y} = 0.$ Koshi-

Riman sharti bajarilmadi, differensiallanuvchi emas.

825. Quyidagi funksiya differensiallanuvchimi? Agar differensiallanuvchi bo'lsa hosilani toping.

$$f(z) = x^2 - y^2 + 2xyi.$$

Yechish. $u = x^2 - y^2, \quad v = 2xy \Rightarrow \frac{\partial u}{\partial x} = 2x, \quad \frac{\partial u}{\partial y} = -2y, \quad \frac{\partial v}{\partial x} = 2y,$

$\frac{\partial v}{\partial y} = 2x$. Demak, $\frac{\partial u}{\partial x} = \frac{\partial v}{\partial y}, \quad \frac{\partial u}{\partial y} = -\frac{\partial v}{\partial x}$ Koshi-Riman sharti bajarildi, funksiyanig hosilasi mavjud. (16) formula yordamida hosilani topamiz:

$$f'(z) = \frac{\partial u}{\partial x} + i \frac{\partial v}{\partial x} = 2x + 2yi = 2(x + yi) = 2z.$$

Bu natijaga boshqa usul bilan ham kelish mumkin:

$$f(z) = x^2 - y^2 + 2xyi = (x + yi)^2 = z^2 \Rightarrow f'(z) = 2z.$$

826. Quyidagi funksiya differensiallanuvchimi? Agar differensiallanuvchi bo'lsa hosilani toping.

$$f(z) = e^x \cos y + ie^x \sin y.$$

Yechish. $u = e^x \cos y, \quad v = e^x \sin y \Rightarrow \frac{\partial u}{\partial x} = e^x \cos y, \quad \frac{\partial u}{\partial y} = -e^x \sin y,$

$\frac{\partial v}{\partial x} = e^x \sin y, \quad \frac{\partial v}{\partial y} = e^x \cos y$. Demak, $\frac{\partial u}{\partial x} = \frac{\partial v}{\partial y}, \quad \frac{\partial u}{\partial y} = -\frac{\partial v}{\partial x}$ Koshi-Riman sharti bajarildi, funksiyaning hosilasi mavjud, hosilani topamiz:

$$f'(z) = \frac{\partial u}{\partial x} + i \frac{\partial v}{\partial x} = e^x \cos y + ie^x \sin y = e^x (\cos y + i \sin y) = e^x \cdot e^{iy} = e^{x+iy} = e^z.$$

Bu natijaga boshqa usul bilan ham kelish mumkin:

$$f(z) = e^x (\cos y + i \sin y) = e^x \cdot e^{iy} = e^{x+iy} = e^z \Rightarrow f'(z) = (e^z)' = e^z.$$

827. Funksiyaning haqiqiy qismi $u(x, y) = x^2 - y^2 - x$ berilgan, $f(z)$ ni toping.

Yechish. $\frac{\partial u}{\partial x} = 2x - 1$ Koshi-Riman shartiga asosan, $\frac{\partial u}{\partial x} = \frac{\partial v}{\partial y}$

bo'lgani uchun

$$\frac{\partial v}{\partial y} = 2x - 1 \Rightarrow v(x, y) = 2xy - y + \varphi(x), \quad \frac{\partial v}{\partial x} = 2y - \varphi'(x).$$

$$\frac{\partial u}{\partial y} = -2y, \quad \frac{\partial u}{\partial y} = -\frac{\partial v}{\partial x} \Rightarrow -2y = -2y - \varphi'(x) \Rightarrow \varphi'(x) = 0 \Rightarrow \varphi(x) = C.$$

Demak,

$$f(z) = x^2 - y^2 - x + i(2xy - y + C) = x^2 - y^2 + 2xyi - (x + yi) + Ci.$$
$$f(z) = (x + yi)^2 - (x + yi) + Ci = z^2 - z + Ci.$$

828. Funksiyaning mavhum qismi $v(x, y) = x + y$ berilgan, $f(z)$ ni toping.

Yechish. $\frac{\partial v}{\partial y} = 1$, Koshi-Riman shartiga asosan, $\frac{\partial u}{\partial x} = \frac{\partial v}{\partial y}$ bo'lgani uchun

$$\frac{\partial u}{\partial x} = 1, \quad u(x, y) = x + \varphi(y), \quad \frac{\partial u}{\partial y} = \varphi'(y), \quad \frac{\partial v}{\partial x} = 1, \quad \frac{\partial u}{\partial y} = -\frac{\partial v}{\partial x} \Rightarrow$$
$$\Rightarrow \varphi'(y) = -1 \Rightarrow \varphi(y) = -y + C \Rightarrow u(x, y) = x - y + C.$$

Demak,

$$f(z) = x - y + C + i(x + y) = (1 + i)(x + yi) + C, \Rightarrow f(z) = (1 + i)z + C.$$

Quyidagi misollarni yeching

829. $f(z) = x^2 + y^2 - 2xyi$ funksiyani analitiklikka tekshiring.

830. $f(z) = (x^3 - 3xy^2) + i(3x^2y - y^2)$ funksiyani analitiklikka tekshiring, analitik bo'lsa, hosisasini toping.

831. $f(z) = \sin xchy + i \cos xshy$ funksiyani analitiklikka tekshiring, analitik bo'lsa, hosisasini toping.

832. $f(z) = \varphi(y) + i\psi(x)$ funksiya analitik bo'ladigan, $\varphi(y)$ va $\psi(x)$ funksiyalarni aniqlang.

833. $f(z) = y + \lambda xi$ funksiya analitik bo'ladigan λ ni toping.

834. $f(z) = a\bar{z}$, $(\bar{z} = x - iy)$ funksiya analitik bo'ladigan a ni toping.

835. Funksiyaning mavhum qismi $v(x, y) = \sin xshy$ berilgan, $f(z)$ ni toping.

836*. Funksiyaning haqiqiy qismi $u(x, y) = 2^x \cos(y \ln 2)$ berilgan, $f(z)$ ni toping.

52-§. Konform akslantirish

z_0 nuqtada burchakning saqlanishi va cho'zilishni o'zgarmasligi xossalariiga ega bo'lган $w=f(z)$ akslantirishga **konform akslantirish** deyiladi.

Agar konform akslantirishda burchak hisobini yo'nalishi ham o'zgarmasa, bunday akslantirishga I tur konform akslantirish deyiladi.

Agar konform akslantirishda burchak hisobini yo'nalishi qarama qarshisiga o'zgarsa, bunday akslantirishga II tur konform akslantirish deyiladi.

Shunday qilib, agar Z kompleks tekislikning biror z_0 nuqtasida $w=f(z)$ funksiya analitik va $f'(z_0) \neq 0$ bo'lsa, u holda bu nuqtada $w=f(z)$ akslantirish konform bo'ladi.

G sohaning har bir nuqtasida konform bo'lган $w=f(z)$ akslantirish G sohada konform akslantirish deyiladi.

Konform akslantirish uchun quyidagi teorema o'rinnli bo'ladi:

Teorema. Agar $w=f(z)$ funksiya biror z_0 nuqtasida analitik va $f'(z_0) \neq 0$ bo'lsa, u holda $w=f(z)$ funksiya z_0 nuqtada I tur akslantirishni amalga oshiradi. Bunda $\arg[f'(z_0)]$ burish bajariladi $|f'(z_0)|$ esa bu akslantirishda cho'zilish koeffitsiyentini bildaradi.

Ikkinci tur konform akslantirishni, misol uchun, $w=\bar{z}$ (analitik bo'lмаган) funksiya beradi: u D sohani Ox o'qqa nisbatan D sohaga simmetrik bo'lган E sohaga akslantiradi.

Agar $f'(z_0)=0$ bo'lsa, umuman olganda z_0 nuqtada konform bo'lmaydi.

Masalan, $w=z^2$ akslantirish koordinatalar boshida nurlar orasidagi burchakni ikki marta oshiradi.

837. $w=\frac{1}{z}$ funksiya yordamida quyidagi nuqtalarni Ouv tekislikka akslantiring: 1) $(1; i)$, 2) $(0; -2)$, 3) $(2; 0)$.

Yechish. 1) $(1; i) \Rightarrow z = 1 + i \Rightarrow w = \frac{1}{z} = \frac{1}{x+iy} = \frac{1}{1+i} = \frac{1-i}{2} = \frac{1}{2} - \frac{1}{2}i$.
 Ouv tekislikda quyidagi nuqta hosil bo'adi: $(1/2; -1/2)$.

2) $(0; -2) \Rightarrow z = 0 - 2i \Rightarrow w = \frac{1}{z} = \frac{1}{x+iy} = \frac{1}{-2i} = \frac{2i}{4} = 0 + \frac{1}{2}i$. Ovv teklislikda quyidagi nuqta hosil bo'ladi: $(0; 1/2)$.

3) $(2; 0) \Rightarrow z = 2 + 0i \Rightarrow w = \frac{1}{z} = \frac{1}{x+iy} = \frac{1}{2} + 0i$. Ovv teklislikda quyidagi nuqta hosil bo'ladi: $(1/2; 0)$.

838. $w = z^3$ funksiya yordamida Ovv teklislikka $y = x$ chiziqni akslantiring.

Yechish.

$$w = z^3 = (x + yi)^3 = x^3 + 3x^2yi - 3xy^2 - y^3i = (x^3 - 3xy^2) + (3x^2y - y^3)i.$$

Shunday qilib:

$$u = (x^3 - 3xy^2), v = (3x^2y - y^3). |y = x| \Rightarrow u = -2x^3, v = 2x^3 \Rightarrow u = -v.$$

Bundan, Oxy sistemane I va III chorak bissektrissalari Ovv teklislikning II va IV chorak bissektrissalariga o'tar ekan.

839. $w = z^2$ parabola z kvadratdan iborat bo'lib $0 \leq x, y \leq 1$ oraliqda o'zgarsa w qanday sohadan iborat bo'ladi?

$$\text{Yechish. } w = z^2 = (x + yi)^2 = x^2 + 2xyi - y^2 = (x^2 - y^2) + (2xy)i.$$

$$\text{Shunday qilib: } u = (x^2 - y^2), v = 2xy.$$

Kvadratning uchlarini koordinatalarini topamiz:

$$(0;0) \Rightarrow (0;0), (0;1) \Rightarrow (-1;0), (1;0) \Rightarrow (1;0), (1;1) \Rightarrow (0;2).$$

Tomonlarni tasvirlarini aniqlaymiz:

$$OB: y = 0 \Rightarrow u = x^2, v = 0;$$

$$OA: x = 0 \Rightarrow u = -y^2, v = 0;$$

$$AC: y = 1 \Rightarrow u = x^2 - 1, v = 2x \Rightarrow u = \frac{1}{4}v^2 - 1;$$

$$BC: x = 1 \Rightarrow u = 1 - y^2, v = 2y \Rightarrow u = 1 - \frac{1}{4}v^2.$$

Demak, Oxy teklislikdagi kvadrat Ovv teklislikning $v = 0$, $u = \frac{1}{4}v^2 - 1$, $u = 1 - \frac{1}{4}v^2$ chiziqlar bilan chegaralangan uchburchakka akslantirar ekan.

840. Oxy teklislikda $x^2 + y^2 = 1$ formula bilan berilgan aylanani $w = 2z + 1$ formula bilan berilgan funksiya Ovv teklislikda qanday figuraga o'tkazadi?

Yechish.

$$w = 2z + 1 = 2(x + yi) + 1 = (2x + 1) + 2yi \Rightarrow u = 2x + 1, v = 2y \Rightarrow \\ \Rightarrow x = \frac{u - 1}{2}, y = \frac{v}{2} \Rightarrow (u - 1)^2 + v^2 = 4 \Rightarrow O_1(1; 0), r_1 = 2,$$

aylanaga o'tar ekan.

841. $w = \frac{(z+i)^2}{z-i}$ funksiya yordamida bajarilgan akslantirish natijasida $z_0 = -2i$ nuqtadagi hosil bo'ladigan burilish burchagini va qisilish koefitsiyentini aniqlang.

Yechish. $w = f(z)$ funksiya yordamida bajarilgan akslantirishda burish burchagi $\alpha = \arg w'(z)$ formula bilan, z_0 nuqtadagi qisilish koefitsiyenti esa $k = |w'(z)|$ formula bilan topiladi:

$$w' = \frac{2(z+i)(z-i) - (z+i)^2}{(z-i)^2} = \frac{4 + (z-i)^2}{(z-i)^2}, z_0 = -2i, \\ \alpha = \arg \left[\frac{4 + (z-i)^2}{(z-i)^2} \right] = \arg \left[\frac{4 + (-2i-i)^2}{(-2i-i)^2} \right] = \arg \left(\frac{5}{9} \right) = 0, \\ k = \left| \frac{4 + (-2i-i)^2}{(-2i-i)^2} \right| = \frac{5}{9} < 1,$$

qisilish hosil bo'ladi. Demak, burilish hosil bo'lmaydi va qisiladi.

842. $w = \frac{1+zi}{1-zi}$ funksiya yordamida bajarilgan akslantirish bajarilganda, burish burchagi $\alpha = 0$ bo'ladi, qanday nuqtalarda qisilish koefitsiyenti $k = 1$ ga teng bo'ladi?

Yechish. $w = f(z)$ funksiya yordamida bajarilgan akslantirish konform akslantirish bo'ladi, chunki, faqat konform akslantirish-dagina burish burchagi va qisilish koefitsiyenti to'g'risida fikr yuritish mumkin. Ularни hisoblaymiz:

$$w' = \left(\frac{1+zi}{1-zi} \right)' = \frac{i(1-zi) + i(1+zi)}{(1-zi)^2} = \frac{2i}{(1-zi)^2} = \frac{-2i}{(z+i)^2}.$$

$w'(z) \neq 0$ bo'lishi kerak, $z \neq -i$ da $\operatorname{Im} w'(z) = 0$ ni hisoblaymiz:

$$\alpha = \arg w'(z) = \arg \left[\frac{-2i}{(z+i)^2} \right] = \arg \frac{-4x(y+1) - 2i[x^2 - (y+1)^2]}{[x^2 + (y+1)^2]}.$$

$w'(z)$ son haqiqiy bo'ladi, agarda $\operatorname{Im} w'(z) = 0$ bo'lsa, musbat bo'ladi agar $\operatorname{Re} w'(z) > 0$ bo'lsa,

$$\begin{cases} (y+1)^2 = x^2 \Rightarrow \operatorname{Im} w'(z) = 0, \\ x(y+1) < 0 \Rightarrow \operatorname{Re} w'(z) > 0. \end{cases}$$

Bundan $y = -x - 1$, $x \neq 0$ son haqiqiy bo'ladi, agarda, $\operatorname{Im} w'(z) = 0$ bo'lsa, burish burchagi $\alpha = 0$ bo'ladi.

Qisilish koefitsiyenti esa $k = 1$ bo'ladi, agarda,

$$|w'(z)| = 1 \Rightarrow \left| \frac{-2i}{(z+i)^2} \right| = 1 \Rightarrow |(z+i)^2| = 2 \Rightarrow |z+i| = \sqrt{2}.$$

Bu esa markazi $z = -i$ va radiusi $\sqrt{2}$ teng bo'lgan aylanadan iborat.

Quyidagi misollarni yeching

843. $w = z^2$ funksiya yordamida Ouv tekislikka $x = 2$, $y = 1$ chiziqlarni akslantiring.

844. $w = -z^2$ funksiya yordamida Ouv tekislikka $x + y = 1$ chiziqni akslantiring.

845. $w = iz + 1$ funksiya yordamida Ouv tekislikka Ox , Oy o'qlarni akslantiring.

846. Oxy tekislikdagi $y = x^2$ formula bilan berilgan parabolani $w = z^2$ formula bilan berilgan funksiya Ouv tekislikda qanday figuraga o'tkazadi?

$w = f(z)$ funksiya yordamida akslantirish bajarilganda, burish burchagini va qisilish koefitsiyentini z_0 nuqtada toping.

847. $w = z^3$, $z_0 = 1 - i$.

848. $w = \frac{1}{z}$, $z_0 = 2i$.

149*. $w = u + vi$ bunda $u = e^v \cos x$, $v = -e^v \sin x$, $z_0 = i$.

$w = f(z)$ funksiya yordamida akslantirishda qisilish koefitsiyenti 1 ga teng bo'ladi dan nuqtani toping.

850. $w = z^2$.

851. $w = z^2 - 2z$.

$w = f(z)$ funksiya yordamida akslantirish bajarilganda, burish burchagi nolga teng bo'ladi dan nuqtani toping:

$$852. w = z^3.$$

$$853. w = iz^2.$$

53-§. Kompleks o'zgaruvchili funksiyaning integrali

Kompleks o'zgaruvchili funksiyaning integrali quyidagi formula bilan topiladi:

$$\int_{z_0}^z f(t) dt = F(z) - F(z_0) \text{ - Nyuton-Leybnis formulası,}$$

bunda $F(z)$ funksiya $f(z)$ funksiyaning boshlang'ich funksiyasi.

Koshi teoremasi. Barcha analitik $f(z)$ funksiyalar bir bog'lamli D sohadan olingan yopiq kontur uchun $\int_C f(z) dz$ integral qiymati nolga teng.

854. Integralni hisoblang: $\int_C z dz$.

$$\text{Yechish. } \int_C z dz = \frac{1}{2} z^2 \Big|_0^{i+1} = \frac{(i+1)^2 - i^2}{2} = \frac{2i+1}{2} = \frac{1}{2} + i.$$

855. Hisoblang: $\int_{AB} f(z) dz$, bunda $f(z) = (y+1) - xi$, AB kesma $z_A = 1$, $z_B = -i$ larni birlashtiradi.

$$\begin{aligned} \text{Yechish. } \int_{AB} f(z) dz &= \int_{AB} (y+1) dx + ixdy - i \int_{AB} x dx - (y+1) dy = \\ &= (y+1)x \Big|_{x=1, y=0}^{x=0, y=-1} - \frac{i}{2} x^2 \Big|_0^1 + \frac{i}{2} (y+1)^2 \Big|_0^{-1} = -1 + \frac{1}{2}i - \frac{1}{2}i = -1. \end{aligned}$$

856. Hisoblang: $\int_{AB} f(z) dz$, bunda $f(z) = x^2 + y^2 i$, AB kesma $A = 1+i$, $B = 2+3i$ larni birlashtiradi.

Yechish. $u = x^2$, $v = y^2$ ekanligidan:

$$\int_{AB} f(z) dz = \int_{AB} x^2 dx - y^2 dy + i \int_{AB} y^2 dx + x^2 dy.$$

Birinchi integral, aniq integral kabi hisoblanadi:

$$\int_{AB} x^2 dx - y^2 dy = \int_1^2 x^2 dx - \int_1^3 y^2 dy = \frac{x^3}{3} \Big|_1^2 - \frac{y^3}{3} \Big|_1^3 = \frac{7}{3} - \frac{26}{3} = -\frac{19}{3}.$$

Ikkinci integralni hisoblash uchun, AB to‘g‘ri chiziqni tenglamasini tuzamiz:

$$\frac{y-1}{3-1} = \frac{x-1}{2-1} \Rightarrow y = 2x - 1 \Rightarrow dy = 2dx.$$

$$\int_{AB} y^2 dx + x^2 dy = \int_1^2 \left[(2x-1)^2 + 2x^2 \right] dx = \int_1^2 (6x^2 - 4x + 1) dx = \\ = \left(2x^3 - 2x^2 + x \right) \Big|_1^2 = 10 - 1 = 9.$$

$$\text{Bundan } \int_{AB} f(z) dz = -\frac{19}{3} + 9i.$$

857. Hisoblang: $\int \bar{z} dz$, bunda γ : $x = \cos t$, $y = \sin t$ aylana.

Yechish. $z = x - iy$, $dz = dx + idy$ ekanligidan:

$$\int_{\gamma} \bar{z} dz = \int_{\gamma} x dx + y dy + i \int_{\gamma} x dy - y dx.$$

Birinchi integral yopiq sohada to‘la differensialdan olingan integral bo‘lgani uchun u nolga teng.

Ikkinci integralni hisoblash uchun, quyidagini e’tiborga olsak:

$$dx = -\sin t dt, dy = \cos t dt \Rightarrow xdy - ydx = \cos^2 t dt + \sin^2 t dt = dt.$$

$$\int_{\gamma} \bar{z} dz = i \int_0^{2\pi} dt = 2\pi i.$$

natija kelib chiqadi.

858. Hisoblang: $\int \frac{dz}{z-4}$ bunda γ – ellips: $x = 3\cos t$, $y = 2\sin t$.

Yechish. Integrallanuvchi funksiya analitik bo‘lgani uchun yopiq sohada, ya’ni ellipsda hisoblangani uchun Koshi teoremasiga asosan nolga teng:

$$\int_{\gamma} \frac{dz}{z-4} = 0.$$

859. Hisoblang: $\int \frac{dz}{z-(1+i)}$ bunda γ – aylana: $|z - (1+i)| = 1$.

Yechish. Aylanani tenglamasini $(x-1)^2 + (y-1)^2 = 1$ yoki $x = 1 + \cos t$, $y = 1 + \sin t$ almashtirish bajarib, $z = 1 + i + e^{it}$ ni hosil qilamiz. γ aylana bilan chegaralangan yopiq sohada integrallanuvchi funksiya analitik emas, chunki bu aylananing markazi

bo‘lgan $z=1+i$ nuqtada funksiya cheksizga intiladi. Biroq $dz=i \cdot e^u dt$ bo‘lganidan quyidagi kelib chiqadi:

$$\int_{\gamma} \frac{dz}{z-(1+i)} = \int_0^{2\pi} \frac{ie^u dt}{(1+i)+e^u - (1+i)} = i \int_0^{2\pi} \frac{e^u dt}{e^u} = 2\pi i.$$

Quyidagi integrallarni hisoblang

860. $\int_{\Gamma} f(z) dz$, bunda $f(z)=y+xi$, $\Gamma: \Delta OAB$ uchlari

$$z_0=0, z_A=i, z_B=-i$$

861. $\int_{AB} z^2 dz$, bunda AB kesma $z_A=1, z_B=i$ larni birlashtiradi.

862. $\int_{\gamma} z^{10} dz$, bunda γ - ellips: $\frac{x^2}{a^2} + \frac{y^2}{a^2} = 1$.

863. $\int_{\gamma} \frac{dz}{z^2}$, bunda γ -aylana: $(x-4)^2 + (y-3)^2 = 1$.

864. $\int_{\gamma} \frac{dz}{z}$, bunda γ -aylana: $z=e^u$.

865. $\int_{\Gamma} \operatorname{Re}(z^2 - z) dz$, bunda $\Gamma: y=2x^2$ parabolaning

$$z_1=0, z_2=1+2i$$
 nuqtalar orasidagi qismi.

866. $\int_{\Gamma} \operatorname{Re}(2\bar{z}) dz$, bunda $\Gamma: z_1=0, z_2=5-3i$ nuqtalar orasidagi to‘g‘ri chiziq.

867. $\int_{\Gamma} z \operatorname{Im} z dz$, bunda $\Gamma: z_1=1+i, z_2=2$ nuqtalar orasidagi to‘g‘ri chiziq.

868. $\int_{\Gamma} (z^2 - 3iz) dz$, bunda $\Gamma: z_1=1, z_2=i$ nuqtalar orasidagi to‘g‘ri chiziq.

869. $\int_{\Gamma} |z| \bar{z} dz$, bunda $\Gamma: |z|=1$ yopiq yarim aylana, soat strelkasiga qarama-qarshi yo‘nalishda.

870. $\int_{\Gamma} \frac{dz}{z-(3-2i)}$, bunda $\Gamma: |z-3+2i|=1$ yopiq yarim aylana, soat strelkasiga qarama-qarshi yo‘nalishda.

871*. $\int_{\Gamma} (z^2 + zz') dz$, bunda $\Gamma: y=x^2$ parabolaning $z_1=0, z_2=1+i$ nuqtalar orasidagi qismi.

872. $\int_{\Gamma} (1+i-2z) dz$, bunda $\Gamma: z_1=0, z_2=1+i$ nuqtalar orasidagi to'g'ri chiziq kesmasi.

$$873. \int_{-1}^{2+i} (3z^2 + 2z) dz.$$

$$874. \int_{-i}^{3-i} (z^2 - z + 1) dz.$$

$$875. \int_{\frac{\pi}{2}}^1 \sin zdz.$$

$$876. \int_0^1 (z + \cos z) dz.$$

54-§. Kompleks o'zgaruvchili qatorlar. Teylor va Loran qatorlari

Hadlari $c_1, c_2, \dots, c_n, \dots$ kompleks sonlardan iborat bo'lgan

$$\sum_{n=1}^{\infty} c_n = c_1 + c_2 + \dots + c_n + \dots \quad (17)$$

qatorga kompleks sohadagi qator deyiladi.

Hadlari $c_n = a_n + ib_n$ bo'lgan (17) qator quyidagi ko'rinishda yoziladi:

$$\sum_{n=1}^{\infty} c_n = \sum_{n=1}^{\infty} (a_n + ib_n) = \sum_{n=1}^{\infty} a_n + i \sum_{n=1}^{\infty} b_n.$$

(17) qatorning n -qismiy yig'indisi uchun

$$\lim_{n \rightarrow \infty} S_n = S = A + iB < \infty \quad (18)$$

shart bajarilsa, (17) qator yaqinlashuvchi, aks holda uzoqlashuvchi qator deyiladi.

Kompleks hadli qator uchun yaqinlashishning zaruriy sharti:

$$\lim_{n \rightarrow \infty} c_n = 0. \quad (19)$$

Taqqoslash alomati: $\sum_{n=1}^{\infty} c_n$ va $\sum_{n=1}^{\infty} c'_n$ qatorlar uchun N nomerdan boshlab $|c_n| \leq |c'_n|$ tengsizlik bajarilsa,

$\sum_{n=1}^{\infty} c'_n$ qator yaqinlashsa $\sum_{n=1}^{\infty} c_n$ qator ham yaqinlashadi;

$\sum_{n=1}^{\infty} c_n$ qator uzoqlashsa $\sum_{n=1}^{\infty} c'_n$ qator ham uzoqlashadi.

Dalamber alomati: (17) qator hadlari uchun

$$\lim_{n \rightarrow \infty} \frac{|c_{n+1}|}{|c_n|} = d \quad (20)$$

$d < 1$ bo'lsa, qator yaqinlashuvchi, $d > 1$ bo'lsa, qator uzoqlashuvchi bo'ladi.

Koshi alomati: (17) qator hadlari uchun

$$\lim_{n \rightarrow \infty} \sqrt{c_n} = l \quad (21)$$

$|l| < 1$ bo'lsa, qator yaqinlashuvchi, $|l| > 1$ bo'lsa, qator uzoqlashuvchi bo'ladi.

Darajali qator

$$\sum_{n=0}^{\infty} c_n z^n = c_0 + c_1 z + c_2 z^2 + \dots + c_n z^n + \dots \quad (22)$$

ning yaqinlashish radiusi Dalamber alomati yordamida $R = \lim_{n \rightarrow \infty} \frac{|c_n|}{|c_{n+1}|}$

formula bilan, Koshi alomati yordamida $R = \lim_{n \rightarrow \infty} \frac{1}{\sqrt[n]{|c_n|}}$ formula bilan topiladi.

$f(z)$ funksiya a nuqta yoki uni atrofida aniqlangan, uzlusiz va $(n+1)$ marta differensiallanuvchi bo'lsa, quyidagi **Teylor qatoriga** yoyiladi:

$$f(z) = f(a) + \frac{f'(a)}{1!}(z-a) + \frac{f''(a)}{2!}(z-a)^2 + \frac{f'''(a)}{3!}(z-a)^3 + \dots \quad (17)$$

Agar $a=0$ bo'lsa (17) qator quyida **Makloren qatori** hosil bo'ladi:

$$f(z) = f(0) + \frac{f'(0)}{1!}z + \frac{f''(0)}{2!}z^2 + \frac{f'''(0)}{3!}z^3 + \dots \quad (18)$$

Agar $f(z)$ funksiya bir qiymatli va $r < |z-a| < R$ halqada analitik funksiya bo'lsa, uni **Loran qatori** deb ataluvchi quyidagi qatorga yoyish mumkin:

$$\begin{aligned} f(z) = & \dots + \frac{A_{-3}}{(z-a)^3} + \frac{A_{-2}}{(z-a)^2} + \frac{A_{-1}}{z-a} + \\ & + A_0 + A_1(z-a) + A_2(z-a)^2 + A_3(z-a)^3 + \dots \end{aligned} \quad (19)$$

Loran qatorining koefitsiyentlari quyidagi formula bilan hisoblanadi:

$$A_n = \frac{1}{2\pi i} \int \frac{f(z)}{(z-a)^{n+1}} dz, \quad (n \in Z). \quad (20)$$

(19) qatorning kasrli qismi Loran qatorining **bosh qismi**, kasrsiz qismi esa **to'g'ri qismi** deyiladi.

Agar Loran qatori bosh qismga ega bo'lsa, a nuqta uning yakkalangan maxsus nuqtasi deyiladi.

(20) formula bilan topilgan koeffitsiyentlar $f(z)$ funksiyaning yakkalangan maxsus nuqtadagi **chigirmalari** deyiladi.

$f(z)$ funksiya $z=a$ nuqtada analitik funksiya bo'lib, chegaralangan bo'lsa, ya'ni $\lim_{z \rightarrow a} f(z) < \infty$, bu nuqtada bartaraf qilish mumkin bo'lgan maxsuslikka ega bo'ladi.

$f(z)$ funksiya $z=a$ nuqtada analitik funksiya bo'lib, chegaralanimagan bo'lsa, ya'ni $\lim_{z \rightarrow a} f(z) = \infty$, bu nuqtada bartaraf qilish mumkin bo'lmagan maxsuslikka ega, ya'ni qutb nuqta deyiladi.

Yakkalangan maxsus nuqtani, (19) qator bosh qismga ega bo'limasa, bartaraf qilish mumkin.

877. Quyidagi qatorlarni yaqinlashishga tekshiring:

$$1) \sum_{n=0}^{\infty} \left(\frac{1}{2^n} - i \frac{1}{3^n} \right), \quad 2) \sum_{n=0}^{\infty} \left(\frac{2-i}{3} \right)^n, \quad 3) \sum_{n=0}^{\infty} \frac{(z-2)^n}{n^2}.$$

Yechish. 1) Berilgan qatorning haqiqiy va mavhum qismlarini alohida-alohida qator shaklida yozib olamiz:

$$\sum_{n=0}^{\infty} \frac{1}{2^n} = 1 + \frac{1}{2} + \frac{1}{4} + \dots + \frac{1}{2^n} + \dots, \quad \sum_{n=0}^{\infty} \frac{1}{3^n} = 1 + \frac{1}{3} + \frac{1}{9} + \dots + \frac{1}{3^n} + \dots,$$

bu qatorlarning har ikkalaşını cheksiz kamayuvchi geometrik progressiya bo'lgani uchun yig'indisini topamiz:

$$s = \frac{1}{1-q} \Rightarrow s_1 = \frac{1}{1-\frac{1}{2}} = 2, \quad s_2 = \frac{1}{1-\frac{1}{3}} = \frac{3}{2}.$$

U holda berilgan qator yig'indisi $s = 2 - \frac{3}{2}i$ ga teng va u yaqinlashuvchi.

$$2) \text{Berilgan qator uchun } |c_n| = \left| \frac{2-i}{3} \right|^n.$$

Qatorning yaqinlashishini Koshi alomati bilan tekshiramiz:

$$\lim_{n \rightarrow \infty} \sqrt[n]{|c_n|} = \lim_{n \rightarrow \infty} \sqrt[n]{\left| \frac{2-i}{3} \right|^n} = \lim_{n \rightarrow \infty} \frac{|2-i|}{3} = \frac{\sqrt{5}}{3} < 1.$$

Demak, $\sum_{n=0}^{\infty} \left(\frac{2-i}{3} \right)^n$ qator yaqinlashuvchi.

3) Berilgan qator uchun

$$c_n = \frac{1}{n^2}, \quad c_{n+1} = \frac{1}{(n+1)^2}, \quad R = \lim_{n \rightarrow \infty} \frac{|c_n|}{|c_{n+1}|} = \lim_{n \rightarrow \infty} \frac{(n+1)^2}{n^2} = 1.$$

Demak, berilgan qator $|z - 1| < 1$ da, ya'ni markazi $z_0 = 2$ va radiusi $R = 1$ bo'lgan doira ichida yaqinlashadi. Chegaradagi qiymatni tekshiramiz:

$$\left| \frac{(z-2)^n}{n^2} \right| = \frac{|z-2|^n}{n^2} = \frac{1}{n^2}.$$

$\sum_{n=0}^{\infty} \frac{1}{n^2}$ qator absolyut yaqinlashuvchi bo'ladi. Demak, berilgan qatorning yaqinlashish to'plami $|z - 2| < 1$ doiradan iborat bo'ladi.

878. $\sum_{n=0}^{\infty} (2 + 2i)^n z^n$ qatorning yaqinlashish radiusini toping.

Yechish. Berilgan qator uchun $|c_n| = |2 + 2i|^n = (\sqrt{8})^n$. U holda

$$\lim_{n \rightarrow \infty} \sqrt[n]{\frac{1}{|c_n|}} = \sqrt[n]{\frac{1}{(\sqrt{8})^n}} = \frac{1}{\sqrt{8}} = \frac{\sqrt{2}}{4}.$$

879. Quyidagi funksiyalarni berilgan qiymatida Teylor qatoriga yoying.

1) $f(z) = z^5$ funksiyani $z = i$ ning darajalari bo'yicha,

2) $f(z) = ch(1-z)$ funksiyani $z = \left(1 - \frac{\pi}{2}i\right)$ ning darajalari bo'yicha.

Yechish. 1) Funksiyaning hosilalarini topamiz:

$$f(z) = z^5, \quad f'(z) = 5z^4, \quad f''(z) = 20z^3, \quad f'''(z) = 60z^2,$$

$$f^{(IV)}(z) = 120z, \quad f^{(V)}(z) = 120, \quad f^{(VI)}(z) = 0, \dots.$$

Hosilalarning $a = i$ nuqtadagi qiymatlarini hisoblaymiz:

$$f(i) = i, \quad f'(i) = 5i, \quad f''(i) = -20i, \quad f'''(i) = -60,$$

$$f^{(IV)}(i) = 120i, \quad f^{(V)}(i) = 120, \quad f^{(VI)}(i) = 0, \dots.$$

Bulami (17) formulaga qo'ysak, quyidagi qator hosil bo'ladi:

$$f(z) = i + 5(z-i) - 10(z-i)^2 - 10(z-i)^3 + 5i(z-i)^4 + (z-i)^5.$$

Demak, $f(z) = z^5$ beshinchchi darajali ko'phad ekan.

2) Funksiyaning hosilalarini topamiz:

$$f(z) = ch(1-z), \quad f(a) = ch\left(\frac{\pi i}{2}\right) = \cos \frac{\pi}{2} = 0,$$

$$f'(z) = -sh(1-z), \quad f(a) = -sh\left(\frac{\pi i}{2}\right) = -i \sin \frac{\pi}{2} = -i,$$

$$f''(z) = ch(1-z), \quad f''(a) = 0,$$

$$f'''(z) = -sh(1-z), \quad f'''(a) = -i.$$

Bularni (17) formulaga qo'ysak, quyidagi qator hosil bo'ladi:

$$f(z) = -i \left[\left(z - 1 + \frac{\pi i}{2} \right) + \frac{1}{3!} \left(z - 1 + \frac{\pi i}{2} \right)^3 + \frac{1}{5!} \left(z - 1 + \frac{\pi i}{2} \right)^5 + \dots \right].$$

880. Quyidagi qatorni yaqinlashishga tekshiring.

$$\dots + \frac{1}{2^3(z-1)^3} + \frac{1}{2^2(z-1)^2} + \frac{1}{2(z-1)} + 1 + \frac{z-1}{5} + \frac{(z-1)^2}{5^2} + \frac{(z-1)^3}{5^3} + \dots$$

Yechish. Ikkita qatorni ko'ramiz:

$$\frac{1}{2(z-1)} + \frac{1}{2^2(z-1)^2} + \frac{1}{2^3(z-1)^3} + \dots \quad (a)$$

$$1 + \frac{z-1}{5} + \frac{(z-1)^2}{5^2} + \frac{(z-1)^3}{5^3} + \dots \quad (b)$$

Agar (a) qatorda $z-1 = \frac{1}{z_1}$ almashtirish bajarsak, quyidagi

darajali qator hosil bo'ladi:

$$\frac{z_1}{2} + \frac{z_1^2}{2^2} + \frac{z_1^3}{2^3} + \dots \quad (a)$$

Dalamber formulasi yordamida yaqinlashish radiusini topamiz:

$$R = \lim_{n \rightarrow \infty} \frac{1/2^{n-1}}{1/2^n} = 2.$$

Bundan (a) qatorni $|z| < 2$ qiymatida yaqunlashuvchi bo'ladi.

Natijada, (a) qatorni $\left| \frac{1}{z-1} \right| < 2$ bajariladigan qiymatlarda yaqinlashuvchi bo'ladi. U holda $|z-1| > 2^{-1}$, demak, (a) qator $R = \frac{1}{2}$ radiusli $z=1$ aylanadan tashqarida yaqinlashuvchi bo'ladi.

Dalamber formulasi yordamida (b) qatoring yaqinlashish radiusini topamiz:

$$R = \lim_{n \rightarrow \infty} \frac{1/5^{n-1}}{1/5^n} = 5.$$

Bundan ko'rindik, (b) qatoring yaqinlashish radiusi $|z-1| < 5$.

Demak, qatoring yaqinlashish oralig'i:

$$\frac{1}{2} < |z - 1| < 5.$$

881. Quyidagi qatorni yaqinlashishiga tekshiring

$$\dots + \frac{(3+4i)^3}{z^3} + \frac{(3+4i)^2}{z^2} + \frac{(3+4i)}{z} + 1 + \frac{z}{i} + \frac{z^2}{i^2} + \frac{z^3}{i^3} + \dots$$

Yechish. Ikkita qatorni ko‘ramiz:

$$\frac{3+4i}{z} + + \frac{(3+4i)^2}{z^2} + \frac{(3+4i)^3}{z^3} + \dots \quad (a)$$

$$1 + \frac{z}{i} + \frac{z^2}{i^2} + \frac{z^3}{i^3} + \dots \quad (b)$$

(a) va (b) qatorlar mos ravishda $\frac{3+4i}{z}$ va $\frac{z}{i}$ bo‘lgan geometrik progressiyadan iborat. $\left| \frac{3+4i}{z} \right| < 1$ va $\left| \frac{z}{i} \right| < 1$ bo‘lganda qatorlar yaqinlashuvchi bo‘ladi. $|3+4i| = \sqrt{9+16} = 5$ ekanidan $|z| < 1$, $\frac{5}{|z|} < 1 \Rightarrow |z| > 5$.

Bu tengsizliklar birgalikda bo‘limgani uchun berilgan qator tekislikning hech bir nuqtasida yaqinlashmaydi.

882. Quyidagi funksiyalarni z ning darajalari bo‘yicha berilgan nuqtada Loran qatoriga yoying:

$$1) f(z) = \frac{1}{2z-5}, \quad z=0 \text{ nuqtada},$$

$$2) f(z) = \frac{1}{2z-5}, \quad z=\infty \text{ nuqtada}.$$

Yechish. 1) Funksiyani $f(z) = \frac{1}{2z-5} = -\frac{\frac{1}{5}}{1-\frac{2z}{5}}$ ko‘rinishda yozib olamiz. $z=0$ nuqta atrofida $\left| \frac{2z}{5} \right| < 1$, shunung uchun bu funksiyani birinchi hadi $a = -\frac{1}{5}$ va maxraji $q = \frac{2z}{5}$ bo‘lgan, cheksiz kamayuvchi geometrik progressiyaning yig‘indisi sifatida qarash mumkin. Bundan esa

$$f(z) = -\frac{1}{5} - \frac{2z}{5^2} - \frac{(2z)^2}{5^3} - \frac{(2z)^3}{5^4} - \dots \text{ yoki } f(z) = -\sum_{n=1}^{\infty} \frac{(2z)^{n-1}}{5^n}.$$

Ushbu yoyilma faqat to‘g‘ri hadlardan iborat bo‘ldi. $\left|\frac{2z}{5}\right| < 1$

tengsizlikdan, $|z| < \frac{5}{2}$ da qator yaqinlashuvchi bo‘ladi.

2) Funksiyani $f(z) = \frac{1}{2z-5} = \frac{\frac{1}{2z}}{1-\frac{5}{2z}}$ ko‘rinishda yozib olamiz.

$z=\infty$ nuqta atrofida $\left|\frac{5}{2z}\right| < 1$, shunung uchun bu funksiyani birinchi hadi $a = \frac{1}{2z}$ va maxraji $q = \frac{5}{2z}$ bo‘lgan cheksiz kamayuvchi geometrik progressiyaning yig‘indisi sifatida qarash mumkin. Shunday qilib,

$$f(z) = \frac{1}{2z} + \frac{5}{(2z)^2} + \frac{5^2}{(2z)^3} + \frac{5^3}{(2z)^4} + \dots \text{ yoki } f(z) = \sum_{n=1}^{\infty} \frac{5^{n-1}}{(2z)^n}.$$

Bu qatorda to‘g‘ri hadlar qismi qatnashmas ekan. Qator $|z| > \frac{5}{2}$, ya’ni aylanadan tashqarida yaqinlashuvchi bo‘ladi.

883. $f(z) = \frac{1}{(z-1)(z-3)}$ funksiyani z ning darajalari bo‘yicha $1 < |z| < 3$ halqada Loran qatoriga yoying.

Yechish. Funksiyani sodda kasrlarga yoyamiz:

$$\frac{1}{(z-1)(z-3)} = \frac{A}{z-1} + \frac{B}{z-3} \Rightarrow 1 = A(z-3) + B(z-1) \Rightarrow A = -\frac{1}{2}, \quad B = \frac{1}{2}.$$

U holda,

$$f(z) = -\frac{1}{2} \cdot \frac{1}{z-1} + \frac{1}{2} \cdot \frac{1}{z-3}.$$

$1 < |z| < 3$ ekanini e’tiborga olib, funksiyani quyidagicha yozib olamiz:

$$f(z) = -\frac{1}{2} \cdot \frac{1/z}{1-1/z} - \frac{1}{2} \cdot \frac{1/3}{1-z/3}.$$

Natijada Loran qatori quyidagi ko‘rinishda bo‘ladi:

$$f(z) = -\frac{1}{2} \cdot \sum_{n=1}^{\infty} \left(\frac{1}{z^n} + \frac{z^{n-1}}{3^n} \right).$$

884. $f(z) = \frac{z^4}{(z-2)^2}$ funksiyani $z=2$ ning darajalari bo'yicha Loran qatoriga yoying.

Yechish. $z=2 = z_1$ almashtirish bajaramiz. U holda

$$f(z) = \frac{z^4}{(z-2)^2} = \frac{(z_1+2)^4}{z_1^2} = \frac{z_1^4 + 8z_1^3 + 24z_1^2 + 32z_1 + 16}{z_1^2} = \frac{16}{z_1^2} + \frac{32}{z_1} + 24 + 8z_1 + z_1^2.$$

$$zo'zgaruvchiga qaytsak, f(z) = \frac{16}{(z-2)^2} + \frac{32}{z-2} + 24 + 8(z-2) + (z-2)^2.$$

885. Quyidagi qatorni yaqinlashishga tekshiring:

$$1) \sum_{n=1}^{\infty} \frac{\cos \sqrt{n} + i \sin \sqrt{n}}{n^2}, \quad 2) \sum_{n=1}^{\infty} \frac{e^{\frac{\pi i}{n}}}{n}, \quad 3) \sum_{n=1}^{\infty} \frac{1}{(n+i)\sqrt{n}}.$$

$$4) \sum_{n=1}^{\infty} \frac{\cos i\pi n}{2^n}, \quad 5) \sum_{n=1}^{\infty} \frac{ch \frac{\pi}{n}}{n^{ln n}}, \quad 6) \sum_{n=1}^{\infty} \left(\frac{1}{n} + i \frac{1}{n\sqrt{n}} \right).$$

886. Quyidagi qatorni absolyut va shartli yaqinlashishga tekshiring:

$$1) \sum_{n=1}^{\infty} \frac{i^n}{n}, \quad 2) \sum_{n=1}^{\infty} \frac{\sin in}{3^n}, \quad 3) \sum_{n=1}^{\infty} \frac{(\sin m)^n}{n \cdot \sinh n}, \quad 4) \sum_{n=1}^{\infty} \frac{(1+i)^n \sin in}{2^n \cos in}.$$

887. Quyidagi qatorni yaqinlashish radiusini toping:

$$1) \sum_{n=1}^{\infty} \frac{z^n}{n^n}, \quad 2) \sum_{n=1}^{\infty} \frac{n!}{3^n} z^n, \quad 3) \sum_{n=1}^{\infty} \frac{n^n}{n!} z^n, \quad 4) \sum_{n=1}^{\infty} n! e^{-n^2} z^n,$$

$$5) \sum_{n=1}^{\infty} \cos i^{-6} n z^n, \quad 6) \sum_{n=1}^{\infty} e^{in} z^n, \quad 7) \sum_{n=1}^{\infty} \sin \left(\frac{\pi}{n} \right) z^n, \quad 8) \sum_{n=1}^{\infty} \frac{1}{\sin^n (1+in)} z^n.$$

888. Quyidagi qatorni yaqinlashish doirasini toping:

$$1) \sum_{n=1}^{\infty} \frac{(n+i)}{2^n} z^n, \quad 2) \sum_{n=1}^{\infty} e^{2^{nn}} z^n, \quad 3) \sum_{n=1}^{\infty} n^n (z-2)^n, \quad 4) \sum_{n=1}^{\infty} \cos in (z-1)^n,$$

$$5) \sum_{n=1}^{\infty} i^{-n} z^n, \quad 6) \sum_{n=1}^{\infty} \frac{1}{\ln^n (in)} z^n, \quad 7) \sum_{n=1}^{\infty} \left(\frac{z}{1-i} \right)^n, \quad 8) \sum_{n=1}^{\infty} \cos^n \frac{\pi i}{\sqrt{n}} z^n.$$

889. Quyidagi qatorni yaqinlashishga tekshiring:

$$\dots + \frac{1}{z^1} + \frac{1}{z^2} + \frac{1}{z} + 1 + \frac{z}{2} + \left(\frac{z}{2} \right)^2 + \left(\frac{z}{2} \right)^3 + \dots$$

890. Quyidagi qatorni yaqinlashishga tekshiring:

$$\dots + \frac{4}{z^4} + \frac{3}{z^3} + \frac{2}{z^2} + \frac{1}{z} + 1 + 2z + (2z)^2 + (2z)^3 + \dots$$

$f(z)$ funksiyalarni z_0 nuqtada Taylor qatoriga yoying

$$891. f(z) = \frac{1}{2-z}, \quad z_0 = 0. \quad 892. f(z) = \frac{1}{z^2+1}, \quad z_0 = 0.$$

$$893. f(z) = \frac{1}{5-3z}, \quad z_0 = 1. \quad 894. f(z) = \frac{1}{(1-z)^2}, \quad z_0 = 0.$$

$f(z)$ funksiyalarni z_0 nuqtada Loran qatoriga yoying

$$895. f(z) = \frac{2z-3}{z^2-3z+2}, \quad z_0 = 2. \quad 896. f(z) = \frac{1}{z(3-z)}, \quad z_0 = 0.$$

$$897*. f(z) = \frac{1}{(z-1)(z-2)}, \quad z_0 = 0. \quad 898*. f(z) = \frac{1}{z^2-z-6}, \quad z_0 = 0.$$

55-§. Funksiyaning chegirmasi. Koshi teoremasi

Koshi teoremasi. G sohada analitik bo'lgan $f(z)$ funksiyaning shu sohada yotuvchi va maxsus nuqtalarini o'z ichiga olmagan yopiq L kontur bo'yicha integrali nolga teng.

Agar $f(z)$ funksiyaning yopiq L konturning ichida a maxsus nuqtasi bo'lsa, bu nuqtadagi integrali a qutbga nisbatan n -tartibli **chegirmasi** quyidagicha hisoblanadi:

$$\text{res}_a f(z) = \frac{1}{(n-1)!} \lim_{z \rightarrow a} \frac{d^{n-1}[(z-a)^n f(z)]}{dz^{n-1}}. \quad (21)$$

Agar a qutb 1-tartibli bo'lsa, chegirma quyidagicha bo'ladi:

$$\text{res}_a f(z) = \lim_{z \rightarrow a} (z-a) f(z). \quad (22)$$

Agar $\varphi(z)$ va $\psi(z)$ funksiyalar z_0 nuqtada analitik funksiyalar bo'lsa, $f(z) = \frac{\varphi(z)}{\psi(z)}$ ning chegirmasi, quyidagi formula yordamida topiladi:

$$\text{res}_a f(z) = \frac{\varphi(a)}{\psi'(a)}. \quad (23)$$

$$899. f(z) = \frac{z}{(z-1)(z-3)} \text{ funksiyaning chegirmasini hisoblang.}$$

Yechish. $z=1$ va $z=3$ nuqtalar funksiya uchun oddiy qutblar bo'lgani uchun shu nuqtalardagi chegirmalarni (22) formula yordamida hisoblaymiz:

$$\operatorname{res} f(z) = \lim_{z \rightarrow 1} (z-1) \frac{z}{(z-1)(z-3)} = \lim_{z \rightarrow 1} \frac{z}{z-3} = -\frac{1}{2},$$

$$\operatorname{res} f(z) = \lim_{z \rightarrow 3} (z-3) \frac{z}{(z-1)(z-3)} = \lim_{z \rightarrow 3} \frac{z}{z-1} = \frac{3}{2}.$$

900. $f(z) = \frac{1}{z^2 + 4}$ funksiyaning chegirmasini hisoblang.

Yechish. $f(z) = \frac{1}{z^2 + 4} = \frac{1}{(z-2i)(z+2i)} \Rightarrow z = 2i \text{ va } z = -2i \text{ nuqtalar}$

funksiya uchun oddiy qutblar bo'lgani uchun shu nuqtalardagi chegirmalarni (22) formula yordamida hisoblaymiz:

$$\operatorname{res} f(z) = \lim_{z \rightarrow 2i} (z-2i) \frac{1}{(z-2i)(z+2i)} = \lim_{z \rightarrow 2i} \frac{1}{z+2i} = \frac{1}{4i} = -\frac{i}{4},$$

$$\operatorname{res} f(z) = \lim_{z \rightarrow -2i} (z+2i) \frac{1}{(z-2i)(z+2i)} = \lim_{z \rightarrow -2i} \frac{1}{z-2i} = -\frac{1}{4i} = \frac{i}{4}.$$

901. $f(z) = \frac{1}{z^2 - 2z + 5}$ funksiyaning chegirmasini hisoblang.

Yechish. $f(z) = \frac{1}{z^2 - 2z + 5} = |z_{1,2} = 1 \pm 2i| = \frac{1}{(z-1-2i)(z-1+2i)} \Rightarrow$

$z_1 = 1 - 2i$ va $z_2 = 1 + 2i$ nuqtalar funksiya uchun oddiy qutblar bo'lgani uchun shu nuqtalardagi chegirmalarni (22) formula yordamida hisoblaymiz:

$$\operatorname{res} f(z) = \lim_{z \rightarrow 1+2i} \frac{(z-1-2i)}{(z-1-2i)(z-1+2i)} = \lim_{z \rightarrow 1+2i} \frac{1}{z-1+2i} = -\frac{i}{4},$$

$$\operatorname{res} f(z) = \lim_{z \rightarrow 1-2i} \frac{(z-1+2i)}{(z-1-2i)(z-1+2i)} = \lim_{z \rightarrow 1-2i} \frac{1}{z-1-2i} = \frac{i}{4}.$$

902. $f(z) = \frac{z^2}{(z-2)^3}$ funksiyaning chegirmasini hisoblang.

Yechish. $z = 2$ nuqta funksiya uchun uchinchi tartibli qutb bo'lgani uchun shu nuqtalardagi chegirmalarni (21) formula yordamida hisoblaymiz:

$$\operatorname{res} f(z) = \frac{1}{2!} \lim_{z \rightarrow 2} \frac{d^2 \left[(z-2)^3 \frac{z^2}{(z-2)^3} \right]}{dz^2} = \frac{1}{2!} \lim_{z \rightarrow 2} \frac{d^2 [z^2]}{dz^2} = \frac{1}{2!} \cdot 2 = 1.$$

903. $f(z) = \frac{z^2}{1 - \cos z}$ funksiyaning chegirmasini $z=0$ qutbga nisbatan hisoblang.

Yechish. $z=0$ nuqta funksiya uchun birinchi tartibli quib bo'ladi. Haqiqatan ham,

$$\lim_{z \rightarrow 0} \frac{z^2}{1 - \cos z} = \lim_{z \rightarrow 0} \frac{2z}{\sin z} = \lim_{z \rightarrow 0} \frac{2}{\cos z} = 2,$$

chekli son. Shuning uchun bu nuqtalardagi chegirmalarni (21) formula yordamida topamiz:

$$\begin{aligned} \operatorname{res}_0 f(z) &= \lim_{z \rightarrow 0} \frac{d}{dz} \left(\frac{z^2}{1 - \cos z} \right) = \lim_{z \rightarrow 0} \frac{2z(1 - \cos z) - z^2 \sin z}{(1 - \cos z)^2} = \\ &= \lim_{z \rightarrow 0} \frac{2z \left(\frac{z^2}{2!} - \frac{z^4}{4!} + \dots \right) - z^2 \left(\frac{z}{1!} - \frac{z^3}{3!} + \dots \right)}{\left(\frac{z^2}{2!} - \frac{z^4}{4!} + \dots \right)^2} = \lim_{z \rightarrow 0} \frac{\frac{z^5}{12}}{\left(\frac{z^2}{2!} - \frac{z^4}{4!} + \dots \right)^2} = 0. \end{aligned}$$

Quyidagi funksiyalarining z_0 nuqtadagi chegirmalarini toping

$$904. f(z) = \frac{\lg z}{z^2 - 6z}, \quad z_0 = 0.$$

$$905. f(z) = \frac{e^{\frac{1}{z^3}}}{z^3 + 1}, \quad z_0 = 0.$$

$$906. f(z) = \frac{\sin z^2}{z^3 - \pi z^2}, \quad z_0 = \pi.$$

$$907. f(z) = \frac{z}{z^2 - 6z + 8}, \quad z_0 = 4.$$

$$908. f(z) = \frac{\lg z}{(z+1)^3(z-2)}, \quad z_0 = 2. \quad 909. f(z) = \frac{z+3}{z^3 - z^2}, \quad z_0 = 1.$$

$$910. f(z) = z^2 \cos \frac{1}{z-1}, \quad z_0 = 1. \quad 911*. f(z) = \ln z \sin \frac{1}{z-1}, \quad z_0 = 1.$$

56-§. Chegirmalarni integral hisoblashga qo'llash

Agar qutb nuqtalar kontur ichida bo'lsa, yopiq kontur bo'yicha integralni quyidagi teoremadan foydalanim hisoblanadi:

Teorema. Agar $f(z)$ funksiya L kontur bilan chegaralangan \bar{G} yopiq sohada chekli sondagi z_1, z_2, \dots, z_n nuqtalardan boshqa barcha nuqtalarda analitik bo'lsa, u holda $f(z)$ funksiyaning yopiq kontur bo'ylab olingan integrali uchun

$$\oint_L f(z) dz = 2\pi i \sum_{j=1}^k \operatorname{res}_j f(z_j) \quad (24)$$

formula o'rinni bo'ldi.

912. $\int_{\gamma} \frac{z+1}{(z-1)(z-2)(z-3)} dz$ integralni $\gamma: z=1, z=2, z=3$ nuqtalarni ichiga olgan yopiq kontur bo'yicha hisoblang.

Yechish. Berilgan nuqtalardagi chegirmalarni (22) formula bilan hisoblaymiz:

$$\operatorname{res}_1 f(z) = \lim_{z \rightarrow 1} (z-1) \frac{z+1}{(z-1)(z-2)(z-3)} = \lim_{z \rightarrow 1} \frac{z+1}{(z-2)(z-3)} = 1,$$

$$\operatorname{res}_2 f(z) = \lim_{z \rightarrow 2} (z-2) \frac{z+1}{(z-1)(z-2)(z-3)} = \lim_{z \rightarrow 2} \frac{z+1}{(z-1)(z-3)} = -3,$$

$$\operatorname{res}_3 f(z) = \lim_{z \rightarrow 3} (z-3) \frac{z+1}{(z-1)(z-2)(z-3)} = \lim_{z \rightarrow 3} \frac{z+1}{(z-1)(z-2)} = 2.$$

Integralni teoremaiga asosan (24) formuladan foydalaniib hisoblaymiz:

$$\int_{\gamma} \frac{z+1}{(z-1)(z-2)(z-3)} dz = 2\pi i \sum_{j=1}^3 \operatorname{res}_j f(z) = 2\pi i (1 - 3 + 2) = 0.$$

913. $\int_{\gamma} \frac{z^2}{(z^2+1)(z-2)} dz$ integralni $\gamma: |z|=3$ aylanada hisoblang.

Yechish. $f(z) = \frac{z^2}{(z^2+1)(z-2)}$ funksiya uchun $i, -i, 2$ nuqtalarini konturning ichiga joylashgani uchun, har bir nuqtadagi chegirmalarni (22) formula bilan hisoblaymiz:

$$\operatorname{res}_i f(z) = \lim_{z \rightarrow i} (z-i) \frac{z^2}{(z-i)(z+i)(z-2)} = \lim_{z \rightarrow i} \frac{z^2}{(z+i)(z-2)} = \frac{1}{2i(2-i)},$$

$$\operatorname{res}_{-i} f(z) = \lim_{z \rightarrow -i} (z+i) \frac{z^2}{(z-i)(z+i)(z-2)} = \lim_{z \rightarrow -i} \frac{z^2}{(z-i)(z-2)} = -\frac{1}{2i(2+i)},$$

$$\operatorname{res}_2 f(z) = \lim_{z \rightarrow 2} (z-2) \frac{z^2}{(z-i)(z+i)(z-2)} = \lim_{z \rightarrow 2} \frac{z^2}{(z-i)(z+i)} = \frac{4}{5}.$$

Integralni teoremaiga asosan (24) formuladan foydalaniib hisoblaymiz:

$$\int_{\gamma} \frac{z^2}{(z^2+1)(z-2)} dz = 2\pi i \sum_{j=1}^3 \operatorname{res}_j f(z) = 2\pi i \left(\frac{1}{2i(2-i)} - \frac{1}{2i(2+i)} + \frac{4}{5} \right) =$$

$$= \pi \left(\frac{1}{2-i} - \frac{1}{2+i} + \frac{8}{5}i \right) = \pi \left(\frac{2}{5}i + \frac{8}{5}i \right) = 2\pi i.$$

914. $\int_{-\infty}^{\infty} \frac{dz}{(z^2 + 4)^2}$ integralini hisoblang.

Yechish. $f(z) = \frac{1}{(z^2 + 4)^2}$ funksiya yuqori yarim tekislikning

$z = 2i$ nuqtadan tashqari barcha nuqtalarida analitik funksiya. Bundan tashqari,

$$\lim_{|z| \rightarrow \infty} z^2 f(z) = \lim_{|z| \rightarrow \infty} \frac{z^2}{(z^2 + 4)^2} = 0$$

chekli sondan iborat. $f(z) = \frac{1}{(z^2 + 4)^2}$ funksiyaning ikkinchi tartibli $2i$

qutbidagi chigirmasini topamiz:

$$\operatorname{res}_i f(z) = \lim_{z \rightarrow 2i} \frac{d}{dz} \left[\frac{(z-2i)^2}{(z+4)^2} \right] = \lim_{z \rightarrow 2i} \frac{d}{dz} \left[\frac{1}{(z+2i)^2} \right] = \lim_{z \rightarrow 2i} \frac{-2}{(z+2i)^3} = \frac{2}{64i} = -\frac{i}{32}.$$

Buni e'tiborga olib, quyidagi natijani hosil qilamiz:

$$\int_{-\infty}^{\infty} \frac{dz}{(z^2 + 4)^2} = 2\pi i \left(-\frac{i}{32} \right) = \frac{\pi}{16}.$$

915. $\int_{\gamma} \frac{dz}{z(z+2)(z+4)}$ integralni γ – aylanada:

1) $|z|=1$, 2) $|z|=3$, 3) $|z|=5$ bo‘lgan hollar uchun hisoblang.

Yechish. $f(z) = \frac{1}{z(z+2)(z+4)}$ funksiyani $0, -2, -4$ nuqtalar

uchun, har bir nuqtadagi chegirmalarni (22) formula bilan hisoblaymiz:

$$\operatorname{res}_0 f(z) = \lim_{z \rightarrow 0} z \frac{1}{z(z+2)(z+4)} = \lim_{z \rightarrow 0} \frac{1}{(z+2)(z+4)} = \frac{1}{8},$$

$$\operatorname{res}_{-2} f(z) = \lim_{z \rightarrow -2} (z+2) \frac{1}{z(z+2)(z+4)} = \lim_{z \rightarrow -2} \frac{1}{z(z+4)} = -\frac{1}{4},$$

$$\operatorname{res}_{-4} f(z) = \lim_{z \rightarrow -4} (z+4) \frac{1}{z(z+2)(z+4)} = \lim_{z \rightarrow -4} \frac{1}{z(z+2)} = \frac{1}{8}.$$

1) $|z|=1$ aylana ichida, faqat $z=0$ qutb yotadi, shuning uchun:

$$\int_{\gamma} f(z) dz = 2\pi i \cdot \frac{1}{8} = \frac{\pi i}{4},$$

2) $|z|=3$ aylana ichida, faqat $z=0, z=-2$ qutblar yotadi, shuning uchun:

$$\int_{\gamma} f(z) dz = 2\pi i \cdot \left(\frac{1}{8} - \frac{1}{4} \right) = -\frac{\pi i}{4},$$

3) $|z|=5$ aylana ichida $z=0, z=-2, z=-4$ qutblar yotadi, shuning uchun:

$$\int_{\gamma} f(z) dz = 2\pi i \cdot \left(\frac{1}{8} - \frac{1}{4} + \frac{1}{8} \right) = 0.$$

Quyidagi integrallarni hisoblang

916. $\int_{\gamma} \frac{z^2}{z-a} dz$, bunda γ – aylana $|z|=R > |a|$.

917. $\int_{\gamma} \frac{z dz}{(z-a)(z-b)}$, bunda γ – aylana $|z|=R, R > |a|, R > |b|, a \neq b$.

918. $\int_{\gamma} \frac{dz}{z^2 - 2z + 2}$, bunda γ – maxrajning qutblarini o‘z ichiga oluvchi aylanada.

919. $\int_{\gamma} \frac{z dz}{(z-i)(z-3)}$, bunda γ – aylana $|z|=2$.

920. $\int_{-\infty}^{\infty} \frac{dz}{(z^2 + 1)^2}$

921. $\int_{-\infty}^{+\infty} \frac{z^2 dz}{(1+4z^2)^2}$

922. $\int_0^{\frac{\pi}{2}} \frac{dz}{3 + \cos z}$

923. $\int_0^{\frac{\pi}{2}} \frac{\sin^3 z dz}{5 + 4 \cos z}$.

VII BOB. MATEMATIK – FIZIKA TENGLAMALARI

57-§. Birinchi tartibli xususiy hosilali differensial tenglamalar

1-ta'rif. $z(x,y)$ funksiya va uning birinchi tartibli xususiy hosilalarini o'z ichiga oluvchi

$$F\left(x, y, z, \frac{\partial z}{\partial x}, \frac{\partial z}{\partial y}\right) = 0 \quad (1)$$

ko'rinishdagi tenglama **birinchi tartibli xususiy hosilali differensial tenglama** deyiladi.

2-ta'rif. (1) tenglamaning umumiy yechimi deb, tenglamaga qo'yganda uni ayniyatga aylantiruvchi o'zi va birinch tartibli hosilaari berilgan sohada uzliksiz bo'lgan $z(x,y)$ funksiyaga aytildi.

Quyidagi differensial tenglamani qaraymiz

$$X \frac{\partial z}{\partial x} + Y \frac{\partial z}{\partial y} = Z, \quad (2)$$

bunda X, Y, Z -funksiyalar x, y, z ning funksiyalari. Bu tenglamaga mos, oddiy differensial tenglamalar sistemasi quyidagi ko'rinishda bo'ladi:

$$\frac{\partial x}{X} = \frac{\partial y}{Y} = \frac{\partial z}{Z}. \quad (3)$$

(3) sistema o'z navbatida:

$$\frac{\partial x}{X} = \frac{\partial y}{Y} = \frac{\partial z}{Z} \Rightarrow \frac{dx}{dy} = \frac{X}{Y}, \quad \frac{dx}{dz} = \frac{X}{Z}, \quad \frac{dy}{dz} = \frac{Y}{Z}$$

oddiy differensial tenglamalarga teng kuchli.

Differensial tenglamalar sistemasining yechimi

$$\omega_1(x, y, z) = C_1, \quad \omega_2(x, y, z) = C_2 \quad (4)$$

ko'rinishda bo'lisin. U holda (2) tenglamaning umumiy yechimi

$$\Phi[\omega_1(x, y, z), \omega_2(x, y, z)] = 0. \quad (5)$$

ko'rinishda bo'ladi, bu yerda $\Phi[\omega_1, \omega_2]$ ixtiyoriy uzliksiz, differensiallanuvchi funksiya.

Umuman olganda, xususiy hosilali (2) differensial tenglamaning yechimi (3) ko'rinisdag'i oddiy differensial tenglamalar sistemasini yechishga keltiriladi va (3) sistemani (2) tenglamaga mos sistema deyiladi.

Koshi masalasi. (2) tenglamani shunday

$$u|_{x_n=y} = \varphi(x_1, x_2, \dots, x_{n-1})$$

boshlang'ich shartni qanoatlaniruvchi yechimi topilsin.

924. $\frac{\partial z}{\partial x} = 1$ tenglamaning umumiy yechimini toping.

Yechish. $\frac{\partial z}{\partial x} = 1 \Rightarrow \partial z = \partial x \Rightarrow \int \partial z = \int \partial x + \psi(y) \Rightarrow z = x + \psi(y)$. Bu yerda $\psi(y)$ ixtiyoriy funksiya.

925. $y \frac{\partial z}{\partial x} - x \frac{\partial z}{\partial y} = 0$ tenglamaning umumiy yechimini toping.

Yechish. Mos oddiy differensial tenglamalar sistemasini tuzamiz:

$$\frac{dx}{y} = -\frac{dy}{x} \Rightarrow xdx = -ydy \Rightarrow \int xdx = -\int ydy + \frac{1}{2}C \Rightarrow x^2 + y^2 = C.$$

Tenglamaning umumiy yechimi: $z = \psi(x^2 + y^2)$.

926. $y \frac{\partial z}{\partial x} - x \frac{\partial z}{\partial y} = 0$ tenglamani $z|_{y=0} = \varphi(x)$ shartni qanoatlaniruvchi yechimini toping.

Yechish. 925-misolda berilgan tenglamaning umumiy yechimini

$$z = \psi(x^2 + y^2)$$

ko'rinishda hosil qilgan edik. Bu holda

$$\varphi(x, y) = x^2 + y^2 \Rightarrow \varphi(x, 0) = x^2, x^2 = \bar{\varphi} \Rightarrow x = \sqrt{\bar{\varphi}}.$$

Demak, izlanayotgan yechim

$$z = \varphi(\sqrt{\bar{\varphi}}) = \varphi(\sqrt{x^2 + y^2}).$$

927. $x \frac{\partial z}{\partial x} + y \frac{\partial z}{\partial y} = z$ tenglamaning umumiy yechimini toping.

Yechish. $\frac{dx}{x} = \frac{dy}{y} = \frac{dz}{z}$ sistemaning yechimini topamiz.

$$\frac{dx}{x} = \frac{dy}{y} \Rightarrow \int \frac{dx}{x} = \int \frac{dy}{y} + \ln C \Rightarrow \ln x = \ln y + \ln C \Rightarrow$$

$$\Rightarrow x = yC \Rightarrow \frac{y}{x} = C_1, \frac{dx}{x} = \frac{dz}{z} \Rightarrow \frac{z}{x} = C_2.$$

U holda (5) ko'rinishdagi umumiy yechim quyidagi ko'rinishda bo'ladi:

$$\Phi\left(\frac{y}{x}, \frac{z}{x}\right) = 0.$$

928. $x_1 \frac{\partial z}{\partial x_1} + x_2 \frac{\partial z}{\partial x_2} + \dots + x_n \frac{\partial z}{\partial x_n} = 0$ tenglamaning umumiy yechimi mini toping.

Yechish. Mos oddiy differensial tenglamalar sistemasini tuzamiz:

$$\frac{dx_1}{x_1} = \frac{dx_2}{x_2} = \dots = \frac{dx_n}{x_n}$$

Bu sistemaning yechimi 927-misoldagini kabi

$$\frac{x_1}{x_n} = C_1, \frac{x_2}{x_n} = C_2, \dots, \frac{x_{n-1}}{x_n} = C_{n-1}, (x_n \neq 0)$$

ko'rinishda bo'ladi. Berilgan tenglamaning umumiy yechimi quyidagicha bo'ladi:

$$f = \Psi\left(\frac{x_1}{x_n}, \frac{x_2}{x_n}, \dots, \frac{x_{n-1}}{x_n}\right)$$

929. $yz \frac{\partial z}{\partial x} + xz \frac{\partial z}{\partial y} = -2xy$ tenglamani qanoatlantiruvchi va $x^2 + y^2 = 16$, $z=3$ aylanadan o'tuvchi yechimni toping.

Yechish. Tenglamaga mos oddiy differensial tenglamalar sistemasini tuzamiz.

$$\frac{dx}{yz} = \frac{dy}{xz} = -\frac{dz}{2xy} \Rightarrow xdx = ydy, 2xdx = -zdz.$$

Har ikki tenglamani integrallab, quyidagini hosil qilamiz:

$$x^2 - y^2 = C_1, x^2 + \frac{z^2}{2} = C_2.$$

Tenglamaning umumiy yechimi:

$$x^2 + \frac{z^2}{2} = \psi(x^2 - y^2). \quad (6)$$

(6) sirt tenglamasidan $x^2 + y^2 = 16$, $z=3$ aylana orqali o'tadiganini ajratamiz. Buning uchun (6) ga $x^2 = 16 - y^2$, $z=3$ tenglikni olib borib qo'yamiz. U holda

$$16 - y^2 + \frac{9}{2} = \psi(16 - 2y^2) \Rightarrow 16 - 2y^2 = t \Rightarrow y^2 = 8 - \frac{t}{2},$$

$$\psi(t) = \frac{t+25}{2} \Rightarrow \psi(x^2 - y^2) = \frac{x^2 - y^2 + 25}{2}.$$

Bundan foydalanib, (6) tenglamani quyidagi ko'rinishda yozamiz:

$$x^2 + \frac{z^2}{2} = \frac{x^2 - y^2 + 25}{2} \Rightarrow x^2 + y^2 + z^2 = 25.$$

Demak, radiusi 5 ga teng bo'lgan sfera ekan.

930. $\frac{\partial z}{\partial x}(1 + \sqrt{z - x - y}) + \frac{\partial z}{\partial y} = 2$ tenglamaning umumiy yechimini toping.

Yechish. Mos oddiy differensial tenglamalar sistemasini tuzamiz:

$$\frac{dx}{1 + \sqrt{z - x - y}} = \frac{dy}{1} = \frac{dz}{2} \Rightarrow z - 2y = C_1,$$

$$\frac{dy}{1} = \frac{dz - dx - dy}{-\sqrt{z - x - y}} \Rightarrow y + 2\sqrt{z - x - y} = C_2.$$

Umumiy yechim quyidagi ko'rinishda bo'ladi:

$$\Phi(z - 2y, y + 2\sqrt{z - x - y}) = 0.$$

Quyidagi tenglamalarning umumiy integralini toping

$$931. y \frac{\partial z}{\partial x} + x \frac{\partial z}{\partial y} = 0.$$

$$932. xz \frac{\partial z}{\partial x} + yz \frac{\partial z}{\partial y} = x.$$

$$933. x_1 \frac{\partial u}{\partial x_1} + x_2 \frac{\partial u}{\partial x_2} + \frac{x_1}{2} \frac{\partial u}{\partial x_3} = 0.$$

$$934. \sin x \frac{\partial z}{\partial x} + \sin y \frac{\partial z}{\partial y} = \sin z.$$

$$935. yz \frac{\partial z}{\partial x} + xz \frac{\partial z}{\partial y} = xy.$$

$$936. x \frac{\partial z}{\partial x} + y \frac{\partial z}{\partial y} = 0.$$

$$937. yz \frac{\partial u}{\partial x} + xz \frac{\partial u}{\partial y} + xy \frac{\partial u}{\partial z} = 0.$$

$$938. (x_1 - a_1) \frac{\partial v}{\partial x_1} + (x_2 - a_2) \frac{\partial v}{\partial x_2} + \dots + (x_n - a_n) \frac{\partial v}{\partial x_n} + (u - \alpha) \frac{\partial v}{\partial u} = 0.$$

$$939. \frac{1}{x} \frac{\partial z}{\partial x} + \frac{1}{y} \frac{\partial z}{\partial y} = 4 \text{ tenglamani qanoatlantiruvchi va } y^2 = z, \quad x = 0$$

parabola orqali o'tuvchi sirtni toping.

$$940*. \sqrt{x} \frac{\partial f}{\partial x} + \sqrt{y} \frac{\partial f}{\partial y} + \sqrt{z} \frac{\partial f}{\partial z} = 0 \text{ tenglamani qanoatlantiruvchi va}$$

$f = y - z, \quad x = 1$ orqali o'tuvchi sirtni toping.

58-§. O'zgarmas koeffitsiyentli ikkinchi tartibli xususiy hosilali tenglamalarni kanonik ko'rinishga keltirish

Quyidagi ikkinchi tartibli xususiy hosilali tenglamani qaraymiz:

$$a \frac{\partial^2 u}{\partial x^2} + 2b \frac{\partial^2 u}{\partial x \partial y} + c \frac{\partial^2 u}{\partial y^2} + F \left(x, y, z, \frac{\partial u}{\partial x}, \frac{\partial u}{\partial y} \right) = 0, \quad (7)$$

bu yerda a, b, c o'zgarmas son yoki x, y ning funksiyalari.

Agar biror D sohada $b^2 - ac > 0$ bo'lsa, (7) tenglama giperbolik tipga tegishli bo'lib, u **to'lqin tarqalish** yoki **tor tebranish** jarayonlarini ifodalaydi va quyidagi ko'rinishda bo'ladi:

$$\frac{\partial^2 u}{\partial x \partial y} = F \left(x, y, z, \frac{\partial u}{\partial x}, \frac{\partial u}{\partial y} \right) \text{ yoki } \frac{\partial^2 u}{\partial y^2} - a^2 \frac{\partial^2 u}{\partial x^2} = 0. \quad (8)$$

Agar biror D sohada $b^2 - ac = 0$ bo'lsa, (7) tenglama **parabolik** tipga tegishli bo'lib, u **issiqlik tarqalish** jarayonlarini ifodalaydi va quyidagi ko'rinishda bo'ladi:

$$\frac{\partial u}{\partial y} - a^2 \frac{\partial^2 u}{\partial x^2} = 0. \quad (8)$$

Agar biror D sohada $b^2 - ac < 0$ bo'lsa, (7) tenglama **elliptik** tipga tegishli bo'lib, u **stasionar issiqlik holati** jarayonlarini ifodalaydi va quyidagi ko'rinishda bo'ladi:

$$\frac{\partial^2 u}{\partial y^2} + a^2 \frac{\partial^2 u}{\partial x^2} = 0. \quad (10)$$

(7) tenglamaning **xarakteristik tenglamasi** deb, quyidagi ko'rinishdagi oddiy differensial tenglamaga aytildi:

$$a(dy)^2 - 2b dxdy + c(dx)^2 = 0. \quad (11)$$

Giperbolik tipdagagi tenglama uchun (11) xarakteristik tenglama ikkita $\varphi(x, y) = C_1$, $\psi(x, y) = C_2$ integralga ega bo'ladi, u $\xi = \varphi(x, y)$, $\eta = \psi(x, y)$ almashtirishlar yordamida kanonik ko'rinishga keltiriladi.

Parabolik tipdagagi tenglama uchun (11) xarakteristik tenglama integrallari ikki karrali bo'ladi va $\varphi(x, y) = C_1$ kelib chiqadi, u $\xi = \varphi(x, y)$ almashtirish yordamida kanonik ko'rinishga keltiriladi, bunda $\psi(x, y)$ funksiyani $\begin{vmatrix} \xi_x & \xi_y \\ \eta_x & \eta_y \end{vmatrix} \neq 0$ shartni qanoatlantiruvchi ixtiyoriy funksiya sifatida tanlanadi.

Elliptik tipdagı tenglama uchun (11) xarakteristik tenglama ikkita $\varphi(x,y) \pm i\psi(x,y) = C_{1,2}$ integralga ega bo'ladı, u $\xi = \varphi(x,y)$, $\eta = \psi(x,y)$ almashtirish yordamida kanonik ko'rinishga keltiriladi.

$$\xi = \varphi(x,y), \quad \eta = \psi(x,y). \quad (12)$$

(12) almashtirish orqali xususiy hosilalarni hisoblaymiz:

$$\begin{aligned} u_x &= u_\xi \xi_x + u_\eta \eta_x, \quad u_y = u_\xi \xi_y + u_\eta \eta_y, \\ u_{xx} &= u_{\xi\xi} \xi_x^2 + 2u_{\eta\xi} \eta_x \xi_x + u_{\eta\eta} \eta_x^2 + u_\xi \xi_{xx} + u_\eta \eta_{xx}, \\ u_{yy} &= u_{\xi\xi} \xi_y \xi_y + u_{\xi\eta} (\xi_x \eta_y + \xi_y \eta_x) + u_{\eta\eta} \eta_x \eta_y + u_\xi \xi_{yy} + u_\eta \eta_{yy}, \\ u_{xy} &= u_{\xi\xi} \xi_x^2 + 2u_{\eta\xi} \eta_x \xi_y + u_{\eta\eta} \eta_x^2 + u_\xi \xi_{xy} + u_\eta \eta_{xy}. \end{aligned} \quad (13)$$

(13) ni (7) ga qo'ysak, quyidagi tenglamaga kelamiz:

$$\bar{a}u_{\xi\xi} + 2\bar{b}u_{\xi\eta} + \bar{c}u_{\eta\eta} + F(\xi, \eta, u, u_\xi, u_\eta) = 0 \quad (14)$$

bu yerda

$$\begin{aligned} \bar{a} &= a\xi_x^2 + 2b\xi_x \xi_y + c\xi_y^2, \\ \bar{b} &= a\xi_x \eta_x + 2b(\xi_x \eta_y + \xi_y \eta_x) + c\xi_y \eta_y, \\ \bar{c} &= a\eta_x^2 + 2b\eta_x \eta_y + c\eta_y^2. \end{aligned}$$

(14) tenglama $\bar{a}, \bar{b}, \bar{c}$ koeffitsiyentlardan bittasi yoki ikkitasining nolga aylanishiga qarab turlarga ajraladi.

941. $x^2 \frac{\partial^2 u}{\partial x^2} - y^2 \frac{\partial^2 u}{\partial y^2} = 0$ tenglamani kanonik ko'rinishga keltiring.

Yechish. Tenglamada $a = x^2$, $b = 0$, $c = -y^2 \Rightarrow b^2 - ac = x^2 y^2 > 0$.

Demak, berilgan tenglama giperbolik tipga tegishli ekan.

Xapakteristik tenglamani tuzamiz:

$$x^2(dy)^2 - y^2(dx)^2 = 0 \Rightarrow (xdy - ydx)(xdy + ydx) = 0,$$

$$xdy + ydx = 0 \Rightarrow \frac{dy}{y} + \frac{dx}{x} = \ln C_1 \Rightarrow xy = C_1 \Rightarrow \xi = xy,$$

$$xdy - ydx = 0 \Rightarrow \frac{dy}{y} - \frac{dx}{x} = \ln C_2 \Rightarrow \frac{y}{x} = C_2 \Rightarrow \eta = \frac{y}{x}.$$

Xususiy hosilalarni hisoblaymiz:

$$\xi_x = y, \quad \xi_y = x, \quad \xi_{xx} = 0, \quad \xi_{xy} = 1, \quad \xi_{yy} = 0,$$

$$\eta_x = -\frac{y}{x^2}, \quad \eta_y = \frac{1}{x}, \quad \eta_{xx} = \frac{2y}{x^3}, \quad \eta_{xy} = -\frac{1}{x^2}, \quad \eta_{yy} = 0.$$

Hosilalarni (13) ga qo'ysak:

$$\frac{\partial^2 u}{\partial x^2} = u_{xx} y^2 - 2u_{x\eta} \frac{y^2}{x^2} + u_{\eta\eta} \cdot \frac{y^2}{x^4} + 2u_\eta \cdot \frac{y}{x^3}, \quad \frac{\partial^2 u}{\partial y^2} = u_{xx} \cdot x^2 + 2u_{x\eta} + u_{\eta\eta} \cdot \frac{1}{x^2}.$$

Natijalarini berilgan tenglamaga qo'yib, quyidagini hosil qilamiz:

$$x^2 \left(u_{xx} y^2 - 2u_{x\eta} \frac{y^2}{x^2} + u_{\eta\eta} \cdot \frac{y^2}{x^4} + 2u_\eta \cdot \frac{y}{x^3} \right) - y^2 \left(u_{xx} \cdot x^2 + 2u_{x\eta} + u_{\eta\eta} \cdot \frac{1}{x^2} \right) = 0,$$

$$-4u_{x\eta} \cdot y^2 + 2u_\eta \cdot \frac{y}{x} = 0 \Rightarrow u_{x\eta} - \frac{1}{2}u_\eta \cdot \frac{1}{xy} = 0 \Rightarrow u_{x\eta} - \frac{1}{2\xi}u_\eta = 0.$$

$$942. \quad \sin^2 x \frac{\partial^2 u}{\partial x^2} - 2y \sin x \frac{\partial^2 u}{\partial x \partial y} + y^2 \frac{\partial^2 u}{\partial y^2} = 0 \quad \text{tenglamani kanonik}$$

ko'rinishga keltiring.

Yechish. Tenglamada $a = \sin^2 x$, $b = -y \sin x$, $c = y^2$ diskriminantni hisoblaymiz: $b^2 - ac = y^2 \sin^2 x - y^2 \sin^2 x = 0$. Demak, berilgan tenglama parabolik tipga tegisli ekan.

Xapakteristik tenglamani tuzamiz:

$$\sin^2 x (dy)^2 + 2y \sin x dxdy + y^2 (dx)^2 = 0 \Rightarrow (\sin x dy + y dx)^2 = 0.$$

$$\sin x dy + y dx = 0 \Rightarrow \frac{dy}{y} + \frac{dx}{\sin x} = 0 \Rightarrow \ln y + \ln \operatorname{tg} \frac{x}{2} = \ln C \Rightarrow y \operatorname{tg} \frac{x}{2} = C.$$

O'zgaruvchilarni almashtiramiz: $\xi = y \operatorname{tg} \frac{x}{2}$, $\eta = y$. Xususiy hoslalarni topib,

$$\xi_x = -\frac{y}{2 \cos^2 \frac{x}{2}}, \quad \xi_y = \operatorname{tg} \frac{x}{2}, \quad \xi_{xx} = \frac{y}{2} \frac{\operatorname{tg} \frac{x}{2}}{2 \cos^2 \frac{x}{2}}, \quad \xi_{yy} = -\frac{1}{2 \cos^2 \frac{x}{2}}, \quad \xi_{xy} = 0,$$

$$\eta_x = 0, \quad \eta_y = 1, \quad \eta_{xx} = 0, \quad \eta_{yy} = 0, \quad \eta_{xy} = 0,$$

$$\frac{\partial^2 u}{\partial x^2} = \frac{1}{4} u_{xx} y^2 \sec^4 \frac{x}{2} + \frac{1}{2} y u_\xi \sec^2 \frac{x}{2} \operatorname{tg} \frac{x}{2}; \quad \frac{\partial^2 u}{\partial y^2} = u_{xx} \operatorname{tg}^2 \frac{x}{2} + 2u_{x\eta} \operatorname{tg} \frac{x}{2} + u_{\eta\eta},$$

$$\frac{\partial^2 u}{\partial x \partial y} = \frac{1}{2} \left(u_{x\eta} \operatorname{tg} \frac{x}{2} + u_{\eta\eta} \right) y \sec^2 \frac{x}{2} + \frac{1}{2} u_\xi \sec^2 \frac{x}{2},$$

ularni tenglamaga qo'yamiz:

$$\begin{aligned} \frac{1}{4} u_{xx} y^2 \sec^4 \frac{x}{2} \sin^2 x + \frac{1}{2} y u_\xi \sec^2 \frac{x}{2} \sin^2 x - \left(u_{xx} \operatorname{tg} \frac{x}{2} + u_{x\eta} \right) y^2 \sec^2 \frac{x}{2} \sin x - \\ - u_\xi y \sec^2 \frac{x}{2} \sin x + y^2 \left(u_{xx} \operatorname{tg}^2 \frac{x}{2} + 2u_{x\eta} \operatorname{tg} \frac{x}{2} + u_{\eta\eta} \right) = 0. \end{aligned}$$

Soddalashtiramiz

$$\frac{1}{2}yu_{\xi\xi}\sec^2\frac{x}{2}\operatorname{tg}\frac{x}{2}\sin^2x+y^2u_{\eta\eta}-u_{\xi}y\sec^2\frac{x}{2}\sin x=0 \Rightarrow yu_{\eta\eta}=u_{\xi}\sin x,$$

endi quyidagi almashtirishni bajaramiz:

$$\operatorname{tg}\frac{x}{2}=\frac{\xi}{\eta} \Rightarrow \sin x=\frac{\operatorname{tg}(x/2)}{1+\operatorname{tg}^2(x/2)}=\frac{2\xi\eta}{\xi^2+\eta^2}.$$

U holda tenglama quyidagi ko‘rinishda bo‘ladi:

$$u_{\eta\eta}-\frac{2\xi\eta}{\xi^2+\eta^2}u_{\xi}=0.$$

Bu tenglama berilgan tenglamaning kanonik ko‘rinishi bo‘ladi.

943. $\frac{\partial^2 u}{\partial x^2}-2\frac{\partial^2 u}{\partial x\partial y}+2\frac{\partial^2 u}{\partial y^2}=0$ tenglamani kanonik ko‘rinishga keltiring.

Yechish. Tenglamada $a=1, b=-1, c=2 \Rightarrow b^2-ac=1-2=-1<0$.

Demak, berilgan tenglama elliptik tipga tegisli ekan.

Xapakteristik tenglamani tuzamiz:

$$(dy)^2+2dxdy+2(dx)^2=0 \Rightarrow (y')^2+2y'+2=0 \Rightarrow y'=-1\pm i \Rightarrow$$

$$y+x-ix=C_1, \quad y+x+ix=C_2 \Rightarrow \xi=x+y, \quad \eta=x.$$

Xususiy hosilalarni hisoblaymiz:

$$\xi_x=1, \quad \xi_y=1, \quad \xi_{xx}=0, \quad \xi_{xy}=0, \quad \xi_{yy}=0,$$

$$\eta_x=1, \quad \eta_y=0, \quad \eta_{xx}=0, \quad \eta_{xy}=0, \quad \eta_{yy}=0,$$

$$\frac{\partial^2 u}{\partial x^2}=u_{\xi\xi}+2u_{\xi\eta}+u_{\eta\eta}, \quad \frac{\partial^2 u}{\partial x\partial y}=u_{\xi\xi}+u_{\xi\eta}, \quad \frac{\partial^2 u}{\partial y^2}=u_{\eta\eta}.$$

Natijalarni (13) ga qo‘yib, quyidagi tenglamani hosil qilamiz:

$$u_{\xi\xi}+2u_{\xi\eta}+u_{\eta\eta}-2u_{\xi\xi}-2u_{\xi\eta}+2u_{\eta\eta}=0 \Rightarrow u_{\eta\eta}+u_{\eta\eta}=0.$$

Quyidagi tenglamalarni kanonik ko‘rinishga keltiring

$$944. x^2\frac{\partial^2 u}{\partial x^2}+2xy\frac{\partial^2 u}{\partial x\partial y}+y^2\frac{\partial^2 u}{\partial y^2}=0.$$

$$945. \frac{\partial^2 u}{\partial x^2}-4\frac{\partial^2 u}{\partial x\partial y}-3\frac{\partial^2 u}{\partial y^2}-2\frac{\partial u}{\partial x}+6\frac{\partial u}{\partial y}=0.$$

$$946. \frac{1}{x^2}\frac{\partial^2 u}{\partial x^2}+\frac{1}{y^2}\frac{\partial^2 u}{\partial y^2}=0.$$

$$947. \frac{\partial^2 u}{\partial x^2}-2\frac{\partial^2 u}{\partial x\partial y}+\frac{\partial^2 u}{\partial y^2}-\frac{\partial u}{\partial x}+\frac{\partial u}{\partial y}=0.$$

$$948. \frac{\partial^2 u}{\partial x^2}-2\frac{\partial^2 u}{\partial x\partial y}+10\frac{\partial^2 u}{\partial y^2}=0.$$

$$949. (1+x^2) \frac{\partial^2 u}{\partial x^2} + (1+y^2) \frac{\partial^2 u}{\partial y^2} = 0.$$

$$950. \frac{\partial^2 u}{\partial x^2} - 6 \frac{\partial^2 u}{\partial x \partial y} + 9 \frac{\partial^2 u}{\partial y^2} - \frac{\partial u}{\partial x} + 2 \frac{\partial u}{\partial y} = 0.$$

$$951. \frac{\partial^2 u}{\partial x^2} + 4 \frac{\partial^2 u}{\partial x \partial y} + 5 \frac{\partial^2 u}{\partial y^2} + \frac{\partial u}{\partial x} + 2 \frac{\partial u}{\partial y} = 0.$$

$$952. \frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial x \partial y} - 2 \frac{\partial^2 u}{\partial y^2} - 3 \frac{\partial u}{\partial x} - 15 \frac{\partial u}{\partial y} = 0.$$

$$953. \frac{\partial^2 u}{\partial x^2} - 4 \frac{\partial^2 u}{\partial x \partial y} + 3 \frac{\partial^2 u}{\partial y^2} - 3 \frac{\partial u}{\partial x} + 9 \frac{\partial u}{\partial y} = 0.$$

$$954*. (1+x^2)^2 \frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} + 2x(1+x^2) \frac{\partial u}{\partial x} = 0.$$

$$955*. \frac{\partial^2 u}{\partial x^2} - 2 \sin x \frac{\partial^2 u}{\partial x \partial y} + (2 - \cos^2 x) \frac{\partial^2 u}{\partial y^2} - \cos x \frac{\partial u}{\partial y} = 0.$$

59-§. To'lqin tarqalish tenglamasiga Koshi masalasi. Dalamber formulasi

$$D = \{(x, y) : -\infty < x < +\infty, 0 < y < l\}, \quad l > 0 \text{ sohada}$$

$$\frac{\partial^2 u}{\partial y^2} - a^2 \frac{\partial^2 u}{\partial x^2} = 0 \quad (15)$$

bir jinsli to'lqin tarqalish tenglamasi berilgan bo'lsin.

Koshi masalasi. (15) tenglamani va quyidagi boshlang'ich shartlarni

$$u(x, 0) = \varphi(x), \quad \frac{\partial u(x, 0)}{\partial y} = \psi(x), \quad (16)$$

qanoatlantiruvchi yechimi topilsin.

Koshi masalasining yechimi quyidagi Dalamber formulasi orqali topiladi:

$$u(x, y) = \frac{\varphi(x+ay) + \varphi(x-ay)}{2} + \frac{1}{2a} \int_{-ay}^{ay} \psi(z) dz. \quad (17)$$

Ushbu

$$\frac{\partial^2 u}{\partial y^2} - a^2 \frac{\partial^2 u}{\partial x^2} = g(x, y) \quad (18)$$

bir jinsli bo'lmagan to'lqin tarqalish tenglamasi berilgan fiziksin.

Bir jinsli bo'lmagan (18) tenglama uchun Kochi matematikning yechimi quyidagi formula orqali topiladi:

$$u(x, y) = \frac{\varphi(x+ay) + \varphi(x-ay)}{2} + \frac{1}{2a} \int_{y-ay}^{x+ay} \psi(z) dz + \frac{1}{2a} \int_0^y \left(\int_{x-ay}^{x+ay} z \psi(z, t) dz \right) dt. \quad (19)$$

956. $\frac{\partial^2 u}{\partial y^2} - \frac{\partial^2 u}{\partial x^2} = 0$ tenglamaning $u|_{y=0} = x^2$, $\left. \frac{\partial u}{\partial y} \right|_{y=0} = 0$ shartlarini qanoatlantiruvchi yechimini toping.

Yechish. Tenglamada $a=1$, $\varphi(x)=x^2$, $\psi(x)=0$ (17) formulasi asosan

$$u(x, y) = \frac{\varphi(x+ay) + \varphi(x-ay)}{2} + \frac{1}{2a} \int_{y-ay}^{x+ay} \psi(z) dz = \frac{(x+y)^2 + (x-y)^2}{2} = x^2 + y^2.$$

957. $\frac{\partial^2 u}{\partial y^2} - 4 \frac{\partial^2 u}{\partial x^2} = 0$ tenglamaning $u|_{y=0} = 0$, $\left. \frac{\partial u}{\partial y} \right|_{y=0} = x$ shartlarini qanoatlantiruvchi yechimini toping.

Yechish. Tenglamada $a=2$, $\varphi(x)=0$, $\psi(x)=x$ (17) formulasi asosan:

$$u(x, y) = \frac{1}{4} \int_{x-2y}^{x+2y} zdz = \frac{1}{8} z^2 \Big|_{x-2y}^{x+2y} = \frac{(x+2y)^2 - (x-2y)^2}{8} = xy.$$

958. $\frac{\partial^2 u}{\partial y^2} - a^2 \frac{\partial^2 u}{\partial x^2} = 0$ tenglamaning $u|_{y=0} = \sin x$, $\left. \frac{\partial u}{\partial y} \right|_{y=0} = 1$ shartlarini qanoatlantiruvchi yechimini $y = \frac{\pi}{2a}$ momentdagi qiymatini toping.

Yechish. Tenglamada $a=a$, $\varphi(x)=\sin x$, $\psi(x)=1$ (17) formulasi asosan:

$$\begin{aligned} u(x, y) &= \frac{\sin(x+ay) + \sin(x-ay)}{2} + \frac{1}{2a} \int_{y-ay}^{x+ay} 1 dz = \sin x \cos ay + \frac{1}{2a} z \Big|_{y-ay}^{x+ay} = \\ &= \sin x \cos ay + y \Rightarrow u\left(x, \frac{\pi}{2a}\right) = \sin x \cos\left(x \cdot \frac{\pi}{2a}\right) + \frac{\pi}{2a} = \frac{\pi}{2a}. \end{aligned}$$

959. $\frac{\partial^2 u}{\partial y^2} = \frac{\partial^2 u}{\partial x^2} + x$ tenglamaning $u|_{y=0} = \cos x$, $\left. \frac{\partial u}{\partial y} \right|_{y=0} = \sin x$ shartlarini qanoatlantiruvchi yechimini toping.

Yechish. Tenglamada $a=1$, $\varphi(x)=\cos x$, $\psi(x)=\sin x$, $g(x,y)=x$

(19) formulaga asosan:

$$\begin{aligned} u(x,y) &= \frac{\cos(x+y) + \cos(x-y)}{2} + \frac{1}{2} \int_{x-y}^{x+y} \sin zdz + \frac{1}{2} \int_0^y \left(\int_{x-(y-\tau)}^{x+\tau} zdz \right) d\tau = \\ &= \cos x \cos y - \frac{1}{2} \cos z \Big|_{x-y}^{x+y} + \frac{1}{2} \int_0^y \frac{z^2}{2} \Big|_{x-y+\tau}^{x+y-\tau} d\tau = \cos x \cos y - \sin x \sin y + \\ &+ \int_0^y (xy - x\tau) d\tau = \cos(x+y) + \left(xy\tau - \frac{1}{2} x\tau^2 \right) \Big|_{\tau=0}^{x+y} = \cos(x+y) + \frac{1}{2} xy^2. \end{aligned}$$

To'lqin tarqalish tenglamasi uchun Koshi masalasini yeching

960. $\frac{\partial^2 u}{\partial y^2} - \frac{\partial^2 u}{\partial x^2} = 0$ tenglamaning $u|_{y=0} = x$, $\frac{\partial u}{\partial y} \Big|_{y=0} = -x$ shartlarni

qanoatlantiruvchi yechimini toping.

$$969. \frac{\partial^2 u}{\partial y^2} = 9 \frac{\partial^2 u}{\partial x^2} + 2x \quad \text{tenglamaning} \quad u|_{y=0} = x, \quad \left. \frac{\partial u}{\partial y} \right|_{y=0} = \sin x \quad \text{shartlarni}$$

qanoatlantiruvchi yechimini toping.

$$970. \frac{\partial^2 u}{\partial y^2} = 16 \frac{\partial^2 u}{\partial x^2} + 2y \quad \text{tenglamaning} \quad u|_{y=0} = x, \quad \left. \frac{\partial u}{\partial y} \right|_{y=0} = \cos x \quad \text{shart-}$$

larni qanoatlantiruvchi yechimini toping.

60-§. Tor tebranish tenglamasiga qo'yilgan masalani Furye usulida yechish

$$D = \{(x, y) : 0 < x < l, 0 < y < p\}, \quad p, l > 0 \quad \text{sohada}$$

$$\frac{\partial^2 u}{\partial y^2} = a^2 \frac{\partial^2 u}{\partial x^2} \quad (20)$$

bir jinsli tor tebranish tenglamasi berilgan bo'lsin.

1. Birinchi chegaraviy masala. (20) tenglamani hamda quyidagi boshlang'ich

$$u(x, 0) = \varphi(x), \quad \left. \frac{\partial u}{\partial y} \right|_{y=0} = \psi(x) \quad (21)$$

va chegaraviy

$$u(0, y) = 0, \quad u(l, y) = 0 \quad (22)$$

shartlarni qanoatlantiruvchi yechimi topilsin.

Masalada chegaraviy shartlarning qiymatlarini nol deb olinishi torming ikki chetlarini mahkamlanganligini anglatadi.

Yechish. Qo'yilgan masalaning yechimini noldan farqli bo'lgan

$$u(x, y) = X(x)Y(y) \quad (23)$$

ko'paytma shaklida qidiramiz. Bu usulni birinchi bo'lib qo'llagan olim nomi bilan **Furye usuli** deb ham ataladi.

(23) ning hisoblarini hisoblab, (20) ga qo'ysak:

$$X(x)Y''(y) = a^2 X''(x)Y(y) \Rightarrow \frac{Y''(y)}{a^2 Y(y)} = \frac{X''(x)}{X(x)}$$

tenglik hosil bo'ladi. Tenglikning chap tomoni faqat y o'zgaruvchiga, o'ng tomoni esa faqat x o'zgaruvchiga bog'liq. Ularning har ikkisi faqat bitta o'zgarmas songa teng bo'lgandagina tenglik bajariladi. Bu o'zgarmas son $-\lambda$, ($\lambda > 0$) bo'lsin, u holda quyidagi oddiy differensial tenglamalarni hosil qilamiz:

$$\frac{Y''(y)}{a^2 Y(y)} = \frac{X''(x)}{X(x)} = -\lambda, \Rightarrow X''(x) + \lambda X(x) = 0, Y''(x) + \lambda Y(x) = 0.$$

$X(x)$ ga nisbatan tenglanan yechimi bilan shug'ullanamiz.

(22) chegaraviy shartlarni e'tiborga olib

$$\begin{cases} X''(x) + \lambda X(x) = 0, \\ X(0) = X(l) = 0, \end{cases} \quad (24)$$

masalani hosil qilamiz. Bu masalani Shturm-Liuvilli masalasi deb nomlanadi. Xarakteristik tenglamasini tuzamiz:

$$k^2 + \lambda = 0 \Rightarrow k_{1,2} = \sqrt{\lambda}i$$

U holda umumiy yechim quyidagi ko'rinishda bo'ladi:

$$X(x) = A \cos \sqrt{\lambda}x + B \sin \sqrt{\lambda}x,$$

bunda A, B - ixtiyoriy o'zgarmas sonlar.

Chegaraviy shartlardan

$$X(0) = A = 0, X(l) = B \sin \sqrt{\lambda}l = 0 \Rightarrow B \neq 0, \Rightarrow \sin \sqrt{\lambda}l = 0 \Rightarrow$$

$$\sqrt{\lambda}l = n\pi, \quad \sqrt{\lambda} = \frac{n\pi}{l} \Rightarrow X(x) = B \sin \frac{n\pi}{l} x.$$

λ ning bu qiymati (24) masalaning xos qiymati,

$$X(x) = B \sin \frac{n\pi}{l} x$$

esa xos funksiyasi deb ataladi.

$Y(y)$ ning yechimini topish uchun λ ning qiymatini e'tiborga olib, quyidagi umumiy yechimni hosil qilamiz:

$$Y(y) = C \cos \frac{an\pi}{l} y + D \sin \frac{an\pi}{l} y,$$

bunda C, D ixtiyoriy o'zgarmas sonlar. Natijalarni (23) ga qo'ysak, quyidagi umumiy yechim hosil bo'ladi:

$$u_n(x, y) = \left(C_n \cos \frac{an\pi}{l} y + D_n \sin \frac{an\pi}{l} y \right) \sin \frac{nm\pi}{l} x, \quad n = 1, 2, \dots$$

(20) tenglama chiziqli va bir jinsli bo'lgani uchun uning yechimlari yig'indisi ham yechim bo'ladi, bundan unumiy yechim

$$u(x, y) = \sum_{n=1}^{\infty} \left(C_n \cos \frac{an\pi}{l} y + D_n \sin \frac{an\pi}{l} y \right) \sin \frac{nm\pi}{l} x. \quad (25)$$

ko'rinishda bo'ladi.

(25) funksiya (20) tenglamani va (22) shartni qanoatlantiradi. Agar (25) qatorning C_n, D_n koeffitsiyentlari shunday bo'lisa, qatorning o'zi va uning ikkinchi tartibli hosilzashidan nuzulgen qatorlar yaqinlashuvchi bo'lsa, (25) qator masalaning yechimi bo'ladi. (25) funksiya (21) boshlang'ich shartlarni qanoatlantiradi.

$$u(x, 0) = \sum_{n=1}^{\infty} C_n \sin \frac{an\pi}{l} x = \varphi(x).$$

Agar $\varphi(x)$ funksiya Furye qatoriga $(0, l)$ oraliqida sinus oragi yoyilsa, quyidagi formula o'rinali bo'ladi:

$$C_n = \frac{2}{l} \int_0^l \varphi(x) \sin \frac{n\pi}{l} x dx. \quad (26)$$

$$\frac{\partial u(x, 0)}{\partial y} = \sum_{n=1}^{\infty} \frac{an\pi}{l} D_n \sin \frac{an\pi}{l} x = \psi(x), \quad D_n = \frac{2}{an\pi} \int_0^l \psi(x) \sin \frac{n\pi}{l} x dx. \quad (27)$$

Shunday qilib, birinchi masalaning yechimi (25) formulasi bilan C_n, D_n koeffitsiyentlar esa (26) va (27) formulalar bilan uyilishi.

Izoh: agar o'zgarmas sonni

$$\frac{Y''(y)}{a^2 Y(y)} = \frac{X''(x)}{X(x)} = \lambda$$

deb tanlansa, hosil qilingan yechim (22) chegaraviy shartni lantirmaydi.

D sohada

$$\frac{\partial^2 u}{\partial y^2} = a^2 \frac{\partial^2 u}{\partial x^2} + g(x, y) \quad (28)$$

bir jinsli bo'limgan tor tebranish tenglamasi berilgan bo'lсин.

2. Birinchi chegaraviy masala. (28) tenglamani hamda quyidagi boshlang'ich:

$$u(x, 0) = \varphi(x), \quad \frac{\partial u(x, 0)}{\partial y} = \psi(x) \quad (29)$$

va chegaraviy:

$$u(0, y) = 0, \quad u(l, y) = 0 \quad (30)$$

shartlarni qanoatlantiruvchi yechimi topilsin.

(28) tenglama torni tashqi kuch ta'siridagi majburiy tebranishini, (30) shart esa torning ikki cheti mahkamlanganligini ifodalaydi.

Bu masalaning yechimi quyidagi formula yordamida topiladi:

$$u(x, y) = \sum_{n=1}^{\infty} \left(C_n \cos \frac{an\pi}{l} y + D_n \sin \frac{an\pi}{l} y \right) \sin \frac{an\pi}{l} x + \sum_{n=1}^{\infty} g_n(y) \sin \frac{n\pi}{l} x, \quad (31)$$

bu yerda

$$g_n(y) = \frac{l}{an\pi} \int_0^y g(\tau, y) \sin \frac{an\pi}{l} (y - \tau) d\tau. \quad (32)$$

973. Ikki cheti $x=0$ va $x=l$ da mahkamlangan, hamda dastlabki holatda $u = \frac{4h}{l^2} x(l-x)$ tenglik bilan aniqlanuvchi boshlang'ich tezlikka ega bo'limgan torning harakat tenglamasini toping.

Yechish. Bu masala

$$\frac{\partial^2 u}{\partial y^2} = a^2 \frac{\partial^2 u}{\partial x^2}, \quad y > 0, \quad 0 < x < l$$

tenglamani

$$u(x, 0) = \varphi(x) = \frac{4h}{l^2} x(l-x), \quad \frac{\partial u(x, 0)}{\partial y} = \psi(x) = 0, \quad 0 \leq x \leq l$$

boshlang'ich shartda va $u(0, y) = 0, u(l, y) = 0, y \geq 0$ chegaraviy shartlarda yechishga keladi.

Masalani yechimini Furye usulida

$$u(x, y) = X(x) \cdot Y(y)$$

ko'rinishda qidiramiz.

(25) formulaga asosan qidirilgan yechim

$$u(x, y) = \sum_{n=1}^{\infty} \left(C_n \cos \frac{an\pi}{l} y + D_n \sin \frac{an\pi}{l} y \right) \sin \frac{an\pi}{l} x$$

ko'rinishda bo'ladi. (26), (27) formula yordamida

$$C_n = \frac{2}{l} \int_0^l \varphi(x) \sin \frac{n\pi}{l} x dx = \frac{8h}{l^3} \int_0^l (lx - x^2) \sin \frac{n\pi x}{l} dx; \quad D_n = \frac{2}{n\pi a} \int_0^a 0 \sin \frac{n\pi x}{l} dx = 0.$$

C_n koeffitsiyentni topish uchun ikki marta bo'laklab integrallaymiz:

$$\begin{aligned}
C_n &= \frac{8h}{l^3} \int_0^l (lx - x^2) \sin \frac{n\pi x}{l} dx = \left| \begin{array}{l} u_1 = lx - x^2 \\ dv_1 = \sin \frac{n\pi x}{l} dx, \quad v_1 = -\frac{1}{n\pi} \cos \frac{n\pi x}{l} \end{array} \right| = \\
&= -\frac{8h}{l^3} (lx - x^2) \frac{1}{n\pi} \cos \frac{n\pi x}{l} \Big|_0^l + \frac{8h}{n\pi l^2} \int_0^l (l - 2x) \cos \cos \frac{n\pi x}{l} dx = \\
&= \frac{8h}{n\pi l^2} \int_0^l (l - 2x) \cos \frac{n\pi x}{l} dx = \left| \begin{array}{l} u_1 = l - 2x \\ dv_1 = \cos \frac{n\pi x}{l} dx, \quad v_1 = \frac{1}{n\pi} \sin \frac{n\pi x}{l} \end{array} \right| = \\
&= \frac{8h}{n^2 \pi^2 l} (l - 2x) \sin \frac{n\pi x}{l} \Big|_0^l + \frac{16h}{n^2 \pi^2 l} \int_0^l \sin \frac{n\pi x}{l} dx = -\frac{16h}{n^3 \pi^3} \cos \frac{n\pi x}{l} \Big|_0^l = \\
&= -\frac{16h}{n^3 \pi^3} (\cos n\pi - 1) = \frac{16h}{n^3 \pi^3} [1 - (-1)^n] = \begin{cases} 0, \text{ agar } n \text{ juft bo'lsa,} \\ \frac{32h}{(2n+1)^3 \pi^3}, \text{ agar } n \text{ toq bo'lsa.} \end{cases}
\end{aligned}$$

Natijani e'tiborga olsak, yechim quyidagi ko'rinishda bo'ldi:

$$u(x, y) = \frac{32h}{\pi^3} \sum_{n=1}^{\infty} \frac{1}{(2n+1)^3} \cos \frac{(2n+1)\pi ay}{l} \sin \frac{(2n+1)\pi ax}{l}.$$

974. Ikki cheti $x=0$ va $x=l$ da mahkamlangan hamda dastlabki siljishi $u(x, 0)=0$ ga teng, boshlang'ich tezligi

$$\frac{\partial u(x, 0)}{\partial y} = \begin{cases} v_0, & \left|x - \frac{l}{2}\right| < \frac{h}{2}, \quad v_0 = \text{const}, \\ 0, & \left|x - \frac{l}{2}\right| > \frac{h}{2}, \end{cases}$$

ga teng bo'lgan torning ixtiyoriy vaqttagi holatini aniqlang.

Yechish. Bu masala

$$\frac{\partial^2 u}{\partial y^2} = a^2 \frac{\partial^2 u}{\partial x^2}, \quad y > 0, \quad 0 < x < l$$

tenglamani

$$u(x, 0) = \varphi(x) = 0,$$

$$\frac{\partial u(x, 0)}{\partial y} = \psi(x) = v_0, \quad x \in \left(\frac{l-h}{2}; \frac{l+h}{2}\right), \quad \psi(x) = 0, \quad x \notin \left(\frac{l-h}{2}; \frac{l+h}{2}\right)$$

boshlang'ich shartlarda va

$$u(0, y) = 0, \quad u(l, y) = 0, \quad y \geq 0$$

cheagaraviy shartlarda yechishga keladi.

Masalaning yechimini Furye usulida yechib, (25) qatorni hosil qilamiz. Qator koeffitsiyentlarini topamiz. $C_n = 0$ chunki $\varphi(x) = 0$.

$$D_n = \frac{2}{n\pi a} \int_{(1-h)/2}^{(1+h)/2} v_0 \sin \frac{n\pi x}{l} dx = -\frac{2v_0}{n\pi a} \frac{1}{n\pi} \cos \frac{n\pi x}{l} \Big|_{(1-h)/2}^{(1+h)/2} = \\ = \frac{2v_0 l}{n^2 \pi^2 a} \left[\cos \frac{n\pi(1-h)}{2l} - \cos \frac{n\pi(1+h)}{2l} \right] = \frac{4v_0 l}{n^2 \pi^2 a} \sin \frac{n\pi}{2} \sin \frac{n\pi h}{2}.$$

Natijani e'tiborga olsak, yechim quyidagi ko'rinishda bo'ladi:

$$u(x, y) = \frac{4v_0 l}{a\pi^2} \sum_{n=1}^{\infty} \frac{1}{n^2} \sin \frac{n\pi}{2} \sin \frac{n\pi h}{2l} \sin \frac{n\pi ay}{l} \sin \frac{n\pi x}{l}.$$

975. Ikki cheti $x=0$ va $x=l$ da mahkamlangan hamda dastlabki holatda $u|_{x=0}=0$ shakliga ega. Boshlang'ich tezligi $\frac{\partial u(x, 0)}{\partial y}=0$ bo'lgan

$$\frac{\partial^2 u}{\partial y^2} = \frac{\partial^2 u}{\partial x^2} + y \sin x, \quad y > 0, \quad 0 < x < \pi$$

majburiy tebranuvchi torning ixtiyoriy vaqt dagi holatini aniqlang.

Yechish. Bu masalaning yechimini Furye usulida izlab, yechimni (31) ko'rinishda topamiz. $u(x, 0)=0$ va $\frac{\partial u(x, 0)}{\partial y}=0$ bo'lgani uchun $C_n = 0$, $D_n = 0$ bo'ladi. U holda berilgan masalaning yechimi:

$$u(x, y) = \sum_{n=1}^{\infty} Y_n(y) \sin \frac{n\pi}{l} x$$

ko'rinishda bo'ladi. Bu yerda

$$Y_n(y) = \frac{1}{n\pi} \int_0^{\pi} g_n(\tau) \sin \frac{n\pi}{l} (\tau - y) d\tau$$

va

$$g_n(\tau) = \frac{2}{l} \int_0^l g(\xi, \tau) \sin \frac{n\pi}{l} \xi d\xi.$$

Bundan masala shartiga ko'ra:

$$g_n(y) = \frac{2}{\pi} \int_0^{\pi} y \sin \xi \sin n\xi d\xi = |n=1| = \frac{2y}{\pi} \int_0^{\pi} \sin^2 \xi d\xi = \\ = \frac{2y}{\pi} \int_0^{\pi} \frac{1 - \cos 2\xi}{2} d\xi = \frac{y}{\pi} \left(\xi \Big|_0^{\pi} - \frac{1}{2} \sin 2\xi \Big|_0^{\pi} \right) = y.$$

Demak, berilgan masalaning yechimi:

$$u(x, y) = (y - \sin y) \sin x.$$

To'lqin tarqalish tenglamasiga qo'yilgan quyidagi masalarni Furge usulida yeching

976. Ikki cheti $x=0$ va $x=l$ da mahkamlangan hamda dastlabki holatda $u = h(x(x^4 - 2x^3 + x))$ tenglik bilan aniqlanuvchi va boshlang'ich tezlikka ega bo'limgan torning harakat tenglamasini toping.

977. Ikki cheti $x=0$ va $x=l$ da mahkamlangan hamda dastlabki siljishi $u(x,0)=0$ ga teng. Boshlang'ich tezligi

$$\frac{\partial u(x,0)}{\partial y} = \begin{cases} \cos \frac{\pi(x-1/2)}{h}, & \left|x-\frac{l}{2}\right| < \frac{h}{2}, \\ 0, & \left|x-\frac{l}{2}\right| > \frac{h}{2}, \end{cases}$$

ga teng bo'lgan torning ixtiyoriy vaqttagi holatini aniqlang.

$$978. \frac{\partial^2 u}{\partial y^2} = 4 \frac{\partial^2 u}{\partial x^2}, \quad y > 0, \quad 0 < x < l, \quad u(0,y) = 0, \quad u(l,y) = 0,$$

$$u(x,0) = \begin{cases} \frac{2\pi x}{l}, & 0 \leq x \leq \frac{l}{2}, \\ \frac{2\pi(l-x)}{l}, & \frac{l}{2} \leq x \leq l. \end{cases} \quad \frac{\partial u(x,0)}{\partial y} = 0.$$

$$979. \frac{\partial^2 u}{\partial y^2} = \frac{\partial^2 u}{\partial x^2}, \quad y > 0, \quad 0 < x < \pi, \quad u(0,y) = 0, \quad u(l,y) = 0,$$

$$u(x,0) = 0, \quad \frac{\partial u(x,0)}{\partial y} = \sin \frac{\pi}{l} x.$$

$$980. \frac{\partial^2 u}{\partial y^2} = \frac{\partial^2 u}{\partial x^2}, \quad y > 0, \quad 0 < x < l, \quad u(0,y) = 0, \quad u(l,y) = 0,$$

$$u(x,0) = \sin x, \quad \frac{\partial u(x,0)}{\partial y} = \sin x.$$

$$981. \frac{\partial^2 u}{\partial y^2} = \frac{\partial^2 u}{\partial x^2}, \quad y > 0, \quad 0 < x < l, \quad u(0,y) = 0, \quad u(l,y) = 0,$$

$$u(x,0) = \sin \frac{5\pi}{l} x, \quad \frac{\partial u(x,0)}{\partial y} = 0.$$

$$982. \frac{\partial^2 u}{\partial y^2} = \frac{\partial^2 u}{\partial x^2}, \quad y > 0, \quad 0 < x < l, \quad u(0,y) = 0, \quad u(l,y) = y,$$

$$u(x,0) = 0, \quad \frac{\partial u(x,0)}{\partial y} = 0.$$

983. $\frac{\partial^2 u}{\partial y^2} = \frac{\partial^2 u}{\partial x^2}, \quad y > 0, \quad 0 < x < l, \quad u(0, y) = 0, \quad u(l, y) = C = \text{const},$

$$u(x, 0) = 0, \quad \frac{\partial u(x, 0)}{\partial y} = 0.$$

984. $\frac{\partial^2 u}{\partial y^2} = 4 \frac{\partial^2 u}{\partial x^2}, \quad y > 0, \quad 0 < x < 3, \quad u(0, y) = 0, \quad u(3, y) = 0,$

$$u(x, 0) = \frac{4h}{9} x(3 - x), \quad h > 0, \quad \frac{\partial u(x, 0)}{\partial y} = 0.$$

985. $\frac{\partial^2 u}{\partial y^2} = 9 \frac{\partial^2 u}{\partial x^2}, \quad y > 0, \quad 0 < x < l, \quad u(0, y) = 0, \quad u(l, y) = 0,$

$$u(x, 0) = 0, \quad \frac{\partial u(x, 0)}{\partial y} = \sin \frac{5\pi}{l} x.$$

986. $\frac{\partial^2 u}{\partial y^2} = \frac{\partial^2 u}{\partial x^2}, \quad y > 0, \quad 0 < x < \pi, \quad u(0, y) = 0, \quad u(\pi, y) = 0,$

$$u(x, 0) = \sin 7x, \quad \frac{\partial u(x, 0)}{\partial y} = 0.$$

987. $\frac{\partial^2 u}{\partial y^2} = 16 \frac{\partial^2 u}{\partial x^2}, \quad y > 0, \quad 0 < x < l, \quad u(0, y) = 0, \quad u(l, y) = 0,$

$$u(x, 0) = 0, \quad \frac{\partial u(x, 0)}{\partial y} = \sin \frac{2\pi}{l} x.$$

988. $\frac{\partial^2 u}{\partial y^2} = a^2 \frac{\partial^2 u}{\partial x^2} + b \sinh x, \quad y > 0, \quad 0 < x < l, \quad u(0, y) = 0, \quad u(l, y) = 0,$

$$u(x, 0) = 0, \quad \frac{\partial u(x, 0)}{\partial y} = 0.$$

989. $\frac{\partial^2 u}{\partial y^2} = a^2 \frac{\partial^2 u}{\partial x^2} + b x(x - l), \quad y > 0, \quad 0 < x < l, \quad u(0, y) = 0, \quad u(l, y) = 0,$

$$u(x, 0) = 0, \quad \frac{\partial u(x, 0)}{\partial y} = 0.$$

990*. $\frac{\partial^2 u}{\partial y^2} = \frac{\partial^2 u}{\partial x^2} + \sin \pi x, \quad y > 0, \quad 0 < x < l, \quad u(0, y) = 0, \quad u(l, y) = 0,$

$$u(x, 0) = 0, \quad \frac{\partial u(x, 0)}{\partial y} = 0.$$

991*. $\frac{\partial^2 u}{\partial y^2} = \frac{\partial^2 u}{\partial x^2} + (4y - 8)\sin 2x, \quad y > 0, \quad 0 < x < \pi, \quad u(0, y) = 0, \quad u(\pi, y) = 0,$

$$u(x,0)=0, \quad \frac{\partial u(x,0)}{\partial y}=0.$$

992.** $\frac{\partial^2 u}{\partial y^2} = \frac{\partial^2 u}{\partial x^2} + x(x-l)y^2, \quad y > 0, \quad 0 < x < l, \quad u(0,y) = 0, \quad u(l,y) = 0,$

$$u(x,0)=0, \quad \frac{\partial u(x,0)}{\partial y}=0.$$

61-§. Issiqlik tarqalish tenglamasiga qo'yilgan masalani Furye usulida yechish

1. $\frac{\partial u}{\partial y} = a^2 \frac{\partial^2 u}{\partial x^2}, \quad y > 0, \quad -\infty < x < +\infty, \quad u(x,0) = f(x)$ chegaralanmagan sterjenda issiqlik tarqalishi yoki Koshi masalasining yechimi quyidagi formula bilan topiladi

$$u(x,y) = \frac{1}{2a\sqrt{\pi}y} \int_{-\infty}^{+\infty} f(\xi) e^{-\frac{(x-\xi)^2}{4a^2y}} d\xi. \quad (33)$$

2. $\frac{\partial u}{\partial y} = a^2 \frac{\partial^2 u}{\partial x^2}, \quad y > 0, \quad x > 0, \quad u(x,0) = f(x), \quad u(0,y) = \varphi(y)$ bir

tomondan chegaralanmagan sterjenda issiqlik tarqalishi yoki Koshi masalasining yechimi quyidagi formula bilan topiladi:

$$u(x,y) = \frac{1}{2a\sqrt{\pi}y} \int_0^{+\infty} f(\xi) \left[e^{-\frac{(x-\xi)^2}{4a^2y}} - e^{-\frac{(x+\xi)^2}{4a^2y}} \right] d\xi - \frac{x}{2a\sqrt{\pi}} \int_0^y \varphi(\eta) e^{-\frac{x^2}{4a^2(y-\eta)}} \frac{d\eta}{(y-\eta)^{\frac{3}{2}}}. \quad (34)$$

3. $\frac{\partial u}{\partial y} = a^2 \frac{\partial^2 u}{\partial x^2}, \quad y > 0, \quad 0 < x < l, \quad u(x,0) = f(x), \quad u(0,y) = u(l,y) = 0,$

har ikki tomondan chegaralangan sterjenda birinchi chegaraviy masalaning yechimi quyidagi formula bilan topiladi:

$$u(x,y) = \sum_{n=1}^{\infty} b_n e^{-\frac{(n\pi y)^2}{l^2}} \sin \frac{n\pi x}{l}, \quad b_n = \frac{2}{l} \int_0^l f(x) \sin \frac{n\pi x}{l} dx. \quad (35)$$

$$4. \quad \frac{\partial u}{\partial y} = a^2 \frac{\partial^2 u}{\partial x^2}, \quad y > 0, \quad 0 < x < l, \quad u(x, 0) = f(x), \quad \frac{\partial u(0, y)}{\partial y} = \frac{\partial u(l, y)}{\partial y} = 0,$$

har ikki tomondan chegaralangan sterjenda ikkinchi chegaraviy masalaning yechimi quyidagi formula bilan topiladi:

$$u(x, y) = \sum_{n=1}^{\infty} a_n e^{-\left(\frac{n\pi x}{l}\right)^2 y} \cos \frac{n\pi x}{l} + a_0, \quad a_n = \frac{2}{l} \int_0^l f(x) \cos \frac{n\pi x}{l} dx. \quad (36)$$

$$5. \quad \frac{\partial u}{\partial y} = a^2 \frac{\partial^2 u}{\partial x^2} + g(x, y), \quad y > 0, \quad 0 < x < l, \quad u(x, 0) = f(x),$$

$u(0, y) = u(l, y) = 0$ har ikki tomondan teploizolatsiyalangan sterjenda bir jinsli bo'lmagan tenglamaga birinchi chegaraviy masalaning yechimi quyidagi formula bilan topiladi:

$$u(x, y) = \sum_{n=1}^{\infty} A_n e^{-\left(\frac{n\pi x}{l}\right)^2 y} \sin \frac{n\pi x}{l} + \sum_{n=1}^{\infty} Y_n(y) \sin \frac{n\pi x}{l}, \quad (37)$$

bu yerda

$$Y_n(y) = \int_0^y g_n(\tau) e^{-\left(\frac{n\pi x}{l}\right)(y-\tau)} d\tau. \quad A = \frac{2}{l} \int_0^l f(x) \sin \frac{n\pi x}{l} dx.$$

$$993. \quad \frac{\partial u}{\partial y} = a^2 \frac{\partial^2 u}{\partial x^2}, \quad y > 0, \quad -\infty < x < +\infty \text{ chegaralanmagan sterjenda}$$

issiqlikning dastlabki tarqalish qonuni quyidagicha bo'lsa,

$$u(x, 0) = f(x) = \begin{cases} u_0, & x \in (x_1, x_2), \\ 0, & x \notin (x_1, x_2) \end{cases}$$

masalaning yechimini toping.

Yechish. Sterjenning uzunligi cheksiz bo'lgani uchun bu masalaning yechimi (31) ko'rinishda topiladi. $[x_1, x_2]$ oraliqda u_0 ekanini e'tiborga olsak:

$$u(x, y) = \frac{u_0}{2a\sqrt{\pi y}} \int_{x_1}^{x_2} f(\xi) e^{-\frac{(x-\xi)^2}{4a^2 y}} d\xi.$$

Natijani Laplas funksiyasi – ehtimollik integrali

$$\Phi(z) = \frac{2}{\sqrt{\pi}} \int_0^z e^{-\mu^2} d\mu$$

orqali ifodalaymiz. Buning uchun

$$\mu = \frac{x-\xi}{2a\sqrt{y}}, \quad d\xi = -2a\sqrt{y}d\mu,$$

almashtirish bajarsak, quyidagi tenglikni olamiz:

$$u(x, y) = -\frac{u_0}{\sqrt{\pi}} \int_{(x-x_1)/2a\sqrt{y}}^{(x-x_2)/2a\sqrt{y}} e^{-\mu^2} d\mu = \frac{u_0}{\sqrt{\pi}} \left[\int_0^{(x-x_2)/2a\sqrt{y}} e^{-\mu^2} d\mu - \int_0^{(x-x_1)/2a\sqrt{y}} e^{-\mu^2} d\mu \right].$$

Laplas funksiyasi orqali ifodalab, quyidagi yechimni hosil qilamiz:

$$u(x, y) = \frac{u_0}{2} \left[\Phi\left(\frac{x-x_2}{2a\sqrt{y}}\right) - \Phi\left(\frac{x-x_1}{2a\sqrt{y}}\right) \right].$$

$$994. \quad \frac{\partial u}{\partial y} = \frac{\partial^2 u}{\partial x^2}, \quad y > 0, \quad 0 < x < +\infty, \quad u(x, 0) = u_0, \quad u(0, y) = 0 \quad \text{bir}$$

tomondan chegaralanmagan sterjenda issiqlik tarqalishi masalasini yechimni toping.

Yechish. Sterjenning uzunligi cheksiz bo'lgani uchun yechim bir tomondan chegaralanmagan sterjenda issiqlik tarqalishi (34) formula bilan topiladi:

$$u(x, y) = \frac{u_0}{2\sqrt{\pi y}} \int_0^{+\infty} \left[e^{-\frac{(x-\xi)^2}{4y}} - e^{-\frac{(x+\xi)^2}{4y}} \right] d\xi = \frac{u_0}{2\sqrt{\pi y}} \left[\int_0^{\infty} e^{-\frac{(x-\xi)^2}{4y}} d\xi - \int_0^{\infty} e^{-\frac{(x+\xi)^2}{4y}} d\xi \right].$$

$\mu = \frac{x-\xi}{2\sqrt{y}}, \quad d\xi = -2\sqrt{y}d\mu$ almashtirish bajarsak, birinchi integral

quyidagi ko'rinishda bo'ladi:

$$\frac{u_0}{2\sqrt{\pi y}} \int_0^{\infty} e^{-\frac{(x-\xi)^2}{4y}} d\xi = \frac{u_0}{\sqrt{\pi}} \int_{-\infty}^{x/2\sqrt{y}} e^{-\mu^2} d\mu = \frac{u_0}{\sqrt{\pi}} \left[1 + \Phi\left(\frac{x}{2\sqrt{y}}\right) \right].$$

$\mu = \frac{x+\xi}{2\sqrt{y}}, \quad d\xi = 2\sqrt{y}d\mu$ almashtirish bajarsak, ikkinchi integral

quyidagi ko'rinishda bo'ladi:

$$\frac{u_0}{2\sqrt{\pi y}} \int_0^{\infty} e^{-\frac{(x+\xi)^2}{4y}} d\xi = \frac{u_0}{\sqrt{\pi}} \int_{x/2\sqrt{y}}^{\infty} e^{-\mu^2} d\mu = \frac{u_0}{\sqrt{\pi}} \left[1 - \Phi\left(\frac{x}{2\sqrt{y}}\right) \right].$$

Shunday qilib, yechim quyidagi ko'rinishni oladi:

$$u(x, y) = u_0 \Phi\left(\frac{x}{2\sqrt{y}}\right).$$

$$995. \frac{\partial u}{\partial y} = \frac{\partial^2 u}{\partial x^2}, \quad y > 0, \quad 0 < x < l, \quad u(x, 0) = f(x) = \begin{cases} x, & 0 < x \leq \frac{l}{2}, \\ l - x, & \frac{l}{2} \leq x < l, \end{cases}$$

va $u(0, y) = u(l, y) = 0$ har ikki tomonidan mahkamlangan sterjenda issiqlik tarqalishi masalasini yechimini toping.

Yechish. Sterjen har ikki tomonidan mahkamlangan bo'lgani uchun yechim (35) formula bilan topiladi:

$$u(x, y) = \sum_{n=1}^{\infty} b_n e^{-\left(\frac{n\pi x}{l}\right)^2 y} \sin \frac{n\pi x}{l}.$$

$$b_n = \frac{2}{l} \int_0^l f(x) \sin \frac{n\pi x}{l} dx = \frac{2}{l} \int_0^{l/2} x \sin \frac{n\pi x}{l} dx + \frac{2}{l} \int_{l/2}^l (l-x) \sin \frac{n\pi x}{l} dx = I_1 + I_2.$$

$$I_1 = \frac{2}{l} \int_0^{l/2} x \sin \frac{n\pi x}{l} dx = \left| \begin{array}{ll} u_1 = x, & du_1 = dx \\ dv_1 = \sin \frac{n\pi x}{l} dx, & v_1 = -\frac{1}{n\pi} \cos \frac{n\pi x}{l} \end{array} \right| = -\frac{2}{n\pi} x \cos \frac{n\pi x}{l} \Big|_0^{l/2} + \frac{2}{n\pi} \int_0^{l/2} \cos \frac{n\pi x}{l} dx = \frac{2l}{n^2 \pi^2} \sin \frac{n\pi x}{l} \Big|_0^{l/2} = \frac{2l}{n^2 \pi^2} \sin \frac{n\pi}{2}.$$

$$I_2 = \frac{2}{l} \int_{l/2}^l (l-x) \sin \frac{n\pi x}{l} dx = \left| \begin{array}{ll} u_1 = l-x, & du_1 = -dx \\ dv_1 = \sin \frac{n\pi x}{l} dx, & v_1 = -\frac{1}{n\pi} \cos \frac{n\pi x}{l} \end{array} \right| = \frac{2}{l} \left[-\frac{l}{n\pi} (l-x) \cos \frac{n\pi x}{l} \Big|_{l/2}^l - \frac{l}{n\pi} \int_{l/2}^l \cos \frac{n\pi x}{l} dx \right] = -\frac{2}{n\pi} \int_{l/2}^l \cos \frac{n\pi x}{l} dx = -\frac{2l}{n^2 \pi^2} \sin \frac{n\pi x}{l} \Big|_{l/2}^l = \frac{2l}{n^2 \pi^2} \sin \frac{n\pi}{2} \Rightarrow I_1 + I_2 = \frac{4l}{n^2 \pi^2} \sin \frac{n\pi}{2}.$$

U holda izlangan yechim

$$u(x, y) = \frac{4l}{\pi^2} \sum_{n=1}^{\infty} \frac{1}{n^2} \sin \frac{n\pi}{2} e^{-\left(\frac{n\pi}{l}\right)^2 y} \sin \frac{n\pi x}{l},$$

yoki

$$u(x, y) = \frac{4l}{\pi^2} \sum_{n=1}^{\infty} (-1)^k \frac{1}{(2k+1)^2} e^{-\left(\frac{(2k+1)\pi}{l}\right)^2 y} \sin \frac{(2k+1)\pi x}{l},$$

$$996. \frac{\partial u}{\partial y} = a^2 \frac{\partial^2 u}{\partial x^2}, \quad y > 0, \quad -\infty < x < +\infty \text{ chegaralanmagan sterjenda issiqlik dastlabki tarqalish qonuni quyidagicha bo'lsa,}$$

$$u(x,0) = f(x) = \begin{cases} 1 + \frac{x}{l}, & -l \leq x \leq 0, \\ 1 - \frac{x}{l}, & 0 \leq x \leq l, \\ 0, & -l < x > l, \end{cases}$$

masalaning yechimini toping.

Yechish. Sterjenning uzunligi cheksiz bo'lgani uchun yechim

$$u(x,y) = \frac{1}{2\sqrt{\pi y}} \int_{-l}^0 \left(1 + \frac{\xi}{l}\right) e^{-\frac{(\xi-x)^2}{4y}} d\xi + \frac{1}{2\sqrt{\pi y}} \int_0^l \left(1 - \frac{\xi}{l}\right) e^{-\frac{(\xi-x)^2}{4y}} d\xi.$$

$\mu = \frac{x-\xi}{2\sqrt{y}}$, $d\xi = -2\sqrt{y}d\mu$ almashtirish bajarsak, yechim quyidagi

ko'rinishni oladi:

$$\begin{aligned} u(x,y) = & \frac{1}{2} \left[\left(1 + \frac{x}{l}\right) \Phi\left(\frac{x+l}{2\sqrt{y}}\right) - 2 \frac{x}{l} \Phi\left(\frac{x}{2\sqrt{y}}\right) - \left(1 - \frac{x}{l}\right) \Phi\left(\frac{x-l}{2\sqrt{y}}\right) \right] + \\ & + \frac{1}{l} \sqrt{\frac{y}{\pi}} \left[e^{-\frac{(x+l)^2}{4y}} - 2e^{-\frac{x^2}{4y}} + e^{-\frac{(x-l)^2}{4y}} \right]. \end{aligned}$$

$$997. \frac{\partial u}{\partial y} = \frac{\partial^2 u}{\partial x^2} + 2 \sin y \sin x, \quad y > 0, \quad 0 < x < \pi, \quad u(x,0) = 0, \quad u(0,y) = \pi,$$

$u(\pi,y) = 2\pi$, chegaralangan sterjenda, bir jinsli bo'lmagan tenglama uchun birinchi chegaraviy masalaning yechimini toping.

Yechish. Bu masalada chegaraviy shartlar bir jinsli bo'lmagan uchun Furye usulini bordaniga qo'llab bo'lmaydi, shuning uchun chegaralangan sterjenda bo'lgani uchun quyidagi almashtirish bilan masalani bir jinsli shartli masalaga keltiramiz:

$$\begin{aligned} w(x,y) &= u(0,y) + [u(\pi,y) - u(0,y)] \frac{x}{\pi} = \pi + (2\pi - \pi) \frac{x}{\pi} = \pi + x, \\ w(0,y) &= \pi, \quad w(\pi,y) = 2\pi. \end{aligned}$$

Berilgan masalaning yechimini

$$u(x,y) = v(x,y) + w(x,y), \quad (38)$$

ko'rinishda izlaymiz, bu yerda $v(x,y)$ noma'lum funksiya. Bu funksiyani topish uchun

$$\left. \begin{aligned} \frac{\partial v}{\partial y} &= \frac{\partial^2 v}{\partial x^2} + 2 \sin y \sin x, \quad y > 0, 0 < x < \pi, v(x, 0) = 0, \\ v(0, y) &= 0, \quad v(\pi, y) = 0 \end{aligned} \right\} \quad (39)$$

masalaga kelamiz.

(39) masalaning yechimi, $f(x) = 0$ bo'lgani uchun quyidagi ko'rinishda bo'ladi:

$$u(x, y) = \sum_{n=1}^{\infty} Y_n(y) \sin \frac{n\pi x}{l},$$

bu yerda

$$Y_n(y) = \int_0^l g_n(\tau) e^{-\left(\frac{n\pi y}{l}\right)(y-\tau)} d\tau, \quad g_n(y) = \frac{2}{l} \int_0^l g(\xi, y) \sin \frac{n\pi \xi}{l} d\xi.$$

U holda berilgan masala uchun

$$g_n(y) = \frac{2}{\pi} \int_0^{\pi} 2 \sin y \sin \xi \sin n\xi d\xi = |n=1| = \frac{2 \sin y}{\pi} \int_0^{\pi} 2 \frac{1 - \cos 2\xi}{2} d\xi = 2 \sin y.$$

Bundan

$$Y_1(y) = \sin y - \cos y + e^{-y}.$$

Demak, masalaning yechimi, (38) formulaga asosan, quyidagi ko'rinishda bo'ladi:

$$u(x, y) = (\sin y - \cos y + e^{-y}) \sin x + x + \pi.$$

Issiqlik tarqalish tenglamasiga qo'yilgan quyidagi masalani Furye usulida yeching

$$998. \frac{\partial u}{\partial y} = a^2 \frac{\partial^2 u}{\partial x^2}, \quad y > 0, -\infty < x < +\infty, \quad u(x, 0) = f(x) = \begin{cases} 0, & x < 0, \\ u_0, & 0 < x < l, \\ 0, & l < x. \end{cases}$$

va $u(0, y) = 0$ bir tomonidan teploizolyatsiyalangan sterjenda issiqlik tarqalish masalasining yechimini toping.

$$999. \frac{\partial u}{\partial y} = a^2 \frac{\partial^2 u}{\partial x^2}, \quad y > 0, 0 < x < l, \quad u(x, 0) = f(x) = \frac{1}{l^2} cx(l-x)$$

va $u(0, y) = u(l, y) = 0$ har ikki tomonidan teploizolyatsiyalangan sterjenda issiqlik tarqalish masalasini yeching.

$$1000. \frac{\partial u}{\partial y} = \frac{\partial^2 u}{\partial x^2}, \quad y > 0, -\infty < x < +\infty, \quad u(x, 0) = f(x) = e^{-k^2 x^2}, \quad k = \text{const} > 0.$$

$$1001. \frac{\partial u}{\partial y} = 9 \frac{\partial^2 u}{\partial x^2}, \quad y > 0, -\infty < x < +\infty, \quad u(x, 0) = f(x) = e^{-\frac{x^2}{4}}.$$

Issiqlik o'tkazuvchanlik masalalarini yeching

1002. $\frac{\partial u}{\partial y} = a^2 \frac{\partial^2 u}{\partial x^2}, \quad y \geq 0, 0 < x < l, \quad u(x, 0) = u_0 = \text{const}, \quad u(0, y) = 0, \quad u(l, y) = 0.$

1003. $\frac{\partial u}{\partial y} = a^2 \frac{\partial^2 u}{\partial x^2}, \quad y \geq 0, 0 < x < \pi, \quad u(x, 0) = \sin x, \quad u(0, y) = 0, \quad u(\pi, y) = 0.$

1004. $\frac{\partial u}{\partial y} = a^2 \frac{\partial^2 u}{\partial x^2}, \quad y \geq 0, 0 < x < l, \quad u(x, 0) = 2 \sin 3x, \quad u(0, y) = 0, \quad u(l, y) = 0.$

1005. $\frac{\partial u}{\partial y} = a^2 \frac{\partial^2 u}{\partial x^2}, \quad y \geq 0, 0 < x < l, \quad u(x, 0) = x(l-x), \quad u(0, y) = 0, \quad u(l, y) = 0.$

1006. $\frac{\partial u}{\partial y} = a^2 \frac{\partial^2 u}{\partial x^2}, \quad y \geq 0, 0 < x < \pi, \quad u(x, 0) = 3 \sin \frac{\pi}{l} x - 5 \sin \frac{2\pi}{l} x,$
 $u(0, y) = 0, \quad u(\pi, y) = 0.$

1007. $\frac{\partial u}{\partial y} = 2 \frac{\partial^2 u}{\partial x^2}, \quad y \geq 0, 0 < x < 6, \quad u(x, 0) = 3 \sin 3\pi x - 5 \sin 4\pi x,$
 $u(0, y) = 0, \quad u(6, y) = 0.$

1008. $\frac{\partial u}{\partial y} = \frac{\partial^2 u}{\partial x^2} + y \sin x, \quad y \geq 0, 0 < x < \pi, \quad u(x, 0) = 0, \quad u(0, y) = 0, \quad u(\pi, y) = e^{-y}.$

1009. $\frac{\partial u}{\partial y} = \frac{\partial^2 u}{\partial x^2} + \sin \frac{\pi}{4} x, \quad y \geq 0, 0 < x < 2, \quad u(x, 0) = 0, \quad u(0, y) = 0, \quad u(2, y) = 0.$

1010. $\frac{\partial u}{\partial y} = \frac{\partial^2 u}{\partial x^2} + 3 \cos y \sin 6x, \quad y \geq 0, 0 < x < \pi, \quad u(x, 0) = 0,$
 $u(0, y) = 0, \quad u(\pi, y) = 0.$

1011. $\frac{\partial u}{\partial y} = \frac{1}{9} \frac{\partial^2 u}{\partial x^2} + y \sin 3x, \quad y \geq 0, 0 < x < \pi, \quad u(x, 0) = 2 \sin 2x,$
 $u(0, y) = 0, \quad u(\pi, y) = 0.$

1012*. $\frac{\partial u}{\partial y} = \frac{1}{4} \frac{\partial^2 u}{\partial x^2} + 10 \sin y \sin x, \quad y \geq 0, 0 < x < \pi, \quad u(x, 0) = 2 \sin 4x,$
 $u(0, y) = 0, \quad u(\pi, y) = 0.$

1013*. $\frac{\partial u}{\partial y} = 4 \frac{\partial^2 u}{\partial x^2} + \sin 2x, \quad y \geq 0, 0 < x < \pi, \quad u(x, 0) = \sin 3x,$
 $u(0, y) = e^y, \quad u(\pi, y) = e^{3y}.$

62-§. Elliptik tenglamaga qo'yilgan Dirixle masalasini doirada yechish

$$\Delta u = \frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} + \frac{\partial^2 u}{\partial z^2} = 0 \quad (40)$$

(40) tenglama fazoda **Laplas tenglamasi** deb ataladi, uning yechimi esa

$$u(x, y, z) = \ln \frac{1}{r}, \quad r = \sqrt{(x - x_0)^2 + (y - y_0)^2 + (z - z_0)^2}. \quad (41)$$

$$\Delta u = \frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0 \quad (42)$$

(42) tenglama tekislikda Laplas tenglamasi deb ataladi, uning yechimi esa

$$u(x, y) = \ln \frac{1}{r}, \quad r = \sqrt{(x - x_0)^2 + (y - y_0)^2} \quad (43)$$

ko'rinishda bo'ladi.

(41) va (43) funksiyalar **garmonik funksiyalar** deyiladi.

(42) tenglamada $x = r \cos \varphi$, $y = r \sin \varphi$ almashtirish bajarsak u quyidagi ko'rinishga keladi:

$$r^2 \frac{\partial^2 u}{\partial r^2} + r \frac{\partial u}{\partial r} + \frac{\partial^2 u}{\partial \varphi^2} = 0 \quad (44)$$

Dirixle masalasi. (Doira uchun) (44) tenglamani

$$u(r, \varphi)|_{\sigma} = f(\varphi) \quad (45)$$

shartni qanoatlantiruvchi yechimi topilsin.

Bu masala doirada Dirixle masalasi deb ataladi. Bunda σ -doira chegarasi.

Yechish. Masalaning yechimini Furye usuli bilan

$$u(r, \varphi) = R(r) \cdot Q(\varphi) \quad (46)$$

ko'rinishda qidiramiz. (46) ni (44) ga qo'ysak, quyidagi tenglama hosil bo'ladi:

$$r^2 R'' Q + r R' Q + R Q'' = 0.$$

O'zgaruvchilarni ajratib,

$$\frac{Q''}{Q} = -\frac{r^2 R'' + r R'}{R}$$

tenglikni hosil qilamiz. Tenglikning har ikki tomonini $-\lambda^2$ ($\lambda > 0$) ga tenglab, quyidagi oddiy differensial tenglamani hosil qilamiz:

$$Q'' + \lambda^2 Q = 0, \quad r^2 R'' + rR' - \lambda^2 R = 0.$$

Bu tenglamalarni $\lambda = 0$ bo‘lgandagi yechimi:

$$Q(\varphi) = A + B\varphi, \quad (47)$$

$$R(r) = A + B\ln r. \quad (48)$$

$\lambda > 0$ bo‘lgandagi birinchi tenglamaning umumiy yechimi quyidagi ko‘rinishda bo‘ladi:

$$Q(\varphi) = A\cos\varphi + B\sin\varphi, \quad Q(\varphi) = A + B\varphi. \quad (48)$$

$\lambda > 0$ bo‘lgandagi ikkinchi tenglamaning yechimini $R(r) = r^n$ ko‘rinishida qidiramiz:

$$r^2 m(m-1)r^{m-2} + rmr^{m-1} - \lambda^2 r^m = 0 \Rightarrow r^m(m^2 - \lambda^2) = 0 \Rightarrow m_{1,2} = \pm\lambda.$$

Bundan ikkinchi tenglamaning umumiy yechimi quyidagi ko‘rinishda bo‘ladi:

$$R(r) = Cr^\lambda + Dr^{-\lambda}. \quad (50)$$

(50) yechimda $r=0$ nuqtada funksiya uzulishga ega bo‘ladi, bundan esa funksiya doirada bu nuqtada garmonik bo‘la olmaydi. Shuning uchun (50) da $D=0$ deb olamiz. U holda (46) ga asosan yechim

$$u_0(r, \varphi) = A_0/2, \quad u_n(r, \varphi) = (A\cos n\varphi + B\sin n\varphi)r^n, \quad n=1, 2, 3, \dots$$

umumiy yechim esa quyidagi ko‘rinishda bo‘ladi:

$$u(r, \varphi) = \frac{A_0}{2} + \sum_{n=1}^{\infty} (A\cos n\varphi + B\sin n\varphi)r^n. \quad (51)$$

(51) yechimidan A_0, A_n, B_n koeffitsiyentlarni aniqlash uchun (45) chegaraviy shartni bajarsak:

$$f(\varphi) = \frac{A_0}{2} + \sum_{n=1}^{\infty} (A\cos n\varphi + B\sin n\varphi) R^n.$$

Bu yerda

$$A_0 = \frac{1}{\pi} \int_{-\pi}^{\pi} f_1(\tau) d\tau, \quad A_n = \frac{1}{\pi R^n} \int_{-\pi}^{\pi} f_1(\tau) \cos n\tau d\tau, \quad B_n = \frac{1}{\pi R^n} \int_{-\pi}^{\pi} f_1(\tau) \sin n\tau d\tau.$$

Bulami (51) qo‘ysak,

$$u(r, \varphi) = \frac{1}{\pi} \int_{-\pi}^{\pi} f_1(\tau) \left[\frac{1}{2} + \sum_{n=1}^{\infty} \left(\frac{r}{R} \right)^n \cos n(\tau - \varphi) \right] d\tau.$$

Hosil bo'lgan yechimni soddalashtiramiz, buning uchun $\frac{r}{R} = \rho$, $\tau - \varphi = t$ almashtirish bajarsak, katta qavs ichidagi ifoda quydag'i ko'rinishga keladi:

$$\frac{1}{2} + \sum_{n=1}^{\infty} \rho^n \cos nt = \sum_{n=0}^{\infty} \rho^n \cos nt - \frac{1}{2}.$$

Quyidagi qatorni ko'rib chiqamiz:

$$\sum_{n=0}^{\infty} (\rho e^n)^n = \sum_{n=0}^{\infty} \rho^n \cos nt + i \sum_{n=0}^{\infty} \rho^n \sin nt.$$

Bu qator $\rho < 1$ da yaqinlashuvchi va uning yig'indisi quyidagiga teng:

$$\frac{1}{1 - \rho e^n} = \frac{1}{1 - \rho \cos t - i \rho \sin t} = \frac{1 - \rho \cos t + i \rho \sin t}{1 - 2\rho \cos t + \rho^2}.$$

Bundan

$$\sum_{n=0}^{\infty} \rho^n \cos nt - \frac{1}{2} = \frac{1 - \rho \cos t + i \rho \sin t}{1 - 2\rho \cos t + \rho^2} - \frac{1}{2} = \frac{1 - \rho^2}{2(1 - 2\rho \cos t + \rho^2)}.$$

Buni e'tiborga olsak, umumiy yechim quyidagi ko'rinishga keladi:

$$u(r, \varphi) = \frac{1}{2\pi} \int_{-\pi}^{\pi} f(\tau) \frac{R^2 - r^2}{R^2 - 2Rr \cos(\tau - \varphi) + r^2} d\tau.$$

Shunday qilib, aylana uchun Dirixle masalasining yechimini hosil qildik, o'ng tomondagi integral Puasson integrali deb ataladi.

Laplas tenglamasining doiraning ichki qismida berilgan chegaraviy shartlarni qanoatlantiruvchi $u(r, \varphi)$ yechimini toping

1015. $u(3, \varphi) = 3 + 5 \cos \varphi, \quad r \leq 3.$

1016. $u(2, \varphi) = 2 + 3 \sin \varphi, \quad r \leq 2.$

1017. $u(3, \varphi) = \sin^2 \varphi, \quad r \leq 3.$

1018. $u(2, \varphi) = \cos^2 \varphi, \quad r \leq 2.$

63-§. Elliptik tenglamaga Dirixle masalasini to'g'ri to'rtburchakda va halqada yechish

$D = \left\{ (x, y); 0 < x < a, -\frac{b}{2} < y < \frac{b}{2} \right\}$ sohada quyidagi tenglama berilgan bo'lsin:

$$\Delta u = \frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0. \quad (52)$$

1019. D sohada (52) tenglamani va quyidagi chegaraviy shartlarni qanoatlanfiruvchi yechimini toping:

$$\begin{aligned} u(0, y) &= \psi_1(y), \quad u(a, y) = \psi_2(y), \quad -\frac{b}{2} < y < \frac{b}{2}, \\ u\left(x, -\frac{b}{2}\right) &= \varphi_1(y), \quad u\left(x, \frac{b}{2}\right) = \varphi_2(y), \quad 0 < x < a. \end{aligned} \quad (53)$$

Yechish. Masalani yechish uchun, avval, $\psi_1(y) = \psi_2(y) = 0$ bo‘lgan **1-xususiy holni** ko‘rib chiqamiz:

$$\left. \begin{aligned} \Delta u &= \frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0; \quad u(0, y) = 0, \quad u(a, y) = 0, \quad -\frac{b}{2} < y < \frac{b}{2}, \\ u\left(x, -\frac{b}{2}\right) &= \varphi_1(y), \quad u\left(x, \frac{b}{2}\right) = \varphi_2(y), \quad 0 < x < a. \end{aligned} \right\} \quad (54)$$

(54) masalani Furye usulida yechamiz. Nol bo‘limgan yechimni $u(x, y) = X(x)Y(y)$ (55)

ko‘rinishda izlaymiz. (55) ni (52) ga qo‘yib, o‘zgaruvchilarni ajratsak,

$$\frac{X''(x)}{X(x)} = -\frac{Y''(y)}{Y(y)} = -\lambda, \quad \lambda > 0,$$

kelib chiqadi, bundan esa quyidagi oddiy differensial tenglamalarni hosil qilamiz:

$$X''(x) + \lambda X(x) = 0, \quad (56)$$

$$Y''(y) - \lambda Y(y) = 0. \quad (57)$$

(56) tenglamani $X(0) = X(a) = 0$ shart bilan yechamiz:

$$X_n(x) = C \sin \lambda_n x, \quad \lambda_n = \frac{\pi n}{a} \Rightarrow X_n(x) = C \sin \frac{\pi n}{a} x, \quad n = 1, 2, \dots \quad (58)$$

(57) tenglamaning $\lambda = \lambda_n$ shart bo‘yicha yechimi:

$$Y_n(y) = D_1 e^{\frac{\pi n}{a} y} + D_2 e^{-\frac{\pi n}{a} y} = D_1 \cosh \frac{\pi n}{a} y + D_2 \sinh \frac{\pi n}{a} y \quad (59)$$

ko‘rinishda bo‘ladi, bunda D_1, D_2 -ixtiyoriy o‘zgarmaslar.

(58) va (59) larni (55) ga qo‘ysak hamda (52) tenglamani chiziqli va bir jinsli bo‘lganligidan, quyidagi qator ham (54) masala-ning birinchi ikkita shartini qanoatlanfiruvchi yechimi bo‘ladi:

$$u(x, y) = \sum_{n=1}^{\infty} \left(A_n \cosh \frac{\pi n}{a} y + B_n \sinh \frac{\pi n}{a} y \right) \sin \frac{\pi n}{a} x. \quad (60)$$

$u(x,y)$ funksiyani (54) masalaning qolgan ikki shartiga bo'yusundirib A_n , B_n larni aniqlaymiz, ya'ni:

$$\begin{aligned} u\left(x, -\frac{b}{2}\right) &= \sum_{n=1}^{\infty} \left(A_n ch \frac{\pi n b}{2a} + B_n sh \frac{\pi n b}{2a} \right) \sin \frac{\pi n}{a} x = \varphi_1(x), \\ u\left(x, \frac{b}{2}\right) &= \sum_{n=1}^{\infty} \left(A_n ch \frac{\pi n b}{2a} + B_n sh \frac{\pi n b}{2a} \right) \sin \frac{\pi n}{a} x = \varphi_2(x). \end{aligned} \quad (61)$$

$\varphi_1(x)$, $\varphi_2(x)$ funksiyani $(0,a)$ oraliqda sinuslar bo'yicha qatorga yoyib ushbuga ega bo'lamiz:

$$\varphi_1(x) = \sum_{n=1}^{\infty} a_n \sin \frac{\pi n}{a} x, \quad \varphi_2(x) = \sum_{n=1}^{\infty} b_n \sin \frac{\pi n}{a} x, \quad (62)$$

bu yerda

$$a_n = \frac{2}{a} \int_0^a \varphi_1(x) \sin \frac{\pi n}{a} x dx, \quad b_n = \frac{2}{a} \int_0^a \varphi_2(x) \sin \frac{\pi n}{a} x dx. \quad (63)$$

(61) va (62) qatorlar koeffitsiyentlarini tenglab,

$$A_n ch \frac{\pi n b}{2a} - B_n sh \frac{\pi n b}{2a} = a_n, \quad A_n ch \frac{\pi n b}{2a} + B_n sh \frac{\pi n b}{2a} = b_n$$

larni hosil qilamiz. Bundan

$$A_n = \frac{a_n + b_n}{2 ch \frac{\pi n b}{2a}}, \quad B_n = \frac{a_n - b_n}{2 sh \frac{\pi n b}{2a}}.$$

A_n va B_n qiymatlarni (60) ga qo'yib, (54) masalaning yechimini hosil qilamiz:

$$u(x,y) = \sum_{n=1}^{\infty} \left(\frac{a_n + b_n}{2 ch \frac{\pi n b}{2a}} ch \frac{\pi n}{a} y + \frac{a_n - b_n}{2 sh \frac{\pi n b}{2a}} sh \frac{\pi n}{a} y \right) \sin \frac{\pi n}{a} x. \quad (64)$$

Masalani yechish uchun, $\varphi_1(x) = \varphi_2(x) = 0$ bo'lgan 2-xususiy holni ko'rib chiqamiz.

$$\left. \begin{aligned} u(0,y) &= \psi_1(y), \quad u(a,y) = \psi_2(y), \quad -\frac{b}{2} < y < \frac{b}{2}, \\ \Delta u &= \frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0; \quad u\left(x, -\frac{b}{2}\right) = 0, \quad u\left(x, \frac{b}{2}\right) = 0, \quad 0 < x < a. \end{aligned} \right\} \quad (65)$$

(65) masalani yechishda (54) masalaning yechimidan foydalananish uchun yangi o'zgaruvchi kiritamiz:

$$x_1 = y + \frac{b}{2}, \quad y_1 = x - \frac{a}{2}.$$

U holda (65) masalaning chegaraviy shartlari (66), shundanay chegaraviy shartlariga keladi, a va b sonarning o'mi olmasakda, (64) yechimida φ_1 , φ_2 funksiyalar o'miga ψ_1 , ψ_2 funksiyalar olasadi. Agar x , y o'zgaruvchilarga qaytilsa (65) masalaning yezdimi

$$u(x,y) = \sum_{n=1}^{\infty} \left(\frac{a_n + b_n}{2ch \frac{\pi n a}{2b}} ch \frac{\pi n}{b} \left(x - \frac{a}{2} \right) + \frac{a_n - b_n}{2sh \frac{\pi n a}{2b}} sh \frac{\pi n}{b} \left(x - \frac{a}{2} \right) \right) \sin \frac{\pi n}{b} \left(y + \frac{b}{2} \right) \quad (66)$$

ko'rnishda bo'ladi, bu yerda

$$c_n = \frac{2}{b} \int_{-b/2}^{b/2} \psi_1(x) \sin \frac{\pi n}{b} \left(y + \frac{b}{2} \right) dy, \quad d_n = \frac{2}{b} \int_{-b/2}^{b/2} \psi_2(x) \sin \frac{\pi n}{b} \left(y + \frac{b}{2} \right) dy. \quad (67)$$

Dirixle masalasining to'g'ri to'rtburchak uchun yechimi, ya'ni 1019-misolning yechimi (64) va (66) yechimlar yig'indisidan iborat bo'ladi.

1020. $D = \{(x,y) : 0 \leq x \leq 2, -1 \leq y \leq 1\}$ sohaning ichki qismida tenglanamaning quyidagi chegaraviy shartlarni qanoatlantirish uchun yechimini toping:

$$u(0,y) = 0, \quad u(2,y) = 0, \quad -1 \leq y \leq 1, \quad u(x,-1) = 0, \quad u(x,1) = \sin \frac{\pi x}{2}, \quad 0 \leq x \leq 2.$$

Yechish. Masalaning yechimi (64) formula bilan tenglanamaning quyidagi chegaraviy shartlarni qanoatlantirish uchun Koeffitsiyentlarni (63) formula yordamida topamiz:

$$\begin{aligned} \varphi_1(x) &= 0, \Rightarrow a_n = \frac{2}{a} \int_0^a \varphi_1(x) \sin \frac{\pi n}{a} x dx = 0, \\ b_n &= \frac{2}{a} \int_0^a \varphi_2(x) \sin \frac{\pi n}{a} x dx = \frac{2}{2} \int_0^2 \sin \frac{\pi n}{2} x \sin \frac{\pi n}{2} x dx = \\ &= \frac{1}{2} \int_0^2 (1 - \cos \pi n x) dx = \frac{1}{2} \left(x - \frac{1}{\pi n} \sin \pi n x \right) \Big|_0^2 = 1. \end{aligned}$$

Bundan

$$\begin{aligned}
 u(x, y) &= \sum_{n=1}^{\infty} \left(\frac{a_n + b_n}{2ch \frac{\pi n b}{2a}} ch \frac{\pi n}{a} y + \frac{a_n - b_n}{2sh \frac{\pi n b}{2a}} sh \frac{\pi n}{a} y \right) \sin \frac{\pi n}{a} x = \\
 &= \sum_{n=1}^{\infty} \left(\frac{1}{2ch \frac{\pi n \cdot 2}{2 \cdot 2}} ch \frac{\pi n}{2} y + \frac{1}{2sh \frac{\pi n \cdot 2}{2 \cdot 2}} sh \frac{\pi n}{2} y \right) \sin \frac{\pi n}{2} x = \\
 &= \sum_{n=1}^{\infty} \left(\frac{ch \frac{\pi n}{2} y}{2ch \frac{\pi n}{2}} + \frac{sh \frac{\pi n}{2} y}{2sh \frac{\pi n}{2}} \right) \sin \frac{\pi n}{2} x.
 \end{aligned}$$

Halqa uchun Dirixle masalasi

Qutb koordinatalar sistemasida

$$\frac{1}{r} \frac{\partial}{\partial r} \left(r \frac{\partial u}{\partial r} \right) + \frac{1}{r^2} \frac{\partial^2 u}{\partial \varphi^2} = 0, \quad R_1 < r < R_2, \quad -\infty < \varphi < +\infty \quad (68)$$

Laplas tenglamasining

$$u(r, \varphi + 2\pi) = u(r, \varphi) \quad (69)$$

davriylik shartini va

$$u(R_1, \varphi) = f_1(\varphi), \quad u(R_2, \varphi) = f_2(\varphi) \quad (70)$$

cheagaraviy shartlarni qanoatlantiruvchi yechimini toping.

Avval (68)-(70) masalaning xususiy holini, ya'ni doiraviy simmetriyaga ega bo'lgan yechimini topamiz. Bunda yechim φ ga bog'liq bo'lmaydi va

$$\frac{1}{r} \frac{\partial}{\partial r} \left(r \frac{\partial u}{\partial r} \right) = 0. \quad (71)$$

Tenglamaning

$$u(R_1) = u_1, \quad u(R_2) = u_2, \quad (u_1, u_2 = const) \quad (72)$$

cheagaraviy shartlarni qanoatlantiruvchi yechimini topish masalasi kelib chiqadi.

(71) tenglamaning umumiy yechimi quyidagi ko'rinishda bo'ladi:

$$u = C_1 \ln r + C_2. \quad (73)$$

C_1 va C_2 o'zgarmaslarini (72) shart yordamida topamiz:

$$u_1 = C_1 \ln R_1 + C_2, \quad u_2 = C_1 \ln R_2 + C_2.$$

Bundan

$$C_1 = \frac{u_2 - u_1}{\ln R_2 - \ln R_1}, \quad C_2 = \frac{u_1 \ln R_2 - u_2 \ln R_1}{\ln R_2 - \ln R_1}$$

O'zgarmaslarini (73) ga qo'yishak (68)-(69) masalaning yechimini topamiz
ga bog'liq bo'limgan holdagi yechimini topamiz.

$$u(r) = \frac{u_2 - u_1}{\ln R_2 - \ln R_1} \ln r + \frac{u_1 \ln R_2 - u_2 \ln R_1}{\ln R_2 - \ln R_1} \quad (76)$$

1021. Laplas tenglamasining $1 \leq r \leq 2$ halqanining $u(1)=4, u(2)=6$ chegaraviy shartlarni qanoatlantiruvchi $u(r)$ yechimini toping.

Yechish. Masala doiraviy simmetriyaga ega. Shu uchun, bu masalaning yechimi (74) formuladan topiladi:

$$u(r) = \frac{6-4}{\ln 2 - \ln 1} \ln r + \frac{4 \ln 2 - 6 \ln 1}{\ln 2 - \ln 1} = \frac{2}{\ln 2} \ln r + 4.$$

Endi (68)-(70) masalani yechamiz.

Furye usuliga asosan noldan farqli yechimni

$$u(r, \varphi) = R(r)Q(\varphi)$$

ko'rinishda qidiramiz.

(75) ni (68) ga qo'yamiz:

$$\frac{Q''(\varphi)}{Q(\varphi)} = \frac{r^2 R''(r) + r R'(r)}{R(r)} = -\lambda, \lambda > 0.$$

Bundan ikkita oddiy differensial tenglamani hosil qilishimiz:

$$Q''(\varphi) + \lambda Q(\varphi) = 0,$$

$$r^2 R''(r) + r R'(r) - \lambda R(r) = 0.$$

$$u(r, \varphi + 2\pi) = u(r, \varphi)$$

shart bajarilishi uchun, (76) tenglamada $\lambda = n^2$ deb olinadi. U holda (76) teglamaning umumiy yechimi

$$Q(\varphi) = A \cos n\varphi + B \sin n\varphi \quad (78)$$

kelib chiqadi.

(77) tenglama $n=0$ bo'lganda quyidagi ko'rinishdagi yechimiga ega bo'ladi:

$$R(r) = A_0 \ln r + B_0.$$

$n > 0$ bo'lganda (77) tenglamaning yechimini $R(r) = r^m$ kelinganida izlaymiz. U holda

$$r^2 m(m-1)r^{m-2} + rmr^{m-1} - n^2 r^m = 0 \Rightarrow r^2 (m^2 - n^2) = 0 \Rightarrow m = n.$$

Demak, (77) tenglamaning yechimi

$$R(r) = Cr^n + \frac{D}{r^n}. \quad (80)$$

(78)-(80) tengliklarni e'tiborga olib, umumiyl yechimni quyidagicha yozamiz:

$$u(r, \varphi) = \sum_{n=1}^{\infty} \left[\left(A_n r^n + \frac{B_n}{r^n} \right) \cos n\varphi + \left(C_n r^n + \frac{D_n}{r^n} \right) \sin n\varphi \right] + A_0 \ln r + B_0. \quad (81)$$

Noma'lum koeffitsiyentlarni topish uchun $f_1(\varphi)$ va $f_2(\varphi)$ funksiyalarni Furye qatoriga yoyamiz:

$$\begin{aligned} f_1(\varphi) &= \frac{a_0}{2} + \sum_{n=1}^{\infty} (a_n \cos n\varphi + b_n \sin n\varphi), \\ f_2(\varphi) &= \frac{c_0}{2} + \sum_{n=1}^{\infty} (c_n \cos n\varphi + d_n \sin n\varphi), \end{aligned} \quad (82)$$

Bu yerda

$$\begin{aligned} a_0 &= \frac{1}{\pi} \int_0^{2\pi} f_1(\tau) d\tau, \quad a_n = \frac{1}{\pi} \int_0^{2\pi} f_1(\tau) \cos n\tau d\tau, \quad b_n = \frac{1}{\pi} \int_0^{2\pi} f_1(\tau) \sin n\tau d\tau, \\ c_0 &= \frac{1}{\pi} \int_0^{2\pi} f_2(\tau) d\tau, \quad c_n = \frac{1}{\pi} \int_0^{2\pi} f_2(\tau) \cos n\tau d\tau, \quad d_n = \frac{1}{\pi} \int_0^{2\pi} f_2(\tau) \sin n\tau d\tau. \end{aligned}$$

(83)

(72) shartlardan foydalanib va (81) formuladagi sinuslar va kosisuslar oldidagi koeffitsiyentlarni tenglab, quyidagilarni topamiz:

$$\begin{aligned} a_n &= A_n R_1^n + \frac{B_n}{R_1^n}, \quad b_n = A_n R_1^n + \frac{D_n}{R_1^n}, \quad \frac{a_0}{2} = A_0 R_1 + B_0, \\ c_n &= A_n R_2^n + \frac{B_n}{R_2^n}, \quad d_n = A_n R_2^n + \frac{D_n}{R_2^n}, \quad \frac{c_0}{2} = A_0 R_2 + B_0, \end{aligned} \quad (84)$$

Bundan noma'lum koeffitsiyentlarni aniqlab, ulami (81) ga qo'yib, (68)-(70) masalani yechimini topamiz:

$$u(r, \varphi) = \frac{c_0 - a_0}{2(\ln R_2 - \ln R_1)} \ln r + \frac{a_0 \ln R_1 - c_0 \ln R_2}{2(\ln R_2 - \ln R_1)} + \\ + \sum_{n=1}^{\infty} \left[\frac{(c_n R_2^n - a_n R_1^n) r^{2n} - (c_n R_1^n - a_n R_2^n) R_1^n R_2^n}{(R_2^{2n} - R_1^{2n}) r^n} \cos n\varphi + \right. \\ \left. + \frac{(c_n R_2^n - a_n R_1^n) r^{2n} - (c_n R_1^n - a_n R_2^n) R_1^n R_2^n}{(R_2^{2n} - R_1^{2n}) r^n} \sin n\varphi \right] \quad (85)$$

1022. Laplas tenglamasining $1 \leq r \leq 2$ halqanining ichki qismida $u|_{R_1=1}=1-\cos\varphi$, $u|_{R_2=2}=1-\sin 2\varphi$ chegaraviy shartlarni qanoatlantiruvchi yechimini toping:

Yechish. Masalaning yechimini (85) formuladan topiladi, shuning uchun koeffitsiyentlarni topamiz:

$$a_0 = \frac{1}{\pi} \int_0^{2\pi} f_1(\tau) d\tau = \frac{1}{\pi} \int_0^{2\pi} (1 - \cos \varphi) d\tau = \frac{1}{\pi} (\tau - \sin \tau) \Big|_0^{2\pi} = 2,$$

$$a_n = \frac{1}{\pi} \int_0^{2\pi} f_1(\tau) \cos n\tau d\tau = \frac{1}{\pi} \int_0^{2\pi} (1 - \cos \tau) \cos n\tau d\tau = |n=1| =$$

$$= \frac{1}{\pi} \left(\sin \tau \Big|_0^{2\pi} - \frac{1}{2} \int_0^{2\pi} (1 + \cos 2\tau) d\tau \right) = -1,$$

$$b_n = 0, \quad c_0 = 0, \quad c_n = 0,$$

$$d_n = \frac{1}{\pi} \int_0^{2\pi} f_2(\tau) \sin n\tau d\tau = \frac{1}{\pi} \int_0^{2\pi} \sin 2\tau \sin n\tau d\tau = |n=2| = \frac{1}{2\pi} \int_0^{2\pi} (1 - \cos 4\tau) d\tau = 0.$$

U holda, topilganlarni (85) ga qo'ysak:

$$u(r, \varphi) = \frac{0 - 2}{2(\ln 2 - \ln 1)} \ln r + \frac{2 \ln 2 - 0 \ln 1}{2(\ln 2 - \ln 1)} + \\ + \frac{(0 \cdot 2 + 1 \cdot 1)r^2 - (0 \cdot 1 - 1 \cdot 2) \cdot 1 \cdot 2}{(2^2 - 1)r} \cos \varphi +$$

$$+\frac{(1 \cdot 2^2 + 0 \cdot 1)r^4 - (1 \cdot 1 - 0 \cdot 2^2) \cdot 1 \cdot 2}{(2^4 - 1)r^2} \sin 2\varphi = \\ = 1 - \frac{\ln r}{\ln 2} + \frac{r^2 - 4}{3r} \cos \varphi + \frac{4r^4 - 4}{15r^2} \sin 2\varphi.$$

Laplas tenglamasining to‘g‘ri to‘rtburchakning ichki qismida berilgan chegaraviy shartlarni qanoatlantiruvchi $u(x, y)$ yechimini toping

1023. $u(0, y) = 0, \quad u(\pi, y) = 0, \quad -1 \leq y \leq 0, \quad u(x, -1) = 0,$
 $u(x, 1) = \sin 3x, \quad 0 \leq x \leq \pi$

1024. $u(0, y) = 0, \quad u(2, y) = \sin 4y, \quad -\pi \leq y \leq \pi, \quad u(x, -\pi) = 0,$
 $u(x, \pi) = 0, \quad 0 \leq x \leq 2$

1025. $u(0, y) = \sin y, \quad u(\pi, y) = 0, \quad -\pi \leq y \leq \pi, \quad u(x, -\pi) = 0,$
 $u(x, 1) = \sin 2x, \quad 0 \leq x \leq \pi$

1026*. $u(0, y) = 0, \quad u(\pi, y) = \sin 2y, \quad -\pi \leq y \leq \pi, \quad u(x, -\pi) = \sin 3x,$
 $u(x, \pi) = 0, \quad 0 \leq x \leq \pi.$

Laplas tenglamasining halqaning ichki qismida berilgan chegaraviy shartlarni qanoatlantiruvchi $u(r)$ yechimini toping

1027. $u(2) = 4, \quad u(3) = 8, \quad 2 \leq r \leq 3.$

1028. $u(3) = 7, \quad u(5) = 10, \quad 3 \leq r \leq 5.$

Laplas tenglamasining halqaning ichki qismida berilgan chegaraviy shartlarni qanoatlantiruvchi $u(r, \varphi)$ yechimini toping

1029. $u(1, \varphi) = \sin \varphi, \quad u(3, \varphi) = \cos \varphi, \quad 1 \leq \varphi \leq 3.$

1030. $u(2, \varphi) = \cos 2\varphi, \quad u(5, \varphi) = \sin 3\varphi, \quad 2 \leq \varphi \leq 3.$

1031. $u(1, \varphi) = 4, \quad u(3, \varphi) = \sin \varphi, \quad 1 \leq \varphi \leq 3.$

1032*. $u(2, \varphi) = \sin \varphi, \quad u(3, \varphi) = \sin 2\varphi, \quad 2 \leq \varphi \leq 3.$

VIII BOB. OPERATSION HISOB ELEMENTLARI

64-§. Laplas tasviri. Funksiyaning tasvirini topish

$f(t)$ funksiya t haqiqiy o'zgaruvchining barcha $t \in (-\infty; \infty)$ qiymatlarida aniqlangan haqiqiy funksiya bo'lsin.

Quyidagi shartlarni qanoatlantiruvchi $f(t)$ funksiya **original** (asli) deyiladi:

$$1) t < 0 \text{ da } f(t) = 0;$$

$$2) f(t) \text{ bo'lakli uzluksiz};$$

3) shunday $M > 0$ va $s_0 \geq 0$ sonlar topiladiki, barcha t larda $|f(t)| \leq M e^{s_0 t}$ tengsizlik bajariladi.

Ta'rif. $f(t)$ originalning tasviri deb $p = s + i\sigma$ kompleks o'zgaruvchining

$$F(p) = \int_0^{\infty} f(t) e^{-pt} dt \quad (1)$$

integral bilan aniqlangan $F(p)$ funksiyaga aytildi.

Ba'zi adabiyotlarda (1) integral Laplas integrali va kompleks o'zgaruvchiga bog'liq $F(p)$ funksiya esa Laplas tasvir deyiladi. Simvolik tarzda (1) formulani

$$F(p) = L[f(t)] \text{ yoki } F(p) \longrightarrow f(t) \text{ ko'rinishda belgilanadi.}$$

Laplas tasviri quyidagi xossalarga ega:

1. Chiziqlilik xossasi: $F_1(p) \longrightarrow f_1(t)$ va $F_2(p) \longrightarrow f_2(t)$ bo'lsa, $\{\alpha F_1(p) + \beta F_2(p)\} \longrightarrow \{\alpha f_1(t) + \beta f_2(t)\}$

2. O'zgarmas sonni chiqarish: $F(p) \longrightarrow f(t)$ bo'lsa, $c \cdot F(p) \longrightarrow c \cdot f(t)$.

3. O'xshashlik xossasi: $F(p) \longrightarrow f(t)$ bo'lsa, $\frac{1}{a} F\left(\frac{p}{a}\right) \longrightarrow f(ax)$.

4. Kechikish xossasi:

$$F(p) \longrightarrow f(t) \text{ bo'lsa, } e^{-tp} F(p) \longrightarrow f(t - t).$$

Asosiy elementar funksiyalarning tasvirlari jadvali

№	Original $f(t)$	Tasvir $F(p)$	№	Original $f(t)$	Tasvir $F(p)$
1	1	$\frac{1}{p}$	6	$e^{\alpha t} \cos \beta t$	$\frac{p - \alpha}{(p - \alpha)^2 + \beta^2}$
2	$\frac{t^n}{n!}$	$\frac{1}{p^{n+1}}$	7	$e^{\alpha t} \sin \beta t$	$\frac{\beta}{(p - \alpha)^2 + \beta^2}$
3	$e^{\alpha t}$	$\frac{1}{p - \alpha}$	8	$\frac{t^n}{n!} e^{\alpha t}$	$\frac{1}{(p - \alpha)^{n+1}}$
4	$\cos \beta t$	$\frac{p}{p^2 + \beta^2}$	9	$t \cdot \cos \beta t$	$\frac{p^2 - \beta^2}{(p^2 + \beta^2)^2}$
5	$\sin \beta t$	$\frac{\beta}{p^2 + \beta^2}$	10	$t \cdot \sin \beta t$	$\frac{2p\beta}{(p^2 + \beta^2)^2}$

1033. $f(t) = \begin{cases} 1, & \text{agar } t \geq 0, \\ 0, & \text{agar } t < 0, \end{cases}$ funksiyani tasvirini toping.

Yechish. (1) formulaga asosan:

$$F(p) = \int_0^\infty f(t) e^{-pt} dt = \int_0^\infty 1 \cdot e^{-pt} dt = \lim_{b \rightarrow \infty} \int_0^b e^{-pt} dt = \lim_{b \rightarrow \infty} \left(-\frac{1}{p} e^{-pt} \right) \Big|_0^b = \frac{1}{p}.$$

Demak, $1 \leftarrow \frac{1}{p}$ ekan.

1034. $f(t) = e^{\alpha t}$ funksiyani tasvirini toping.

Yechish. (1) formulaga asosan:

$$\begin{aligned} F(p) &= \int_0^\infty f(t) e^{-pt} dt = \int_0^\infty e^{\alpha t} \cdot e^{-pt} dt = \lim_{b \rightarrow \infty} \int_0^b e^{-(p-\alpha)t} dt = -\lim_{b \rightarrow \infty} \left(\frac{1}{p-\alpha} e^{-(p-\alpha)t} \right) \Big|_0^b = \\ &= \lim_{b \rightarrow \infty} \left(\frac{1}{p-\alpha} - \frac{e^{-(p-\alpha)b}}{p-\alpha} \right) = \frac{1}{p-\alpha}, \quad \operatorname{Re}(p-\alpha) > 0, \end{aligned}$$

Demak, $e^{\alpha t} \leftarrow \frac{1}{p-\alpha}$ ekan.

1035. $f(t) = \alpha^t$ funksiyani tasvirini toping.

Yechish. $f(t) = \alpha^t = e^{\ln \alpha t} = e^{t \ln \alpha}$ (3) formulaga asosan:

$$F(p) = e^{t \ln a} = \frac{1}{p - \ln a}, \quad a > 0,$$

Demak, $a' \leftarrow \frac{1}{p - \ln a}$ ekan.

1036. $f(t) = \cos^3 t$ funksiyaning tasvirini toping.

Yechish. Eyler formulasiga asosan: $\cos t = \frac{e^t + e^{-t}}{2}$. U holda

$$\begin{aligned}\cos^3 t &= \left(\frac{e^t + e^{-t}}{2} \right)^3 = \frac{1}{8} (e^{3t} + 3e^{t-t} + 3e^{-t-t} + e^{-3t}) = \\ &= \frac{1}{4} \frac{e^{3t} + e^{-3t}}{2} + \frac{3}{4} \frac{e^t + e^{-t}}{2} = \frac{1}{4} \cos 3t + \frac{3}{4} \cos t.\end{aligned}$$

(4) formulaga asosan,

$$F(p) = \frac{1}{4} \frac{p}{p^2 + 9} + \frac{3}{4} \frac{p}{p^2 + 1} = \frac{p(p^2 + 7)}{(p^2 + 1)(p^2 + 9)}.$$

1037. $f(t) = 2\sin 2t + 3\sinh 2t$ funksiyaning tasvirini toping.

Yechish. Berilgan funksiyani Eyler formulasiga ko'ra $f(t) = 2\sin 2t + \frac{3}{2}(e^{2t} - e^{-2t})$ ko'rinishda yozib olamiz. 1-xossa va (3), (5) formulalarga asosan

$$F(p) = \frac{4}{p^2 + 4} + \frac{3}{2} \left(\frac{1}{p-2} - \frac{1}{p+2} \right) = \frac{4}{p^2 + 4} + \frac{6}{p^2 - 4}$$

ekanini topamiz.

1038. $f(t) = \sinh bt$ funksiyaning tasvirini toping.

Yechish. Giperbolik sinus uchun Eyler formulasiga asosan: $\sinh bt = \frac{e^{bt} - e^{-bt}}{2} = \frac{1}{2}e^{bt} - \frac{1}{2}e^{-bt}$. U holda 2° xossani e'tiborga olib olsak,

$$F(p) = \frac{1}{2(p-b)} - \frac{1}{2(p+b)} = \frac{b}{p^2 - b^2}$$

ni topamiz.

1039. $f(t) = \sinh bt \sin bt$ funksiyaning tasvirini toping.

Yechish. Giperbolik sinus uchun Eyler formulasiga asosan:

$$\sinh bt = \frac{e^{bt} - e^{-bt}}{2} = \frac{1}{2}e^{bt} - \frac{1}{2}e^{-bt}, \quad f(t) = \frac{1}{2}e^{bt} \sin bt - \frac{1}{2}e^{-bt} \sin bt.$$

U holda (7) formulaga asosan:

$$F(p) = \frac{b}{2((p-a)^2 + b^2)} - \frac{b}{2((p+a)^2 + b^2)} = \frac{2pab}{[(p-a)^2 + b^2][(p+a)^2 + b^2]}.$$

1040. $f(t) = t \cdot chbt$ funksiyani tasvirini toping.

Yechish. Giperbolik kosinus uchun Euler formulasiga asosan:

$$chbt = \frac{e^b + e^{-b}}{2} = \frac{1}{2}e^b + \frac{1}{2}e^{-b}, \quad f(t) = \frac{1}{2}t \cdot e^b + \frac{1}{2}t \cdot e^{-b}.$$

U holda (8) formulaga asosan:

$$F(p) = \frac{1}{2(p-b)^2} + \frac{1}{2(p+b)^2} = \frac{p^2 + b^2}{(p^2 - b^2)^2}.$$

Quyidagi funksiyalarning tasvirlarini toping.

$$\begin{array}{lll} 1041. f(t) = \sin^2 t. & 1042. f(t) = e^t \cos^2 t. & 1043. f(t) = chbt. \end{array}$$

$$\begin{array}{lll} 1044. f(t) = t \cdot shbt. & 1045. f(t) = \sin t - \cos t. & 1046. f(t) = 3 + 2t. \end{array}$$

$$\begin{array}{lll} 1047. f(t) = \cos^2 t. & 1048. f(t) = (t-1)^2. & 1049. f(t) = \cos^2(t-1). \end{array}$$

$$\begin{array}{lll} 1050. f(t) = e^{-t} \cdot \cos 2t. & 1051. f(t) = e^{-t} \cdot t^3. & 1052. f(t) = \sin^3 t. \end{array}$$

$$\begin{array}{lll} 1053. f(t) = t \cdot \cos \omega t. & 1054. f(t) = e^t \cdot t^2. & 1055. f(t) = t^2 \cdot \cos t. \end{array}$$

$$1056*. f(t) = shat \cdot \cos bt. \quad 1057*. f(t) = chat \cdot \sin bt.$$

$$1058*. f(t) = chat \cdot \cos bt.$$

65-§. Funksiyaning tasviridan originalni topish

Operatsion hisobning asosiy masalalaridan biri $F(p)$ tasviriga mos $f(t)$ originalga o'tishdan iborat. Buning uchun:

1. Agar tasvir sodda kasr ko'rinishga ega bo'lsa, birdaniga tasvir jadvali yordamida asli topiladi.

2. Tasvirni sodda kasrga yoyib, so'ng tasvir jadvali yordamida asli topiladi.

3. Tasvir kasr ratsional ko'rinishda bo'lsa, ya'ni $F(p) = \frac{u(p^m)}{v(p^n)}$, $m < n$ va maxraj

$$v(p^n) = (p - p_1)^{k_1} (p - p_2)^{k_2} \dots (p - p_r)^{k_r}, \quad k_1 + k_2 + \dots + k_r = n,$$

bo'lsa, tasvir $A_{j,s}/(p - p_j)^{k_j-s+1}$ ko'rinishdagi sodda kasrga ajraydi, bunda $j \in \overline{1, r}$, $s \in \overline{1, k_j}$. U holda

$$F(p) = \sum_{j=1}^{n_r} \sum_{s=1}^{k_j} \frac{A_{j,s}}{(p - p_j)^{k_j-s+1}} \quad (2)$$

yoyilmaning barcha koeffitsiyentlarini quyidagi formula bilan aniqlanadi:

$$A_{j,s} = \frac{1}{(s-1)!} \lim_{p \rightarrow p_j} \left\{ \frac{d^{s-1}}{dp^{s-1}} \left[(p - p_j)^{k_j} \cdot F(p) \right] \right\}. \quad (3)$$

Agar maxrajning barcha ildizlari haqiqiy va butun sonlardan iborat bo'lsa, ya'ni

$$v(p^n) = (p - p_1)(p - p_2) \dots (p - p_n),$$

bo'lsa (3) yoyilma, quyidagi sodda ko'rinishda bo'ladi:

$$F(p) = \sum_{j=1}^{n_r} \frac{A_j}{p - p_j}, \quad A_j = \frac{u(p_j)}{v'(p_j)}. \quad (4)$$

Har ikki holda ham, ya'ni (2) yoki (4) formuladan foydalilaniganda ham, original quyidagi formula bilan topiladi:

a) mahraj $v(p)$ karrali ildizga ega bo'lganda:

$$f(t) = \sum_{j=1}^{n_r} \sum_{s=1}^{k_j} A_{j,s} \frac{t^{k_j-s}}{(k_j-s)!} e^{p_j t}; \quad (5)$$

b) maxraj $v(p)$ barcha ildizlari haqiqiy va butun sonlar bo'lganda:

$$f(t) = \sum_{j=1}^{n_r} \frac{u(p_j)}{v'(p_j)} e^{p_j t}. \quad (6)$$

Agar funksiyaning tasviri $1/p$ ning darajalari ko'rinishidagi qator bo'lsa, ya'ni

$$F(p) = \frac{a_0}{p} + \frac{a_1}{p^2} + \dots + \frac{a_{n-1}}{p^{n-1}} + \dots, \quad (7)$$

U holda original quyidagi formula bilan topiladi:

$$f(t) = a_0 + a_1 \cdot \frac{t}{1!} + a_2 \cdot \frac{t^2}{2!} + \dots + a_n \cdot \frac{t^n}{n!} + \dots \quad (8)$$

Bu darajali qator t ning barcha qiymatlari uchun yaqinlashevchi bo'ladi.

1059. $F(p) = \frac{4}{p} + \frac{3}{p^2} + \frac{5}{p+3}$ tasvirning originalini toping.

Yechish. Tasvir jadvaliga moslab olamiz:

$$F(p) = \frac{4}{p} + \frac{3}{p^2} + \frac{5}{p+3} = 4 \cdot \frac{1}{p} + \frac{3}{2} \cdot \frac{2!}{p^3} + 5 \cdot \frac{1}{p+3},$$

Tasvir jadvaliga asosan har birining aslini topamiz:

$$F(p) \longrightarrow 4 \cdot 1 + \frac{3}{2} \cdot t^2 + 5 \cdot e^{-3t} \Rightarrow f(t) = 4 + \frac{3t^2}{2} + 5e^{-3t}.$$

1060. $F(p) = \frac{1}{(p+1)(p^2+4)}$ tasvirning originalini toping.

Yechish. Tasvirni sodda kasrlarga yoyamiz:

$$F(p) = \frac{1}{(p+1)(p^2+4)} = \frac{A}{p+1} + \frac{Bp+C}{p^2+4}.$$

Noma'lum koeffitsiyentlarni

$$A(p^2+4) + (Bp+C)(p+1) = 1,$$

ayniyatdan o'zgaruvchilarning bir xil darajalari oldidagi koeffitsiyentlarini tenglab, topamiz:

$$A+B=0, \quad B+C=0, \quad 4A+C=1 \Rightarrow A=\frac{1}{5}, \quad B=-\frac{1}{5}, \quad C=\frac{1}{5}.$$

Demak,

$$F(p) = \frac{1}{5} \left(\frac{1}{p+1} - \frac{p}{p^2+2^2} + \frac{1}{2} \cdot \frac{2}{p^2+2^2} \right).$$

Tasvir jadvaliga asosan har birining aslini topamiz:

$$f(t) = \frac{1}{5} \left(e^{-t} - \cos 2t + \frac{1}{2} \sin 2t \right).$$

1061. $F(p) = \frac{p}{p^2-2p+5}$ tasvirning originalini toping.

Yechish. Tasvirni soddalashtirib, jadvalga moslaymiz:

$$\frac{p}{p^2-2p+5} = \frac{p-1+1}{(p-1)^2+4} = \frac{p-1}{(p-1)^2+4} + \frac{1}{(p-1)^2+4}.$$

(6) va (7) jadvalga asosan:

$$\frac{p-1}{(p-1)^2+4} \longrightarrow e^t \cdot \cos 2t, \quad \frac{1}{(p-1)^2+4} = \frac{1}{2} \frac{2}{(p-1)^2+4} \longrightarrow \frac{1}{2} e^t \cdot \sin 2t.$$

Demak,

$$\frac{p}{p^2-2p+5} \longrightarrow e^t \left(\cos 2t + \frac{1}{2} \sin 2t \right).$$

1062. $F(p) = \frac{1}{p^3-8}$ tasvirning originalini toping.

Yechish. Tasvirni soddalashtirib, sodda kasrlarga ajratamiz:

$$\frac{1}{p^3 - 8} = \frac{1}{(p-2)(p^2 + 2p + 4)} = \frac{A}{p-2} + \frac{Bp+C}{p^2 + 2p + 4}.$$

Noma'lum koefitsiyentlarni

$$A(p^2 + 2p + 4) + (Bp + C)(p - 2) = 1,$$

ayniyatdan o'zgaruvchilarning bir xil darajalari oldidagi koefitsiyentlarini tenglab, topamiz:

$$A + B = 0, \quad 2A - 2B + C = 0, \quad 4A - 2C = 1 \Rightarrow A = \frac{1}{12}, \quad B = -\frac{1}{12}, \quad C = -\frac{1}{3}.$$

Demak,

$$\frac{1}{p^3 - 8} = \frac{1}{12} \frac{1}{p-2} - \frac{1}{12} \frac{p+4}{p^2 + 2p + 4} = \frac{1}{12} \frac{1}{p-2} - \frac{1}{12} \frac{(p+1) + (\sqrt{3})^2}{(p+1)^2 + (\sqrt{3})^2}.$$

$$F(p) = \frac{1}{p^3 - 8} = \frac{1}{12} \cdot \frac{1}{p-2} - \frac{1}{12} \cdot \frac{p+1}{(p+1)^2 + (\sqrt{3})^2} - \frac{\sqrt{3}}{12} \cdot \frac{\sqrt{3}}{(p+1)^2 + (\sqrt{3})^2}.$$

Bundan (3), (6) va (7) jadvalga asosan quyidagini topamiz:

$$f(t) = \frac{1}{12} e^{2t} - \frac{1}{12} e^{-t} (\cos \sqrt{3}t + \sqrt{3} \sin \sqrt{3}t).$$

1063. $F(p) = \frac{p}{(p-1)^3 (p+2)^2}$ tasvirning originalini toping.

Yechish. Tasvimi (2) formula bo'yicha sodda kasrlarga yoyamiz:

$$F(p) = \frac{p}{(p-1)^3 (p+2)^2} = \frac{A_{1,1}}{(p-1)^3} + \frac{A_{1,2}}{(p-1)^2} + \frac{A_{1,3}}{p-1} + \frac{A_{2,1}}{(p+2)^2} + \frac{A_{2,2}}{p+2}.$$

(3) formula yordamida koefitsiyentlarni topamiz:

$$A_{1,1} = \frac{1}{0!} \lim_{p \rightarrow 1} [(p-1)^3 F(p)] = \lim_{p \rightarrow 1} \frac{p}{(p+2)^2} = \frac{1}{9},$$

$$A_{1,2} = \frac{1}{1!} \lim_{p \rightarrow 1} \frac{d}{dp} [(p-1)^3 F(p)] = \lim_{p \rightarrow 1} \frac{d}{dp} \left[\frac{p}{(p+2)^2} \right] =$$

$$= \lim_{p \rightarrow 1} \frac{d}{dp} \left[\frac{1}{(p+2)^2} - \frac{2p}{(p+2)^3} \right] = \frac{1}{27},$$

$$A_{1,3} = \frac{1}{2!} \lim_{p \rightarrow 1} \frac{d^2}{dp^2} [(p-1)^3 F(p)] = \frac{1}{2} \lim_{p \rightarrow 1} \frac{d^2}{dp^2} \left[\frac{p}{(p+2)^2} \right] =$$

$$= \frac{1}{2} \lim_{p \rightarrow 1} \left[-\frac{4}{(p+2)^3} + \frac{6p}{(p+2)^3} \right] = -\frac{1}{27},$$

$$A_{2,1} = \frac{1}{0!} \lim_{p \rightarrow 1} \left[(p+2)^2 F(p) \right] = \lim_{p \rightarrow 1} \frac{p}{(p-1)^3} = \frac{2}{27},$$

$$\begin{aligned} A_{2,2} &= \frac{1}{1!} \lim_{p \rightarrow 1} \frac{d}{dp} \left[(p+2)^2 F(p) \right] = \lim_{p \rightarrow 1} \frac{d}{dp} \left[\frac{p}{(p-1)^3} \right] = \\ &= \lim_{p \rightarrow 1} \left[\frac{1}{(p-1)^3} - \frac{3p}{(p-1)^4} \right] = \frac{1}{27}. \end{aligned}$$

Shunday qilib,

$$F(p) = \frac{1}{27} \left[\frac{3}{(p-1)^3} + \frac{1}{(p-1)^2} - \frac{1}{p-1} + \frac{2}{(p+2)^2} + \frac{1}{p+2} \right].$$

Bundan (3) va (8) jadvalga asosan quyidagini topamiz:

$$f(t) = \frac{1}{27} \left[\frac{3}{2} t^2 e^t + te^t - e^t + 2te^{-2t} + e^{-2t} \right] = \frac{3t^2 + 2t - 2}{54} e^t + \frac{2t + 1}{27} e^{-2t}.$$

1064. $F(p) = \frac{p+1}{p(p-1)(p-2)(p-3)}$ tasvirning originalini toping.

Yechish. Tasvir maxrajining ildizlari haqiqiy va butun bo'lgani uchun (6) formuladan foydalanish qulay.

$$u(p) = p+1, \quad v(p) = p(p-1)(p-2)(p-3) = p^4 - 6p^3 + 11p^2 - 6p,$$

$$v'(p): p_1 = 0, \quad p_2 = 1, \quad p_3 = 2, \quad p_4 = 3; \quad v'(p) = 4p^3 - 18p^2 + 22p - 6.$$

$$\frac{u(p_1)}{v'(p_1)} = \frac{1}{-6} = -\frac{1}{6}, \quad \frac{u(p_2)}{v'(p_2)} = \frac{2}{2} = 1, \quad \frac{u(p_3)}{v'(p_3)} = \frac{3}{-2} = -\frac{3}{2}, \quad \frac{u(p_4)}{v'(p_4)} = \frac{4}{6} = \frac{2}{3}.$$

$$f(t) = \sum_{j=1}^{j=4} \frac{u(p_j)}{v'(p_j)} e^{p_j t} = -\frac{1}{6} e^t + \frac{3}{2} e^{2t} + \frac{2}{3} e^{3t}.$$

1065. $F(p) = \frac{1}{p(1+p^4)}$ tasvirning originalini toping.

Yechish. Tasvirni $\frac{1}{p}$ ning darajalari ko'rinishidagi qatorga keltirish mumkin bo'lgani uchun uni (7) formulaga keltiramiz:

$$F(p) = \frac{1}{p(1+p^4)} = \frac{1}{p^5} \cdot \frac{1}{1 + \frac{1}{p^4}} = \frac{1}{p^5} - \frac{1}{p^9} + \frac{1}{p^{13}} - \dots$$

Bu qator $|p| > 1$ da yaqinlashuvchi bo'lgani uchun funksiyaning originalini (8) formula yordamida topamiz:

$$f(t) = \frac{t^4}{4!} - \frac{t^8}{8!} + \frac{t^{12}}{12!} - \frac{t^{16}}{16!} \dots$$

Quyidagi tasvirlari berilgan funksiyalarning originalini toping.

$$1066. F(p) = \frac{1}{p(p^2+1)(p^2+4)}$$

$$1067. F(p) = \frac{1}{(p-1)(p^2-4)}$$

$$1068. F(p) = \frac{p+3}{p(p^2-4p+3)}$$

$$1069. F(p) = \frac{1}{p(p^4-4p+3)}$$

$$1070. F(p) = \frac{3p-2}{p^2-4}$$

$$1071. F(p) = \frac{p}{p^2+2p+2}$$

$$1072. F(p) = \frac{1}{p+2p^2+p^3}$$

$$1073. F(p) = \frac{1}{p^2(p^2+1)}$$

$$1074. F(p) = \frac{2p+3}{5p+4p^2+p^3}$$

$$1075. F(p) = \frac{1}{(p-1)p^3}$$

$$1076. F(p) = \frac{p}{(p^2-4)(p^2+1)}$$

$$1077. F(p) = \frac{p}{p^3+1}$$

$$1078. F(p) = \frac{2p^3+p^2+2p-1}{p^4-1}$$

$$1079. F(p) = \frac{p^3+p^2-1}{p^4-p^2}$$

$$1080*. F(p) = \frac{p^2-2p-1}{p^3-3p^2+3p-1}$$

$$1081*. F(p) = \frac{2p^3+p^2+2p+2}{p^5+2p^4+2p^3}$$

66-§. Originalni differensiallash va integrallash

Ta’rif. $f(t)$ va $g(t)$ funksiyalarning o’ramasi deb, quyidagi integralga aytildi:

$$(f * g)(t) = \int_0^t f(\tau)g(t-\tau)d\tau. \quad (9)$$

Teorema. Agar $F_1(p) \rightarrow f_1(t)$ va $F_2(p) \rightarrow f_2(t)$ bo’lsa,
 $F_1(p)F_2(p) \rightarrow f * f(t)$ (10)

bo’ladi.

Teorema. Agar $F_1(p)F_2(p) \rightarrow f * f(t)$ va $f_1'(t)$ original bo’lsa,

$$pF_1(p)F_2(p) \rightarrow \int_0^t f_1'(\tau)f_2(t-\tau)d\tau + f_1(0)f_2(t) \quad (11)$$

bo'ladi. (11) Dyuamel formulasi deb nomlangan.

1082. $F(p) = \frac{p}{p^4 - 1}$ tasvirning originalini o'rama formulasi yordamida toping.

Yechish. Tasvirni ko'paytma shakliga keltiramiz:

$$F(p) = \frac{p}{p^4 - 1} = \frac{p}{p^2 - 1} \cdot \frac{1}{p^2 + 1} \Rightarrow \frac{p}{p^2 - 1} \rightarrow cht, \quad \frac{1}{p^2 + 1} \rightarrow \sin t.$$

Bundan funksiyaning originalini (9) formula yordamida topamiz:

$$\frac{p}{p^4 - 1} \rightarrow \int_0^t ch(t - \tau) \sin \tau d\tau = -\frac{1}{2} \left[sh(t - \tau) \sin \tau + ch(t - \tau) \cos \tau \right]_0^t = \\ = \frac{1}{2} (cht - \cos t).$$

1083. $F(p) = \frac{1}{(p^2 + a^2)^2}$ tasvirning originalini o'rama formulasi yordamida toping.

Yechish. Tasvirni ko'paytma shakliga keltiramiz:

$$F(p) = \frac{1}{(p^2 + a^2)^2} = \frac{1}{p^2 + a^2} \cdot \frac{1}{p^2 + a^2} \Rightarrow \frac{1}{p^2 + a^2} \rightarrow \frac{1}{a} \sin at.$$

Bundan funksiyaning originalini (9) formula yordamida topamiz:

$$\frac{1}{(p^2 + a^2)} \rightarrow \int_0^t \frac{1}{a} \sin at \frac{1}{a} \sin a(t - \tau) d\tau = \frac{1}{2a^2} \int_0^t [\cos a\tau - \cos a(2t - \tau)] d\tau = \\ = \frac{1}{2a^2} \left[\frac{1}{a} \sin a\tau + \frac{1}{a} \sin a(2t - \tau) \right]_0^t = \frac{1}{a^3} \sin at (1 - \cos at).$$

1084. $F(p) = \frac{2p^2}{(p^2 + 1)^2}$ tasvirning originalini Dyuamel formulasi yordamida toping.

Yechish. Tasvirni ko'paytma shakliga keltiramiz:

$$F(p) = \frac{2p^2}{(p^2 + 1)^2} = 2p \frac{1}{p^2 + 1} \cdot \frac{p}{p^2 + 1} \Rightarrow \frac{1}{p^2 + 1} \rightarrow \sin t, \quad \frac{p}{p^2 + 1} \rightarrow \cos t.$$

(11) formulaga asosan:

$$F(p) = 2p \cdot \frac{1}{p^2 + 1} \cdot \frac{p}{p^2 + 1} \longrightarrow 2 \int_0^p \cos \tau \cos(t - \tau) d\tau + 0 = \\ = \int_0^p \cos t d\tau + \int_0^p \cos(2\tau - t) d\tau = \cos t \cdot \tau \Big|_0^p + \frac{1}{2} \sin(2\tau - t) \Big|_0^p = t \cos t + \sin t.$$

Quyidagi tasvirning originalini o'rama formulasi yordamida toping.

$$1085. F(p) = \frac{p}{p^4 - 1}.$$

$$1086. F(p) = \frac{1}{p^3(p-1)}.$$

$$1087. F(p) = \frac{1}{(p^2+1)(p^2+9)}.$$

$$1088. F(p) = \frac{p}{p^3(p^2+1)}.$$

$$1089. F(p) = \frac{13p^2 + 22}{(p^2+1)(p^2+4)}.$$

$$1090. F(p) = \frac{-5p^4 + 6p^2 + 150}{p^4(p^2 + 25)}.$$

$$1091. F(p) = \frac{2p^2}{p^4 - 1}.$$

$$1092*. F(p) = \frac{p^5 + 2p^4 - 4p^3 - 10p^2 + 24}{p^4(p^2 - 4)}.$$

Quyidagi tasvirning originalini Dyuamel formulasi yordamida toping.

$$1093. F(p) = \frac{p^3}{(p^2+1)^2}.$$

$$1094. F(p) = \frac{p}{(p^2+1)(p^2+4)}.$$

$$1095. F(p) = \frac{p(p^2+6)}{(p^2+9)^2}.$$

$$1096. F(p) = \frac{-16p}{(p^2+9)(p^2+25)}.$$

$$1097. F(p) = \frac{p}{(p^2+1)(p-1)}.$$

$$1098*. F(p) = \frac{p}{(p^2+1)(p^2+2p+2)}.$$

67-§. O'zgarmas koefitsiyentli chiziqli differensial tenglamani operatsion hisob yordamida yechish

Originalning differensiali uchun quyidagi formulalar orinli:

Agar $F(p) \longrightarrow f(t)$ bo'sha:

$$pF(p) - f(0) \longrightarrow f'(t),$$

$$p^2F(p) - pf(0) - f'(0) \longrightarrow f''(t),$$

(12)

$$\dots$$

$$p^nF(p) - p^{n-1}f(0) - \dots - f'(0) \longrightarrow f^{(n-1)}(t).$$

O'zgarmas koeffitsiyentli chiziqli bir jinsli bo'limgan differensial tenglamani

$$y^{(n)} + a_1 y^{(n-1)} + \dots + a_n y = f(t) \quad (13)$$

$$y(0) = y_0, \quad y'(0) = y'_0, \dots, \quad y^{(n-1)}(0) = y_0^{(n-1)} \quad (14)$$

boshlang'ich shartlarni qanoatlantiruvchi yechimini topish talab qilinsin.

Quyidagi belgilashlarni kiritamiz:

$$y(t) \leftarrow Y(p) = Y \text{ va } f(t) \leftarrow F(p) = F.$$

Laplas almashtirishining originalni differensiallash va chiziqlilik xossalardan foydalanim, (13) tenglamani har ikki tomonini tasvirini topamiz:

$$\left(p^n Y - p^{n-1} y_0 - p^{n-2} y'_0 - \dots - y_0^{(n-1)} \right) + a_1 \left(p^{n-1} Y - p^{n-2} y_0 - p^{n-3} y'_0 - \dots - y_0^{(n-2)} \right) + \dots + a_n (pY - y'_0) + a_n Y = F.$$

Bu tenglamaga operator tenglama deyiladi. Uni Y ga nisbatan yechib,

$$Y \left(p^n - p^{n-1} a_1 - \dots - p a_{n-1} + a_n \right) = F + \\ + y_0 \left(p^{n-1} + p^{n-2} a_1 + \dots + a_{n-1} \right) + y'_0 \left(p^{n-2} + p^{n-3} a_1 + \dots + a_{n-2} \right) + \dots + y_0^{(n-1)},$$

yoki

$$Y(p) \cdot Q_n(p) = F(p) + R_{n-1}(p),$$

ni topamiz, bu yerda $Q_n(p)$, $R_{n-1}(p)$ mos ravishda p ning n va $n-1$ darajali ko'phadlari.

Oxirgi tenglikdan $Y(p)$ ni topamiz:

$$Y(p) = \frac{F(p) + R_{n-1}(p)}{Q_n(p)}. \quad (15)$$

Bu tenglikni (13) differensial tenglamaning operator yechimi deyiladi. Bu tenglamadan $Y(p)$ ga mos $y(t)$ ni topsak, yechim hosil bo'ladi. Agar (14) boshlang'ich shartlar bir jinsli, ya'ni 0 bo'lsa, $R_{n-1}(p) = 0$ bo'ladi.

1099. $y'' - 2y' - 3y = e^y$ tenglamani $y(0) = 0$, $y'(0) = 0$ boshlang'ich shartlarni qanoatlantiruvchi yechimini Laplas tasviri yordamida toping.

Yechish. Tenglamani har ikki tomonini tasvirini topamiz:

$$p^2Y - py(0) - y'(0) - 2[pY - y(0)] - 3Y = \frac{1}{p-3} \Rightarrow p^2Y - 2pY - 3Y = \frac{1}{p-3}$$

$$\Rightarrow Y(p) = \frac{1}{(p+1)(p-3)^2}.$$

Tasvirdan originalga o'tish uchun, sodda kasrlarga yoyamiz:

$$\frac{1}{(p+1)(p-3)^2} = \frac{A}{(p-3)^2} + \frac{B}{p-3} + \frac{C}{p+1} \Rightarrow$$

$$1 = A(p+1) + B(p-3)(p+1) + C(p-3)^2.$$

$$p=-1 \text{ bo'lsa, } 1=16C \Rightarrow C=\frac{1}{16}, \quad p=3 \text{ bo'lsa, } 1=4A \Rightarrow A=\frac{1}{4},$$

$$p^2 \text{ oldidagi koefitsiyentlarni tenglab, } 0=B+C \Rightarrow B=-C=-\frac{1}{16}.$$

U holda

$$Y(p) = \frac{1}{4(p-3)^2} - \frac{1}{16(p-3)} + \frac{1}{16(p+1)}.$$

Originalga o'tib, quyidagi yechimni hosil qilamiz:

$$y(t) = \frac{1}{4}te^{\frac{t}{4}} - \frac{1}{16}e^{\frac{t}{4}} + \frac{1}{16}e^{-\frac{t}{4}}.$$

1100. $y'' + y' - 2y = e^{-t}$ tenglamani $y(0)=0, y'(0)=1$ boshlang'ich shartlarni qanoatlantiruvchi yechimini Laplas tasviri yordamida toping.

Yechish. Tenglamaning har ikki tomonini tasvirini topamiz:

$$p^2Y - py(0) - y'(0) + [pY - y(0)] - 2Y = \frac{1}{p+1} \Rightarrow p^2Y - 1 + pY - 2Y = \frac{1}{p+1}$$

$$\Rightarrow Y(p) = \frac{p+2}{(p+1)(p^2+p-2)} = \frac{p+2}{(p+1)(p+2)(p-1)} = \frac{1}{p^2-1} \Rightarrow y(t) = \text{sh}t.$$

1101- misol. $y'' + 2y' + y = te^{-t}$ tenglamani $y(0)=1, y'(0)=2$ boshlang'ich shartlarni qanoatlantiruvchi yechimini Laplas tasviri yordamida toping.

Yechish. Tenglamani (15) formula yordamida yechamiz:

$$Q_2(p) = p^2 + a_1p + a_2 \Rightarrow p^2 + 2p + 1 = (p+1)^2,$$

$$R_1(p) = y(0)(p+a_1) + y'_0 = p+2+2=p+4, \quad F(p) = \frac{1}{(p+1)^2}.$$

U holda (15) formulaga asosan:

$$Y(p) = \frac{F(p) + R_{n-1}(p)}{Q_n(p)} = \frac{\frac{1}{(p+1)^2} + (p+4)}{(p+1)^2} = \frac{1}{(p+1)^4} + \frac{p+4}{(p+1)^2}.$$

Bundan

$$Y(p) = \frac{1}{(p+1)^4} + \frac{p+1+3}{(p+1)^2} = \frac{1}{p+1} + \frac{3}{(p+1)^2} + \frac{1}{(p+1)^4}.$$

Demak,

$$y(t) = e^{-t} + 3te^{-t} + \frac{1}{6}t^3e^{-t}.$$

1102-misol. $y'' - 2y' + 2y = 2e^t \cos t$ tenglamani $y(0) = 0$, $y'(0) = 0$ boshlang'ich shartlarni qanoatlantiruvchi yechimini Laplas tasviri yordamida toping.

Yechish. Tenglamani (15) formula yordamida yechamiz:

$$Q_2(p) = p^2 + a_1p + a_2 \Rightarrow p^2 - 2p + 2 = (p-1)^2 + 1,$$

$$R_1(p) = y(0)(p + a_1) + y'_0 = 0, F(p) = 2 \frac{p-1}{(p-1)^2 + 1}.$$

U holda (15) formulaga asosan

$$Y(p) = \frac{2 \frac{p-1}{(p-1)^2 + 1}}{(p-1)^2 + 1} = \frac{2(p-1)}{[(p-1)^2 + 1]^2}.$$

Bundan, jadvalga va siljish xossasiga asosan:

$$y(t) = te^t \sin t.$$

Quyidagi Kosh masalasini Laplas tasviri yordamida yeching

1103. $y' - 2y = 0$, $y(0) = 1$.

1104. $y' + y = e^t$, $y(0) = 0$.

1105. $y'' - 9y = 0$, $y(0) = y'(0) = 0$.

1106. $y'' + y' - 2y = e^t$, $y(0) = -1$, $y'(0) = 0$.

1107. $y'' + y' - 2y = 1$, $y(0) = 0$, $y'(0) = 2$.

1108. $y'' - y' - 6y = 4$, $y(0) = 1$, $y'(0) = 0$.

1109. $y'' + y' - 2y = e^{-t}$, $y(0) = 0$, $y'(0) = 1$.

1110. $y'' - 2y' + y = e^t$, $y(0) = 0$, $y'(0) = 1$.

1111. $y'' + y = \cos t$, $y(0) = -1$, $y'(0) = 1$.

1112. $y'' + y' + y = \sin t$, $y(0) = 0$, $y'(0) = -1$.

$$1113. \quad y'' - y = 2sht, \quad y(0) = 0, \quad y'(0) = 1.$$

$$1114. \quad y'' + y' = cht, \quad y(0) = 0, \quad y'(0) = 0.$$

$$1115. \quad y''' - y'' = e^t, \quad y(0) = 1, \quad y'(0) = 1, \quad y''(0) = 0.$$

$$1116*. \quad y''' - 3y'' + 3y' - y = 0, \quad y(0) = 1, \quad y'(0) = 0, \quad y''(0) = 0.$$

$$1117*. \quad y''' - 6y'' + 11y' - 6y = 0, \quad y(0) = 0, \quad y'(0) = 1, \quad y''(0) = 0.$$

68-§. O‘zgarmas koeffitsiyentli chiziqli differensial tenglamalar sistemasini va integral tenglamani operatsion hisob yordamida yechish

Agar $F(p) \rightarrow f(t)$ bo‘lsa, originalni **integrali** uchun quyidagi formula o‘rinli:

$$\frac{F(p)}{p} \xrightarrow[0]{} \int_0^t f(\tau) d\tau. \quad (16)$$

O‘zgarmas koeffitsiyentli chiziqli bir jinsli differensial tenglamalar sistemasi

$$\begin{cases} x' = a_1x + b_1y, & x(0) = x_0, \\ y' = a_2x + b_2y, & y(0) = y_0, \end{cases} \quad (17)$$

uchun Koshi masalasini yechimini topish talab etilsin.

Hosilani tasviri formulasiga asosan:

$$\begin{aligned} x(t) &\longleftarrow X(P), \quad y(t) \longleftarrow Y(P) \text{ bo‘lsa,} \\ x' &\longleftarrow p \cdot X - x(0), \quad x'' \longleftarrow p^2 \cdot X - p \cdot x(0) - x'(0), \\ y' &\longleftarrow p \cdot Y - Y(0) \quad y'' \longleftarrow p^2 \cdot Y - p \cdot y(0) - y'(0). \end{aligned} \quad (18)$$

Yuqoridagi kabi tasvirdan foydalanib, quyidagini topamiz:

$$\begin{cases} X - x_0 = a_1X + b_1Y, \\ Y - y_0 = a_2X + b_2Y. \end{cases}$$

Sistemani yechib,

$$X(P) = \frac{(p - b_2)x_0 + b_1y_0}{(p - a_1)(p - b_2) - a_2b_1}, \quad Y(P) = \frac{(p - a_1)y_0 + a_2x_0}{(p - a_1)(p - b_2) - a_2b_1}. \quad (19)$$

Natijani originalini topib, sistemani yechimini hosil qilamiz.

1118. $y = \int_0^t ydt + 1$ integral tenglamani Laplas tasviri yordamida yeching.

Yechish. Tenglamani har ikki tomonidan tasvir olamiz, (16) formuladan foydalanib integralni tasvirini topamiz:

$$Y = \frac{Y}{p} + \frac{1}{p} \Rightarrow Y(p-1) = 1 \Rightarrow Y = \frac{1}{p-1}.$$

Demak,

$$y(t) = e^t.$$

1119. $\int_0^t y(\tau) \sin(t-\tau) d\tau = 1 - \cos t$ integral tenglamani Laplas tasviri yordamida yeching.

Yechish. Tenglamani har ikki tomonidan tasvir olamiz, chap tomonda $y(t)$ va $\sin t$ funksiyalarning o'ramasi ishtiroy etmoqda. (10) formuladan foydalanamiz. O'ng tomonni tasvirini topsak, quyidagi ifoda hosil bo'ladi:

$$Y \cdot \frac{1}{p^2+1} = \frac{1}{p} - \frac{p}{p^2+1} \Rightarrow Y \cdot \frac{1}{p^2+1} = \frac{1}{(p^2+1)p} \Rightarrow Y = \frac{1}{p}.$$

Demak,

$$y(t) = 1.$$

1120. $\int_0^t y(\tau) e^{-\tau} d\tau = y(t) - e^t$ integral tenglamani Laplas tasviri yordamida yeching.

Yechish. Tenglamani har ikki tomonidan tasvir olamiz, chap tomonda $y(t)$ va e^{-t} funksiyalarning o'ramasi ishtiroy etmoqda. (10) formuladan foydalanamiz. O'ng tomonni tasvirini topsak, quyidagi ifoda hosil bo'ladi:

$$Y \cdot \frac{1}{p-1} = Y - \frac{1}{p-1} \Rightarrow Y \cdot \left(1 - \frac{1}{p-1}\right) = \frac{1}{p-1} \Rightarrow Y \cdot \frac{p-2}{p-1} = \frac{1}{p-1} \Rightarrow Y = \frac{1}{p-2}.$$

Demak,

$$y(t) = e^{2t}.$$

1121. $\begin{cases} x' = x + 2y, \\ y' = 2x + y + 1, \end{cases}$ tenglamalar sistemasini $x(0)=0, y(0)=5$

boshlang'ich shartlarni qanoatlantiruvchi yechimini Laplas tasviri yordamida toping.

Yechish. Sistemaning har ikki tenglamasini tasvirini topamiz, buning uchun (18) formuladan foydalanamiz:

$$\begin{cases} p \cdot X - 0 = X + 2Y, \\ pY - 5 = 2X + Y + \frac{1}{p}. \end{cases}$$

Sistemani (19) ko'rinishdagi $X(p)$ va $Y(p)$ yechimi quyidagi ko'rinishda bo'ladi:

$$X(p) = \frac{10p+2}{p(p+1)(p-3)}, \quad Y(p) = \frac{5p^2-4p-1}{p(p+1)(p-3)}.$$

$X(p)$ ning tasviridagi maxrajning ildizlari butun bo'lgani uchun, originalni topishda (6) formuladan foydalanish qulay.

$$u(p) = 10p+2, \quad v(p) = p(p+1)(p-3) = p^3 - 2p^2 - 3p$$

$$v'(p): p_1 = 0, \quad p_2 = -1, \quad p_3 = 3; \quad v'(p) = 3p^2 - 4p - 3.$$

$$\frac{u(p_1)}{v'(p_1)} = \frac{u(0)}{v'(0)} = -\frac{2}{3}, \quad \frac{u(p_2)}{v'(p_2)} = \frac{u(-1)}{v'(-1)} = -2, \quad \frac{u(p_3)}{v'(p_3)} = \frac{u(3)}{v'(3)} = \frac{8}{3}.$$

$$x(t) = \sum_{j=1}^{j=3} \frac{u(p_j)}{v'(p_j)} e^{p_j t} = -\frac{2}{3} - 2e^{-t} + \frac{8}{3}e^{3t}.$$

$Y(p)$ ning tasviridagi maxrajning ildizlari butun bo'lgani uchun (6) formuladan foydalanamiz:

$$u_1(p) = 5p^2 - 4p - 1, \quad v(p) = p(p+1)(p-3) = p^3 - 2p^2 - 3p$$

$$v'(p): p_1 = 0, \quad p_2 = -1, \quad p_3 = 3; \quad v'(p) = 3p^2 - 4p - 3.$$

$$\frac{u_1(p_1)}{v'(p_1)} = \frac{u_1(0)}{v'(0)} = \frac{1}{3}, \quad \frac{u_1(p_2)}{v'(p_2)} = \frac{u_1(-1)}{v'(-1)} = \frac{8}{4} = 2, \quad \frac{u_1(p_3)}{v'(p_3)} = \frac{u_1(3)}{v'(3)} = \frac{32}{12} = \frac{8}{3}.$$

$$y(t) = \sum_{j=1}^{j=3} \frac{u_1(p_j)}{v'(p_j)} e^{p_j t} = \frac{1}{3} + 2e^{-t} + \frac{8}{3}e^{3t}.$$

Demak, sistemaning yechimi:

$$\begin{cases} x(t) = -\frac{2}{3} - 2e^{-t} + \frac{8}{3}e^{3t}, \\ y(t) = \frac{1}{3} + 2e^{-t} + \frac{8}{3}e^{3t}. \end{cases}$$

1122. $\begin{cases} x'' - y' = 0, \\ x' - y'' = 2 \cos t, \end{cases}$ tenglamalar sistemasini $x(0) = 0, x'(0) = 2, y(0) = 2, y'(0) = 0$ boshlang'ich shartlarni qanoatlantiruvchi yechimi ni Laplas tasviri yordamida yeching.

Yechish. Sistemaning har ikki tenglamasini tasvirini topamiz, buning uchun (18) formuladan va tasvir jadvalidan foydalanamiz:

$$x' \leftarrow p \cdot X - x(0) = p \cdot X, \quad x'' \leftarrow p^2 \cdot X - p \cdot x(0) - x'(0) = p^2 \cdot X - 2,$$

$$y' \leftarrow p \cdot Y - Y(0) = p \cdot Y - 2, \quad y'' \leftarrow p^2 \cdot Y - p \cdot y(0) - y'(0) = p^2 \cdot Y - 2p.$$

Topilganlarni sistemaga $X(p)$ va $Y(p)$ ga nisbatan chiziqli operator tenglamalar sistemasini hosil qilamiz:

$$\begin{cases} p^2 X - 2 - pY + 2 = 0, \\ pX - p^2 Y + 2p = 2 \frac{p}{p^2 + 1}, \end{cases} \Rightarrow \begin{cases} pX - Y = 0, \\ X - pY = -2 \frac{p^2}{p^2 + 1}. \end{cases}$$

Bu algebraik tenglamalar sistemasini yechib:

$$X(p) = \frac{2p^2}{p^4 - 1} = \frac{1}{p^2 - 1} + \frac{1}{p^2 + 1},$$

$$Y(p) = \frac{2p^3}{p^4 - 1} = \frac{p}{p^2 - 1} + \frac{p}{p^2 + 1},$$

ekanini topdik. Endi tasvirlar jadvaliga asosan:

$$x(t) = sh t + sint, \quad y(t) = cht + cost.$$

1123. $\begin{cases} x' = y - z, \\ y' = x + y, \\ z' = x + z, \end{cases}$ tenglamalar sistemasini $\begin{cases} x(0) = 1, \\ y(0) = 2, \\ z(0) = 3, \end{cases}$ boshlang'ich

shartlarni qanoatlantiruvchi yechimini Laplas tasviri yordamida toping.

Yechish. Sistemaning har ikki tenglamasini tasvirini topamiz, buning uchun (18) formuladan va tasvirlari jadvalidan foydalanamiz:

$$x' \leftarrow p \cdot X - x(0) = p \cdot X - 1,$$

$$y' \leftarrow p \cdot Y - y(0) = p \cdot Y - 2,$$

$$z' \leftarrow p \cdot Z - z(0) = p \cdot Z - 3,$$

Topilganlarni sistemaga $X(p)$ va $Y(p)$, $Z(p)$ larga nisbatan chiziqli operator tenglamalar sistemasini hosil qilamiz:

$$\begin{cases} pX - 1 = Y - Z, \\ pY - 2 = X + Y, \\ pZ - 3 = X + Z \end{cases} \Rightarrow \begin{cases} pX - Y - Z = 1, \\ X - (p-1)Y = -2, \\ X + (1-p)Z = -3. \end{cases}$$

Bu algebraik tenglamalar sistemasini yechib:

$$X(p) = \frac{p-2}{p(p-1)} = \frac{2}{p} - \frac{1}{p-1}, \quad Y(p) = \frac{2p^2-p-2}{p(p-1)^2} = -\frac{2}{p} + \frac{4}{p-1} - \frac{1}{(p-1)^2},$$

$$Z(p) = \frac{3p^2-2p-2}{p(p-1)^2} = -\frac{2}{p} + \frac{5}{p-1} - \frac{1}{(p-1)^2},$$

ekanini topdik. Endi tasvirlar jadvaliga ko'ra:

$$x(t) = 2 - e^t, \quad y(t) = -2 + 4e^t - te^t, \quad z(t) = -2 + 5e^t - te^t.$$

Quyidagi integral tenglamani Laplas tasviri yordamida yeching

1124. $y = \int_0^t y dt + 8.$

1125. $\int_0^t y(\tau)(t-\tau)^3 d\tau = t^4.$

1126. $\int_0^t y(\tau)e^{t-\tau} d\tau = y(t) + e^{st}.$

1127. $\int_0^t y(\tau)\cos(3t-\tau) d\tau = 1 - \cos 3t.$

1128. $\int_0^t y(\tau)(t-\tau)^2 d\tau = \frac{1}{3}t^3.$

1129. $\int_0^t y(\tau)\cos(t-\tau) d\tau = 1 - \cos t.$

Quyidagi sistema uchun Koshi masalasini Laplas tasviri yordamida yeching

1130. $\begin{cases} x' = 2y, & x(0) = 2, \\ y' = 2x, & y(0) = 2. \end{cases}$

1131. $\begin{cases} x' = 3x + 4y, & x(0) = 1, \\ y' = 4x - 3y, & y(0) = 1. \end{cases}$

1132. $\begin{cases} x' - 3x - 4y = 0, & x(0) = 1, \\ y' - 4x + 3y = 0, & y(0) = 1. \end{cases}$

1133. $\begin{cases} x' - y + x = 0, & x(0) = 1, \\ y' + 3y + x = 0, & y(0) = 1. \end{cases}$

1134. $\begin{cases} x' + y = 2e^t, & x(0) = 1, \\ y' + x = 2e^t, & y(0) = 1. \end{cases}$

$$1135. \begin{cases} x' + x - y = e^t, & x(0) = 1, \\ y' + y - x = e^t, & y(0) = 1. \end{cases}$$

$$1136. \begin{cases} x'' - y' = e^t, & x(0) = x'(0) = 0, \\ x' + y'' - y = 0, & y(0) = y'(0) = 0. \end{cases}$$

$$1137. \begin{cases} 2x'' + x - y' = -3\sin t, & x(0) = 0, \quad x'(0) = 1, \\ x + y' = -\sin t, & y(0) = 0. \end{cases}$$

$$1138. \begin{cases} x' = y + z, & x(0) = -1, \\ y' = x + z, & y(0) = 1, \\ z' = x + y, & z(0) = 0. \end{cases}$$

$$1139*. \begin{cases} x' + y = t, & x(0) = 1, \\ y' + z = t^2 + 1, & y(0) = 0, \\ z' + x = 2t + 1, & z(0) = 0. \end{cases}$$

IX BOB. EHTIMOLLAR NAZARIYASI VA MATEMATIK STATISTIKA ELEMENTLARI

69-§. Kombinatorika elementlari. Nyuton binomi

Kombinatorika-matematikaning berilgan obyektlardan u yoki bu shartlarni qanoatlantiruvchi kombinatsiyalar tuzish mumkinligini o'rghanuvchi bo'limidir.

1-ta'rif. To'plamlar va ularning qism to'plamlarini tuzish usullarini hamda miqdorlarini o'rghanuvchi fan kombinatorika deyiladi.

2-ta'rif. Butun manfiy bo'Imagan sonlar uchun aniqlangan $n!$ funksiya faktorial deyiladi. Har qanday natural n soni uchun $n!$ funksiya 1 dan n gacha bo'lgan ketma-ket natural sonlar ko'paytmasiga teng, ya'ni

$$n! = 1 \cdot 2 \cdot 3 \cdots \cdot n.$$

Qulaylik uchun ta'rifga ko'ra $0!=1$, $1!=1$ deb olinadi. Faktorial, qatorlar va kombinatorika masalalarida ko'p uchraydi.

n ortishi bilan $n!$ funksiya juda tez o'sadi. Masalan, $1!=1$, $2!=2$, $3!=6$, $4!=24$, $5!=120$ va hokazo.

Agar to'plamda tartib munosabati kiritilgan bo'lsa, ya'ni to'plamning qaysi elementi qaysi elementdan keyin kelishi yoki qaysinisidan oldin kelishi aniqlangan bo'lsa, bunday to'plam tartiblangan to'plam deyiladi. Agar tartiblangan to'plamda elementlarning joylashish tartibi o'zgartirilsa, dastlabki to'plamdan farqli yangi to'plam hosil bo'ladi.

O'rinalashtirish. n ta elementdan iborat to'plamning tartiblangan k elementidan iborat tartiblangan qism to'plamlarga, n ta elementdan k tadan tuzilgan o'rinalashtirish deb aytiladi va quyidagi formula bilan hisoblanadi:

$$A_n^k = n \cdot (n-1) \cdot (n-2) \cdot \dots \cdot [n-(k-1)] \text{ yoki } A_n^k = \frac{n!}{(n-k)!} \quad (20)$$

O'rin almashtirish. n ta elementdan tuzilgan o'rin almash tirish deb, shu elementlarning faqat joylashish tartibi bilan farq

qiluvchi birlashmalarga aytildi va quyidagi formula yordamida hisoblanadi:

$$P_n = n! = 1 \cdot 2 \cdot 3 \cdots n. \quad (21)$$

Gruppalash. n ta elementdan k tadan tuzilgan gruppalashlar deb, hech bo'lmaganda bitta elementi bilan farqlanuvchi qism to'plamlarga aytildi (bu yerda $k \leq n$ bo'ladi). Gruppalashlar quyidagi formula bilan hisoblanadi:

$$C_n^k = \frac{n!}{k!(n-k)!}. \quad (22)$$

Gruppalashlarda bizni faqat to'plamning elementlari qiziqtiradi, ularning tartibi esa qiziqtirmaydi.

Quyidagi tengliklar o'rini bo'ladi:

1. $C_n^k = C_n^{n-k}$,
2. $C_{n+1}^{k+1} = C_n^{k+1} + C_n^k$, ($k < n$),
3. $A_n^k = \frac{n!}{(n-k)!}$.

$$4. (a+b)^n = C_n^0 a^n + C_n^1 a^{n-1} b + \dots + C_n^k a^{n-k} b^k + \dots + C_n^n b^n \quad (23)$$

(23) formula bilan berilgan ifoda Nyuton binomi deyiladi.

n ning katta qiymatlarida, ushbu taqrifiy formula

$$n! \approx \sqrt{2\pi n} \cdot n^n \cdot e^{-n} \quad (24)$$

Stirling formulasidan foydalanilanish mumkin.

1140. Guruhdagi 22 talabandan sardor, uning muovini va devoriy gazeta muharririni saylash kerak. Shu uchta talabani necha usul bilan saylash mumkin.

Yechish. (20) formuladaga asosan:

$$A_{22}^3 = \frac{22!}{19!} = 20 \cdot 21 \cdot 22 = 9240$$

1141. 2,3,4,5,7,9 raqamlari ishtirokida nechta turli raqamli 6 xonali son hosil qilish mumkin.

Yechish. (21) formuladaga asosan:

$$P_6 = 6! = 1 \cdot 2 \cdot 3 \cdot 4 \cdot 5 \cdot 6 = 720.$$

1142. Aylananing ixtiyoriy 13 ta nuqtasidan, uchlari sh nuqtalarda bo'lgan nechta uchburchak yasash mumkin.

Yechish. (22) formuladaga asosan:

$$C_{13}^3 = \frac{13!}{10!3!} = \frac{11 \cdot 12 \cdot 13}{1 \cdot 2 \cdot 3} = 22 \cdot 13 = 286.$$

Demak, 286 ta uchburchak yasaladi.

Quyidagi masalalarni yeching

1143. Guruhdagি 20 ta talabadan iborat ro'yxatni necha usulda tuzish mumkin.

1144.10 ta shafyorni 10 mashinaga necha usulda o'tqazish mumkin?

1145. 1,3,5,7,9 raqamlardan necha usulda turli besh xonali son tuzish mumkin?

1146. Aylanada 9 ta turli nuqtalar olingan, bu nuqtalarni tutashtirib, nechta:

1)vatar, 2) uchburchak, 3) to'rburchak, 4) beshburchak yasash mumkin?

1147. 25 ta talabadan iborat guruhdan 25 kunlik navbatchilik ro'yxatini nech usulda tuzish mumkin?

1148. Kartochkaga A, B, C, D harflari yozilgan. Shu harflardan necha usulda 4 ta harfdan iborat "so'z" tuzish mumkin?

1149. 25 ta talabadan iborat guruhga 25 ta imtihon biletini tuzilgan. Har bir talabaga 1 tadan berib nech usulda tarqatish mumkin?

1150. 23 ta talabadan iborat guruhdan guruh sardori, yoshlar yetakchisi va devoriy gazeta muharririni necha usulda saylash mumkin?

1151. Futbol birinchiligidagi ishtirok etayotgan 17 komanda oltin, kumush va bronza medallarini necha usulda bo'lib oladi?

1152. Shahmat taxtasida 4 ta ruxni o'zaro olmaydigan qilib necha usulda joylashtirish mumkin?

1153. Uchta guruhda mos ravishda 20, 10, 5 ta talaba bor. Qurilish otryadiga 1-guruhdan komandir, ikkinchi guruhdan komissar va uchinchi guruhdan brigadirni necha usulda belgilash mumkin?

1154. n ta nol va k ($k \leq n+1$) ta birmi ikkita bir raqami yonmaydon turmaydigan qilib necha usulda joylashtirish mumkin?

70-§. Ehtimollikning ta'riflari

Hodisa tushunchasi ehtimollar nazariyasining asosiy tushunchasi hisoblanadi.

Hodisa deganda, muayyan sharoitda yuz berishi yoki yuz bermasligi mumkin bo'lgan har qanday voqeani tushunamiz. Hodisalarni A, B, C, \dots harflari bilan belgilanadi.

Albatta yuz beradigan hodisa **muqarrar hodisa** deyiladi.

Mutlaqo yuz bermaydigan hodisani mumkin bo'lmagan hodisa deyiladi.

A hodisaga qarama-qarshi hodisani \bar{A} ko'rinishida belgilanadi.

Agar bir necha hodisalardan hech qaysi ikkitasini bir vaqtning o'zida ro'y berishi mumkin bo'limasa, bunday hodisalarni birgalikda bo'lmagan hodisalar deyiladi.

Agar har bir sinovda A, B, C, \dots hodisalardan kamida bittasini ro'y berishi muqarrar bo'lsa, bu hodisalarning to'liq gruppasini tashkil etadi deyiladi.

1-ta'rif: A hodisaning sodir bo'l shining ehtimolligi deb, unga qulaylik tug'diruvchi hodisalar sonining, to'liq gruppera tashkil etuvchi barcha hodisalarning soniga nisbatiga aytildi. U quyidagi formula bilan hisoblanadi:

$$P(A) = \frac{m}{n}. \quad (25)$$

Bu ta'rif **ehtimollikning klassik ta'rifi** deyiladi.

Ta'rifdan bevosita har qanday A hodisa uchun

$$0 \leq P(A) \leq 1$$

tengsizlik o'rinli bo'ladi.

Klassik ta'rifdan foydalanish uchun, hodisalarni teng imkoniyatli va chekli bo'lishi zarur. Biroq amalda bu prinsiplarni har doim ham qo'llab bo'lavermaydi.

Bunday holda quyidagi **statistik ta'rifdan** foydalaniladi.

2-ta'rif. Hodisaning **nisbiy chastotasi** deb, hodisa ro'y bergan sinashlar sonining jami sinashlar soniga nisbatiga aytildi. U quyidagi formula bilan hisoblanadi:

$$W(A) = \frac{m}{n}. \quad (26)$$

Nisbiy chastota va ehtimollik o'zaro bog'liq tushunchalardir. n sonning yetarlicha katta qiymatlarida nisbiy chasteotani ehtimollik sifatida qabul qilish mumkin, ya'ni

$$\lim_{n \rightarrow \infty} W(A) = P(A).$$

3-ta'rif. Tashlangan nuqtaning $D_i \subset D$ bo'lgan har qanday D_i sohaga tushish ehtimoli deb, D_i soha o'lchamini D soha o'lchoviga nisbatiga aytildi.

Bunday aniqlangan ehtimollikni **geometrik ehtimollik** deyiladi va u quyidagi formula bilan topiladi:

$$P(A) = \frac{m \text{era}(D_i)}{m \text{era}(D)}. \quad (27)$$

$m \text{era}(D)$ - D sohaning o'lchovi ma'nosini anglatadi.

1155. Bir dona kubik tashlangan. 1) 4 raqami tushish 2) juft raqam tushishi hodisasining ehtimollarini toping.

Yechish. 1) A -hodisa 4 raqami tushish hodisasi bo'lsin. Kubik tashlanganda 6 ta teng imkoniyatlari hodisalar mavjud: 1,2,3,4,5,6. Demak, $n=6$, $m=1$, chunki 4 raqami 1 ta, bundan (25) formulaga asosan:

$$P(A) = \frac{m}{n} = \frac{1}{6}.$$

2) B - hodisa juft raqamlar tushish hodisasi bo'lsin. Bu holda $n=6$, $m=3$

Chunki: 2,4,6 raqamlari juft raqamlar, bundan (25) formulaga asosan:

$$P(A) = \frac{m}{n} = \frac{3}{6} = \frac{1}{2}.$$

1156. Ikkita tanga tashlandi. Har ikki tangani gerb tushish ehtimolini toping.

Yechish. Ikkita tanga tashlanganda quyidagi hodisalar ro'y berishi mumkin:

GG, GR, RG, RR. Demak, $n=4$, $m=1$, chunki jami hodisalar soni 4 ga, imkoniyatlar soni esa 1 ga teng, bundan (25) formulaga asosan:

$$P(A) = \frac{m}{n} = \frac{1}{4}.$$

1157. Yashikda 12 ta oq va 8 ta qora shar bor. Tavakkaliga 2 ta shar olindi. Olingan sarlarni 1) 2 ta oq, 2) 2 ta qora 3) 1 ta oq va 1 ta qora chiqish hodisasining ehtimolini toping.

Yechish. 1) 2 ta oq shar chiqishi uchun: $n_1 = C_{20}^2$, $m_1 = C_{12}^2$, demak, (25) formulaga asosan

$$P(A_1) = \frac{m_1}{n_1} = \frac{C_{12}^2}{C_{20}^2} = \frac{\frac{12!}{2!(12-2)!}}{\frac{20!}{2!(20-2)!}} = \frac{\frac{1\cdot 2}{19\cdot 20}}{\frac{1}{1\cdot 2}} = \frac{66}{90} = \frac{33}{45},$$

2) 2 ta qora shar chiqishi uchun: $n_2 = C_{20}^2$, $m_2 = C_8^2$, demak, (25) formulaga asosan

$$P(A_2) = \frac{m_2}{n_2} = \frac{C_8^2}{C_{20}^2} = \frac{\frac{8!}{2!(8-2)!}}{\frac{20!}{2!(20-2)!}} = \frac{\frac{7\cdot 8}{19\cdot 20}}{\frac{1}{1\cdot 2}} = \frac{14}{45},$$

3) 1 ta oq va 1 ta qora shar chiqishi uchun: $n_3 = C_{20}^2$, $m_3 = C_8^1 \cdot C_{12}^1$, demak, (25) formulaga asosan

$$P(A_3) = \frac{m_3}{n_3} = \frac{C_8^1 \cdot C_{12}^1}{C_{20}^2} = \frac{\frac{8!}{1!(8-1)!} \cdot \frac{12!}{1!(12-1)!}}{\frac{20!}{2!(20-2)!}} = \frac{\frac{8\cdot 12}{19\cdot 20}}{\frac{1}{1\cdot 2}} = \frac{96}{190} = \frac{48}{95}.$$

Ta'kidlash lozimki, 2 ta shar olinganga yuqoridagi 3 ta hodisa to'liq gruppa tashkil etadi. Shuning uchun:

$$P(A_1) + P(A_2) + P(A_3) = \frac{33}{95} + \frac{14}{95} + \frac{48}{95} = 1.$$

1158. Yilning 135 kunida yog'ingarchilik bo'lgan bo'lsa, yog'ingarchilikning nisbiy chastotasini toping.

Yechish. (26) formulaga asosan:

$$W(A) = \frac{135}{365} = \frac{27}{73}.$$

1159. R radiusli doiraga kvadrat ichki chizilgan. Tashlangan zarrani kvadratga tushish ehtimolini toping.

Yechish. $S_d = \pi R^2$, $S_{kv} = a^2 = 2R^2$. (27) formulaga asosan:

$$P(A) = \frac{\text{merra}(D_1)}{\text{merra}(D)} = \frac{S_{kv}}{S_d} = \frac{2R^2}{\pi R^2} = \frac{2}{\pi}.$$

Quyidagi masalalarni yeching

1160. Yashikda 1 dan 20 gacha nomerlangan 20 ta shar bor. 1 ta shar olindi. 1) olingen sharning raqami 23. 2) juft raqam chiqishi. 3) 4 ga karrali raqam chiqishi ehtimolini toping.

1161. Tanga 2 marta tashlandi. 2 ta tangada ham gerb tushish ehtimolini toping.

1162. 1000 ta lotareya biletchi chiqarilgan bo‘lib, undan 500 tasi yutuqli. 2 ta bilet olindi. 1) 1 tasi yutuqli. 2) 2 ta yutuqli bo‘lish ehtimolini toping.

1163. Guruhda 30 o‘quvchi bo‘lib, yozma ishdan 9 tasi 5 baho, 12 tasi 4 baho,

6 tasi 3 baho, 3 tasi esa 2 baho oldi. Doskaga chiqarilgan 2 o‘quvchining 1 tasi 5 baho, 1 tasi 2 baho olgan o‘quvchi bo‘lish ehtimolini toping.

1164. “TARVUZ” so‘zidan tavakkaliga 1 ta harf tanlangan. Bu harfnинг: 1) “M” harfi bo‘lish ehtimolini toping. 2) unli harf bo‘lish ehtimolini toping.

1165. Qutida 3 ta qizil, 7 ta ko‘k, 5 ta oq shar bor. Qutidan tavakkaliga olingen sharning : 1) oq rangli bolishi, 2) qizil rangli bo‘lishi, 3) yashil rangli bo‘lishi, 4) rangli bo‘lish ehtimolini toping.

1166. 2020-yilning fevral oyining 14 kunida yog‘ingarchilik bo‘ldi. Yog‘ingarchilikli kunlar hodisasini nisbiy chastotasini toping.

1167. 2019-yilning fevral oyining 13 kunida yog‘ingarchilik bo‘ldi. Yog‘ingarchilikli kunlar hodisasini nisbiy chastotasini toping.

1168. Mashinaga yuklashda 400 ta tarvuzdan 25 tasi yorildi. Tarvuzlar yorilishi hodisasining nisbiy chastotasini toping.

1169. Magazinga keltirilgan 6000 ta chinni idishdan 16 tasi singan chiqdi. Siniq idish chiqish hodisasining nisbiy chastotasini toping.

1170. R radiusli doiraga: 1) muntazam uchburchak, 2) kvadrat, 3) muntazam oltiburchak ichki chizilgan. Tashlangan zarrani: uchburchakka, kvadratga, oltiburchakka tushish ehtimolini toping.

1171. R radiusli sharga, kub ichki chizilgan. Tashlangan zarrani kubga tushish ehtimolini toping.

71-§. Ehtimollarni qo'shish, ko'paytirish teoremlari. Shartli ehtimollik

A hodisaning ro'y berishi yoki ro'y bermasligi, B hodisaning ro'y berish yoki ro'y bermasligiga bog'liq bo'lmasa bu ikki hodisa o'zaro bog'liq bo'lмаган-еркли hodisalar deyiladi.

O'zaro erkli hodisalar, yig'indisining ehtimoli uchun quyidagi formula o'rinli:

$$P(A+B) = P(A) + P(B). \quad (28)$$

Juft-jufti bilan erkli hodisalarning yig'indisini ehtimoli uchun quyidagi formula o'rinli:

$$P\left(\sum_{i=1}^n A_i\right) = \sum_{i=1}^n P(A_i). \quad (29)$$

O'zaro bog'liq hodisalar, yig'indisining ehtimoli uchun quyidagi formula o'rinli:

$$P(A+B) = P(A) + P(B) - P(A \cdot B). \quad (30)$$

O'zaro erkli hodisalar, ko'paytmasining ehtimoli uchun quyidagi formula o'rinli:

$$P(A \cdot B) = P(A) \cdot P(B). \quad (31)$$

Juft-jufti bilan erkli hodisalarning ko'paytmasini ehtimoli uchun quyidagi formula o'rinli:

$$P\left(\sum_{i=1}^n A_i\right) = \sum_{i=1}^n P(A_i). \quad (32)$$

Juft-jufti bilan erkli hodisalarning hech bo'lmasa, bittasini ro'y berish ehtimoli uchun quyidagi formula o'rinli:

$$P(A) = 1 - P(\overline{A_1} \cdot \overline{A_2} \cdot \dots \cdot \overline{A_n}) \quad (33)$$

O'zaro bog'liq hodisalar, ko'paytmasining ehtimoli uchun quyidagi formula o'rinli, bunday ehtimollikni shartli ehtimollik deb ataladi:

$$P(A \cdot B) = P(A) \cdot P_A(B) = P(B) \cdot P_B(A). \quad (34)$$

Juft-jufti bilan bog'liq hodisalarning ko'paytmasini ehtimoli uchun quyidagi formula o'rinli:

$$P(A_1 \cdot A_2 \cdot \dots \cdot A_n) = P\left(\prod_{i=1}^n A_i\right) = P(A_1) \cdot P_{A_1}(A_2) \cdot P_{A_1 A_2}(A_3) \cdot \dots \cdot P_{A_1 A_2 \dots A_{n-1}}(A_n). \quad (35)$$

1172. Yashikda 10 ta oq, 15 ta qora 20 ta yashil sharlar bor. 1 dona shar olindi. Shu sharni 1) oq bo'lishi, 2) qora bo'ishi, 3) yashil bo'ishi, 4) oq yoki qora bo'ishi, 5) qora yoki yashil bo'lishi, 6) oq, qora yoki yashil bo'lishi ehtimollarini toping.

Yechish. 1) $P(O) = \frac{10}{45} = \frac{2}{9}$, 2) $P(Q) = \frac{15}{45} = \frac{1}{3}$, 3) $P(Y) = \frac{20}{45} = \frac{4}{9}$.

(28) formulaga asosan:

$$4) P(O+Q) = \frac{10+15}{45} = \frac{25}{45} = \frac{5}{9}, \quad 5) P(Q+Y) = \frac{15+20}{45} = \frac{35}{45} = \frac{7}{9},$$

$$6) P(Q+Y) = 1 - P(O) = 1 - \frac{10}{45} = \frac{7}{9}, \quad 7) P(O+Q+Y) = \frac{10+15+20}{45} = \frac{45}{45} = 1.$$

1173. Birinchi yashikda 2 ta oq, 10 ta qora, ikkinchi yashikda 8 ta oq 4 ta qora sharlar bor. Har bir yashikdan 1 tadan shar olindi.

Olingen sharlarni ikkalasi ham oq bo'lishi ehtimollarini toping.

Yechish. A -birinchi yashikdan oq shar chiqish hodisasi bo'lsin, B -ikkinchi yashikdan oq shar chiqish hodisasi bo'lsin, A va B hodisalar o'zaro erkli hodisalar,

$$P(A) = \frac{2}{12} = \frac{1}{6}, \quad P(B) = \frac{8}{12} = \frac{2}{3}.$$

(31) formulaga asosan:

$$P(A \cdot B) = P(A) \cdot P(B) = \frac{1}{6} \cdot \frac{2}{3} = \frac{1}{9}.$$

1174. Avvalgi masalani shartlaridan, olingen sharlarni bittasi oq, ikkinchisi qora bo'lishi ehtimollarini toping.

Yechish. C -birinchi yashikdan oq shar chiqish hodisasi bo'lsin, D -ikkinchi yashikdan oq shar chiqish hodisasi bo'lsin, \bar{C} -birinchi yashikdan qora shar chiqish hodisasi bo'lsin, \bar{D} -ikkinchi yashikdan qora shar chiqish hodisasi bo'lsin.

U holda

$$P(C) = \frac{1}{6}, \quad P(D) = \frac{2}{3}, \quad P(\bar{C}) = 1 - \frac{1}{6} = \frac{5}{6}, \quad P(\bar{D}) = 1 - \frac{2}{3} = \frac{1}{3}.$$

Faraz qilaylik, birinchi yashikdan oq va ikkinchi yashikdan qora shar chiqsin:

$$P(C\bar{D}) = P(C) \cdot P(\bar{D}) = \frac{1}{6} \cdot \frac{1}{3} = \frac{1}{18}.$$

Faraz qilaylik, birinchi yashikdan qora va ikkinchi yashikdan oq shar chiqsin:

$$P(\bar{C}D) = P(\bar{C}) \cdot P(D) = \frac{2}{3} \cdot \frac{5}{6} = \frac{5}{9}.$$

Olingan sharlarni biri oq va biri qora bo'lishi esa bu ikki ehtimollikning yig'nidisiga teng bo'ladi:

$$P = P(\bar{C}\bar{D}) + P(\bar{C}D) = \frac{1}{18} + \frac{5}{9} = \frac{11}{18}.$$

1175. 1173-masala shartida olingan sharlarni har ikkisi ham qora bo'lish ehtimolini toping.

Yechish. Bu masala 1173-1174-masalalar shartlarining to'ldiruvchisidan iborat bo'lgani uchun, uning ehtimoli:

$$P = 1 - \left(\frac{1}{9} + \frac{11}{18} \right) = 1 - \frac{13}{18} = \frac{5}{18}.$$

1176. Yashikda 6 ta oq, 8 ta qora sharlar bor. Ikkita shar olindi. Har ikki sharlarni oq bo'lish ehtimollarini toping.

Yechish. A -birinchi olingan sharni oq chiqish hodisasi bo'lsin, B -ikkinchi olingan sharni oq chiqish hodisasi bo'lsin. A va B hodisalar o'zaro bog'liq hodisalar bo'lgani uchun:

$$P(A) = \frac{6}{6+8} = \frac{6}{14} = \frac{3}{7}, \quad P_A(B) = \frac{6-1}{14-1} = \frac{5}{13}, \quad P(A \cdot B) = P(A) \cdot P_A(B) = \frac{3}{7} \cdot \frac{5}{13} = \frac{15}{91}.$$

1177. Uch mergan o'zaro erkli holda nishonlarga o'q uzmoqda. 1-merganning nishonga tekkizish ehtimoli 0,75 ga teng, 2-merganning nishonga tekkizish ehtimoli 0,8 ga teng, 3-merganning nishonga tekkizish ehtimoli 0,9 ga teng. Har uch merganning nishonga urish ehtimolini toping.

Yechish. A -birinchi merganni, B -ikkinchi merganni, C -uchinchini merganni nishonga urish hodisasi bo'lsin. U holda, (31) formuladan

$$P(A) = 0,75, \quad P(B) = 0,8, \quad P(C) = 0,9.$$

$$P(A \cdot B \cdot C) = P(A) \cdot P(B) \cdot P(C) = 0,75 \cdot 0,8 \cdot 0,9 = 0,54.$$

1178. 1177-masalani shartlaridan, aqalli bitta merganni nishonga urish ehtimolini toping.

Yechish.

$$P(\bar{A}) = 1 - 0,75 = 0,25, \quad P(\bar{B}) = 1 - 0,8 = 0,2, \quad P(\bar{C}) = 1 - 0,9 = 0,1.$$

Har uch merganning nishonga bir vaqtda tekkiza olmaslik ehtimoli:

$$P(\bar{A} \cdot \bar{B} \cdot \bar{C}) = P(\bar{A}) \cdot P(\bar{B}) \cdot P(\bar{C}) = 0,25 \cdot 0,2 \cdot 0,1 = 0,005.$$

U holda, hech bo'limasa bittasini nishonga urish (33) formuladan:

$$P = 1 - P(\bar{A} \cdot \bar{B} \cdot \bar{C}) = 1 - 0,005 = 0,995$$

ga teng.

Quyidagi masalalarni yeching

1179. Yashikda 10 ta oq, 8 ta qora, 6 ta yashil shar bor. 1 ta shar olindi. Olingan sharni: 1) oq, 2) qora, 3) yashil, 4) oq yoki qora, 5) oq yoki yashil, 6) qora yoki yashil chiqishi ehtimolini toping.

1180. Birinchi yashikda 12 ta oq, 8 ta qora; ikkinchi yashikda 6 ta oq va 4 ta qora shar bor. Har ikki yashikdan 1 tadan sharlarni olindi. Olingan sharni har ikkitasi qora bo'lish ehtimolini toping.

1181. Ikki mergan o'zaro erkli holda nishonga o'q uzmoqda. 1-merganning nishonga urish ehtimoli 0,7 ga teng, 2- merganning nishonga urish ehtimoli 0,8 ga teng. Merganlar bir paytda nishonga o'q uzishdi. Merganlardan birini nishonga urish ehtimolini toping.

1182. Birinchi yashikda 1 ta oq, 2 ta qizil va 3 ta ko'k; ikkinchi yashikda 2 ta oq va 6 ta qizil va 4 ta ko'k shar bor. Har ikki yashikdan 1 tadan shar olindi. Olingan sharni ichida: 1) ko'k shar, 2) qizil shar, 3) oq shar bo'imasilik ehtimolini toping.

1183. Kun davomida stanokning buzilish ehtimoli 0,03 ga teng. 4 kun davomida stanokni buzilmay ishlash ehtimolini toping.

1184. Guruhda 12 ta yigitlar va 18 ta qizlar o'qishadi. Ikki kishidan iborat vakil saylash kerak. Saylanganlarni: 1) 2 ta yigitlar, 2) 2 ta qizlar, 3) 1 ta yigit va 1 ta qiz bo'lish ehtimolini toping.

1185. Yashikda 9 ta oq, 1 ta qora shar bor. 3 ta shar olindi. 1) 3 ta oq 2) 2 ta oq 1 ta qora shar chiqish ehtimolini toping.

1186*. Bitta nishonga 3 ta o'q uzildi. O'qni nishonga tegish ehtimoli 0,5 bo'lsa, faqat 1 ta o'qni nishonga tegish ehtimoli topilsin.

72-§. To‘la ehtimollik formulasi. Beyes formulasi

Agar A hodisa, to‘liq grupper tashkil etuvchi o‘zaro juft-jufti bilan erkli B_1, B_2, \dots, B_n hodisalarning bittasi bilan birgalikda ro‘y berishi mumkin bo‘lsa, quyidagi **to‘la ehtimollik** formulasi o‘rinli bo‘ladi:

$$P(A) = P(B_1) \cdot P_{B_1}(A) + \dots + P(B_n) \cdot P_{B_n}(A) = \sum_{i=1}^n P(B_i) P_{B_i}(A). \quad (36)$$

A hodisa ro‘y berdi degan shart ostida B_i hodisaning ro‘y berish shartli ehtimoli, quyidagi Beyes formulasi bilan topiladi:

$$P_A(B_i) = \frac{P(A \cdot B_i)}{P(A)} = \frac{P(B_i) P_{B_i}(A)}{\sum_{i=1}^n P(B_i) P_{B_i}(A)}. \quad (37)$$

1187. Birinchi qutida 2 ta oq va 6 ta qora, ikkinchi qutida 4 ta oq va 2 ta qora shar bor. Birinchi qutidan tavakkaliga 2 ta shar olinib, ikkinchi qutiga solindi. Ikkinci qutidan olingan sharni oq bo‘lish ehtimolini toping.

Yechish. A - ikkinchi qutidan olingan sharni oq bo‘lishi hodisasi bo‘lsin. B_1 -birinchi qutidan olinib, ikkinchi qutiga solingen sharlarning ikkalasi ham oq, B_2 -birinchi qutidan olinib, ikkinchi qutiga solingen sharlarning 1 tasi oq va 1 tasi qora, B_3 -birinchi qutidan olinib, ikkinchi qutiga solingen sharlarning ikkalasi ham qora. U holda

$$P(B_1) = \frac{C_2^2}{C_8^2} = \frac{1}{28}, \quad P(B_2) = \frac{C_2^1 \cdot C_6^1}{C_8^2} = \frac{12}{28}, \quad P(B_3) = \frac{C_6^2}{C_8^2} = \frac{15}{28},$$

$$P_{B_1}(A) = \frac{6}{8}, \quad P_{B_2}(A) = \frac{5}{8}, \quad P_{B_3}(A) = \frac{4}{8}.$$

Demak, (36) formulaga asosan:

$$P(A) = \frac{1}{28} \cdot \frac{6}{8} + \frac{12}{28} \cdot \frac{5}{8} + \frac{15}{28} \cdot \frac{4}{8} = \frac{9}{16}.$$

1188. Magazinga ikkita korxonadan lampalar keltirildi. Lampalarning 30% birinchi firmada ishlab chiqarilgan bo‘lib, ularni yaroqliligi 0,8 ga teng, ikkinchi firmada ishlab chiqarilgan 70% mahsulotni esa yaroqliligi 0,6 ga teng. Tanlangan lampani tekshirilganda u yaroqli chiqdi. Uni birinchi korxonada ishlab chiqarilganligi ehtimolini toping.

Yechish. A - sinab ko'rilgan lampani yaroqli chiqish hodisasi. B_1 - lampa birinchi korxonaga tegishli bo'lishi hodisasi, B_2 - lampa ikkinchi korhonaga tegishli bo'lishi hodisasi. Masala shartiga ko'ra, $P(B_1) = 0,3$; $P(B_2) = 0,7$; $P_{B_1}(A) = 0,8$; $P_{B_2}(A) = 0,6$.

Sinab ko'rilgan lampa yaroqli chiqqan, ya'ni A hodisa ro'y beragan. U holda Beyes formulasi (37) ga asosan, birinchi korxonada ishlab chiqarilgan bo'lish ehtimoli

$$P_A(B_1) = \frac{0,3 \cdot 0,8}{0,3 \cdot 0,8 + 0,7 \cdot 0,6} \approx 0,364.$$

Quyidagi masalalarni yeching

1189. Birinchi qutida 1 ta oq va 2 ta qora, ikkinchi qutida 100 ta oq va 100 ta qora shar bor. Ikkinci qutidan tavakkaliga 1 ta shar olinib, birinchi qutiga solindi. Shundan so'ng birinchi qutidan 1 ta shar olindi, u oq shar bo'lsa, uni ikkinchi qutidan olingan shar bo'lish ehtimolini toping.

1190. Qutida 5 ta standart va 2 ta nostandard detal bor. Qutidan ketma-ket ikki marta detal olindi. Ikkinci olingan detalni standart bo'lish: 1) agar 1-detali qutiga qaytarilgan bo'lsa, 2) agar 1-detali qutiga qaytarilmagan bo'lsa, ehtimolini toping.

1191. Oquv zalida ehtimollar nazariyasidan 8 ta darslik bo'lib, ularning 3 tasi lotin alifbosida yozilgan. Talaba tavakkaliga ketma-ket ikkita darslik oldi. Olingan ikki darslikni lotin alifbosida yozilgan bo'lish ehtimolini toping.

1192. Ikki zambarakdan bir vaqtida o'q uzilganda nishonga o'qni tegish ehtimoli 0,95 ga teng. Agar ikkinchi zambarakdan bitta o'q uzilganda o'qni nishonga tegish ehtimoli 0,8 ga teng bo'lsa, bu ehtimollikni birinchi zambarak uchun toping.

1193. Ikkito'quv dastgohining bir soat davomida to'xtovsiz ishlashi ehtimoli mos ravishda 0,6 va 0,85 ga teng. Bir soat davomida faqat bitta to'quv dastgohining to'xtovsiz ishlashini ehtimolini toping.

1194. 6 ta oq va 2 ta rangli shar solingen yashikdan tavakkaliga 4 ta shar olindi. Olingan sharlarni ichida hech bo'lmaganda 1 ta rangli shar bo'lish ehtimolini toping.

1195. 100 ta lotereya biletidan 8 tasi yutuqli. Hech bo'lmaganda bitta biletda yutuq bo'lish ehtimolini toping: 1) agar 2 ta bilet olingan bo'lsa; 2) agar 4 ta bilet olingan bo'lsa.

1196. Ikkita qutidan birinchisida 4 ta oq va 8 ta qora shar bor va ikkinchisida 6 ta oq va 3 ta qora shar bor. Har bir qutidan tavakkaliga bittadan shar olindi. Olingan sharlardan hech bo'lma-ganda bittasi oq bo'lish ehtimolini toping.

1197. Talaba o'quv dasturidagi 25 ta savoldan 20 tasini biladi. Talaba o'qituvchi tomonidan berilgan 3 ta savolni bilish ehtimolini toping.

1198. Qutida 8 ta oq, 6 ta qizil va 4 ta yashil shar bor. Qutidan tavakkaliga ketma-ket 3 ta shar olindi va qutiga qaytarilmadi. Olingan sharlarni birinchisi oq, ikkinchisi qizil va uchinchisini yashil bo'lish ehtimolini toping.

1199. Talabaning 3 ta test savolidan o'tish ehtimoli mos ravishda 0,9, 0,8 va 0,9 ga teng. Talabaning: 1) faqat uchinchi sinovdan o'tish; 2) faqat bitta sinovdan o'tishi; 3) har uchala sinovdan o'tishi; 4) hech bo'lma-ganda ikkita sinovdan o'tishi; 5) hech bo'lma-ganda bitta sinovdan o'tishi ehtimolini toping.

1200. Uchta mergan nishonga qarata bittadan o'q uzishdi. Merganlarni o'qini nishonga tegish ehtimoli mos ravishda 0,7, 0,8 va 0,6 ga teng bo'lsa, quyidagi hodisalarning ehtimolini toping: 1) faqat uchinchi merganni nishonga tekkizishi; 2) faqat bitta merganni nishonga tekkizishi; 3) har uchala merganni nishonga tekkizishi; 4) hech bo'lma-ganda ikkita merganni nishonga tekkizishi; 5) hech bo'lma-ganda bitta merganni nishonga tekkizishi.

1201. Uchta erkli sinashda hodisaning hech bo'lma-ganda bir marta ro'y berish ehtimoli 0,9919 ga teng. Hodisaning ehtimoli barcha sinashlarda o'zgarmas bo'lsa, hodisani bitta sinashda ro'y berish ehtimolini toping.

1202. Basketbolchingin bir tashlashda koptokni savatga tushirish ehtimoli 0,6 ga teng. 0,784 dan kam bo'lma-ganda ehtimol bilan hech bo'lma-ganda bir marta savatga tushirish uchun basketbolchi koptokni savatga kamida necha marta tashlashi kerak?

1203. Qimmatli qog'ozlar bozorida har bir aksiya paketi aksiyadorlarga 0,5 ehtimollik bilan foyda keltiradi. Hech bo'lma-ganda bitta aksiya paketida 0,96875 ehtimol bilan foyda ko'rishi uchun kamida nechta har xil firmalarning aksiyasi sotib olinishi kerak?

1204. Qutida 2 ta oq, 6 ta qora shar bor. Ikkita talaba qutidan navbat bilan 1 tadan shar oldi va qutiga qaytaradi. Birinchi bo'lib oq shar olgan talaba yutuqqa ega bo'ladi. Birinchi talabaning yutuqqa ega bo'lish ehtimolini toping.

1205. Birinchi qutida 5 ta oq va 3 ta qora, ikkinchi qutida 3 ta oq va 9 ta qora shar bor. Birinchi qutidan tavakkaliga bittadan shar olindi va ikkinchi qutiga solindi. Keyin ikkinchi qutidan bitta shar olindi. Bu sharni qora bo'lish ehtimolini toping.

1206. Yig'uv sexiga birinchi sexdan 40%, ikkinchi sexdan 60% detal keltirilgan. Birinchi sexda 90%, ikkinchi sexda 95% standart detallar tayyorlanadi. Tavakkaliga olingan detalni standart bo'lish ehtimolini toping.

1207. Do'konga uchta firmadan mos ravishda: 20%, 46% va 34% miqdordagi mahsulot keltirilgan. Firmalarning mahsulotlarini yaroqsiz bo'lish ehtimoli mos ravishda: 0,03, 0,02 va 0,01 ga teng. Do'kondan tavakkaliga olingan mahsulot yaroqsiz chiqdi. Uni birinchi firma mahsuloti bo'lish ehtimolini toping.

1208*. Musobaqada 3 ta sport ustasi, 4 ta sport ustaligiga nomzod va 5 ta birinchi razryadli sportchi qatnashmoqda. Ularni o'qni nishonga tekkizish ehtimoli : mos ravishda: 0,9 ga, 0,85 ga, 0,75 ga teng. Otilgan o'q nishonga tegdi. Nishonga tekkizgan qatnashchini sport ustasi bo'lishi ehtimolini toping.

1209*. Do'konga uchta korxonadan 5:8:7 nisbatda mahsulot keltirildi. Korxonalarning mahsulotlarini yaroqli bo'lish ehtimoli mos ravishda: 0,9, 0,85 va 0,75 ga teng. Quyidagi ehtimollikni toping: 1) sotilgan mahsulotni yaroqsiz bo'lishi; 2) sotilgan mahsulotni yaroqli bo'lishi; 3) sotilgan mahsulot yaroqli chiqdi va uni uchinchi korxonada ishlab chiqarilganligi.

73-§. Erkli sinovlar ketma-ketligi. Bernulli formulasi. Muavr-Laplasning lokal va integral formulalari

n ta erkli sinovlarning har birida A hodisaning ro'y berish ehtimoli bir xil bo'lib p ga teng va ro'y bermasligi esa $q=1-p$ ga teng bo'lsa, uni n ta sinovda m marta ro'y berish ehtimoli

$$P_n(m) = C_m^n p^m q^{n-m} \quad (38)$$

formula bilan topiladi. (38) Bernulli formulasi deyiladi.

A- hodisaning kamida bir marta ro'y berish ehtimoli quyidagi formula bilan topiladi:

$$P\left(x \geq \frac{1}{n}\right) = 1 - P\left(x = \frac{0}{n}\right) = 1 - q^n. \quad (39)$$

A- hodisaning kamida k marta ro'y berish ehtimoli quyidagi formula bilan topiladi:

$$P\left(x \geq \frac{k}{n}\right) = \sum_{m=k}^n C_n^m p^m q^{n-m}, \text{ yoki } P\left(x \geq \frac{k}{n}\right) = 1 - \sum_{m=0}^{k-1} C_n^m p^m q^{n-m}. \quad (40)$$

A- hodisaning ko'pi bilan k marta ro'y berish ehtimoli quyidagi formula bilan topiladi:

$$P\left(x \leq \frac{k}{n}\right) = \sum_{m=0}^k C_n^m p^m q^{n-m}. \quad (41)$$

A- hodisaning ehtimolligi p kichik va n katta qiymatni qabul qilganda, (38) formulaning o'rniga Muavr-Laplasning lokal formulasidan foydalilanadi:

$$P_n(m) \approx \frac{1}{\sqrt{npq}} \cdot \varphi(x), \text{ бу ерда } x = \frac{m - np}{\sqrt{npq}}. \quad (42)$$

Bu yerda $\varphi(x) = \frac{1}{\sqrt{2\pi}} e^{-\frac{x^2}{2}}$ ko'rinishda bo'lib, funksiyaning qiymatlari 1-jadval yordamida topiladi. Bunda $\varphi(-x) = \varphi(x)$.

A- hodisaning kamida m_1 marta va ko'pi bilan m_2 marta ro'y berish ehtimoli quyidagi Muavr-Laplasning integral formulasidan foydalilanadi:

$$P_n(m_1, m_2) \approx \Phi(x'') - \Phi(x'), \quad (43)$$

bu yerda

$$x' = \frac{m_1 - np}{\sqrt{npq}} \text{ va } x'' = \frac{m_2 - np}{\sqrt{npq}}.$$

$$\Phi(x) = \frac{1}{\sqrt{2\pi}} \int_0^x e^{-\frac{z^2}{2}} dz$$

Laplas integrali deb ataluvchi tenglik bilan aniqlanadi va uni qiymatlari jadval yordamida topiladi. Bunda $\Phi(-x) = -\Phi(x)$.

n ta erkli sinovlar seriyasida *A* hodisaning ro'y berishini eng ehtimolli soni m_0 quyidagi formula bilan topiladi:

$$np - q \leq m_0 \leq np + p. \quad (44)$$

A hodisa ehtimoli p bilan $\frac{m}{n}$ nisbiy chastota orasidagi farqni ε dan kichik bo'limaslik ehtimolini, quyidagi formula yordamida topiladi:

$$P\left(\left|\frac{m}{n} - p\right| \leq \varepsilon\right) \approx 2\Phi\left(\varepsilon \sqrt{\frac{n}{pq}}\right). \quad (45)$$

A-hodisaning ehtimolligi $p \rightarrow 0$ kichik va $n \rightarrow \infty$ katta qiymatni qabul qilganda, (38) formulaning o'rniga quyidagi Puasson formulasidan foydalilaniladi:

$$P_n(m) \approx \frac{\lambda^m}{m!} \cdot e^{-\lambda}. \quad (46)$$

1210. Olingan mahsulotni standart bo'lish ehtimoli 0,8 bo'lsin. Quyidagi:

- 1) olingan 5 ta mahsulotdan 3 tasini standart bo'lishi;
- 2) kamida 1 tasini standart bo'lishi;
- 3) kamida 3 tasini standart bo'lishi;
- 4) hech bo'limasa 2 tasini standart bo'lishi, ehtimolliklarini toping.

Yechish. Masala shartiga asosan, $p = 0,8$, $q = 0,2$

- 1) (38) formuladan:

$$P_5(3) = C_5^3 \cdot 0,8^3 \cdot 0,2^2 = \frac{5!}{3!(5-3)!} \cdot 0,512 \cdot 0,04 = \frac{10}{3} \cdot 0,02048 \approx 0,068.$$

- 2) (39) formuladan:

$$P\left(x \geq \frac{1}{5}\right) = 1 - P\left(x = \frac{0}{5}\right) = 1 - 0,2^5 = 1 - 0,00032 = 0,999.$$

- 3) (40) formuladan:

$$P\left(x \geq \frac{3}{5}\right) = C_5^3 \cdot 0,8^3 \cdot 0,2^2 + C_5^4 \cdot 0,8^4 \cdot 0,2^1 + C_5^5 \cdot 0,8^5 \cdot 0,2^0 \approx 0,804.$$

- 4) (41) formuladan:

$$P\left(x \leq \frac{2}{5}\right) = C_5^0 \cdot 0,2^5 + C_5^1 \cdot 0,8^1 \cdot 0,2^4 + C_5^2 \cdot 0,8^2 \cdot 0,2^3 \approx 0,576.$$

1211. Merganning bir marta o'q uzishda nishonga tegish ehtimoli $p=0,2$ ga teng. 100 ta o'qdan 20 tasini nishonga tegish ehtimolini toping.

Yechish. Aytilgan ehtimollikni (42) formula yordamida topamiz. Bunda $p=0,2$; $q=0,8$; $m=20$ bo'lganidan $\sqrt{npq}=\sqrt{100 \cdot 0,2 \cdot 0,8}=4$ va $x = \frac{m-np}{\sqrt{npq}} = \frac{20-100 \cdot 0,2}{4} = 0$. $\varphi(x)$ funksiyaning qiymatini jadval-

dan topamiz: $\varphi(0) \approx 0,40$. Shuning uchun $P_{100}(20) \approx 0,40 \cdot 0,25 \approx 0,1$.

1212. Tasodifan tanlangan mahsulotni yaroqsiz chiqish ehtimoli $p=0,2$ ga teng. Tekshirish uchun olingan 400 ta mahsulot ichida 70 tadan 100 tagacha yaroqsiz bo'lismi ehtimolini toping.

Yechish. Masalaning yechimini (43) formuladan foydalanib topamiz. Masala shartidan: $p=0,2$, $q=0,8$, $n=400$, $m_1=70$, $m_2=100$, bo'lgani uchun $\sqrt{npq}=\sqrt{400 \cdot 0,2 \cdot 0,8}=8$ va $x' = \frac{70-400 \cdot 0,2}{8} = -1,25$,

$$x_2 = \frac{100-400 \cdot 0,2}{4} = 2,5$$

$$\begin{aligned} P_{400}(70,100) &= \Phi(2,5) - \Phi(-1,25) = \Phi(2,5) + \Phi(1,25) = \\ &= 0,4938 + 0,3944 = 0,8882. \end{aligned}$$

1213. Zavodda ishlab chiqarilgan mahsulotlar ichida oliv navlisi 31% ni tashkil etadi. Konveerdan hozirgina chhqan mahsulotlardan 75 tasi ixtiyoriy ravishda tanlab olindi. Shu mahsulot ichida ko'pi bilan nechta oliv navli mahsulot bo'lishi mumkinligini aniqlang.

Yechish. Masala shartiga asosan, $n=75$, $p=0,31$, $q=1-0,31=0,69$.

(44) formulaga asosan:

$$75 \cdot 0,31 - 0,69 \leq m_0 \leq 75 \cdot 0,31 + 0,31 \Rightarrow 22,56 \leq m_0 \leq 23,56.$$

Bu tengsizlikdan $m_0 = 23$ deb olish mumkin.

1214. Hodisaning 600 ta erkli sinovlarning har birida ro'y berish ehtimoli 0,7 ga teng. Hodisa ro'y berishi nisbiy chastotasining oldindan ma'lum bo'lgan ehtimolidan chetlanishi absolyut kattalik bo'yicha 0,03 dan ortiq bo'lmasligi ehtimolini toping.

Yechish.

Masalaning shartiga ko'ra, $n=600$, $p=0,7$, $q=1-0,7=0,3$, $\varepsilon=0,03$ bo'lgani uchun (45) formulaga asosan:

$$P\left(\left|\frac{m}{600} - 0,7\right| \leq 0,03\right) \approx 2\Phi\left(0,03 \cdot \sqrt{\frac{600}{0,7 \cdot 0,3}}\right) = 2\Phi(1,60) = 2 \cdot 0,445 = 0,89.$$

Demak, ehtimollik 0,89 ga teng ekan.

1215. Do'konga fabrikadan 500 dona sifatli tort jo'natildi. Tortning yo'lda buzilish ehtimoli bir donasi uchun 0,002 ga teng. Do'konga 3 ta sifatsiz tort yetib kelish ehtimolini toping.

Yechish. Masalaning shartidan

$$n = 500, p = 0,002, m = 3 \Rightarrow \lambda = 500 \cdot 0,002 = 1.$$

Puasson formulasi (46) ga asosan:

$$P_{500}(3) = \frac{1}{3!} \cdot e^{-1} \approx 0,06.$$

Quyidagi masalalarni yeching

1216. Tanga 8 marta tashlandi. 6 marta gerb tomon tushish ehtimolini toping.

1217. Tanga 6 marta tashlandi. 3 martagacha gerb tushish ehtimolini toping.

1218. Guruh 20 ta o'g'il va 10 qizdan iborat. O'qituvchi tomonidan berilgan 3 ta savolga javob bergenlarni 2 tasi o'gil, 1 tasi qiz bo'lish ehtimolini toping.

1219. 4 ta yashikning har birida 5 ta oq va 15 ta qora shar bor. Ketma-ket 14 ta shar olinib ularni ro'yxatdan o'tkazib, yashikka qayta tashlanadi. Har bir yashikdan 1 donadan shar olindi. Olingan sharlarning 2 tasi oq va 2 tasi qora bo'lish ehtimolini toping.

1220. 20 ta yashikda bir xil detallar bor. Tavakkaliga tanlangan 1 ta yashikdan standart detal chiqish ehtimoli 0,75 ga teng. Barcha detallari standart bo'ladigan yashiklar eng ehtimolli sonini toping.

1221. Birinchi ishchi smena davomida 120 ta, bundan 0,94 ehtimolik bilan oliy sifatli detal tayyorlaydi. Ikkinci ishchi esa smena davomida 140 ta, bundan 0,8 ehtimolik bilan oliy sifatli detal tayyorlaydi. Har bir ishchi uchun oliy navli detal tayyorlashning eng ehtimolli sonini toping.

1222. Oq va qora sharlari bo'lgan 100 ta yashik bor. Har bir yashikdan oq shar chiqish ehtimoli 0,6 ga teng. Barcha olingan sharlari oq bo'lgan yashiklarning eng ehtimolli sonini toping.

1223. Agar 49 ta erkli sinashda hodisa ro'y berishining eng ehtimolli soni 30 ga teng bo'lsa, har bir sinashda hodisa ro'y berishi ehtimolini toping.

1224. Tavakkaliga tanlangan detalning nostandard bo‘lish ehtimoli 0,1 ga teng. Standart detalni eng ehtimolli soni 50 ga teng bo‘lishi uchun nechta detal olinishi kerak.

1225. Auksionda o‘rtacha 20% aksiya boshlang‘ich qiymatda sotiladi. 5 aksiyalar paketidan boshlang‘ich qiymatida sotilish ehtimollarini toping: 1) rossa 4 tasi;

2) 2 tadan 4 tagacha bo‘lgani; 3) 2 tadan kam bo‘lgani; 4) 2 tadan ko‘p bo‘limgani; 5) hech bo‘limganda 2 tasi; 6) eng ehtimolli soni.

1226. Yashikda 10 ta oq va 5 ta qora shar bor. Yashikdan tavakkaliga 6 ta shar olindi. Bunda olingan har bir shar yashikka qaytarilib, ular aralashtiriladi. Olingan sharlardan oq shar chiqish ehtimolini toping: 1) rossa 3 ta; 2) 3 tadan 5 tagacha; 3) 3 tadan kam bo‘limgan; 4) 3 tadan ko‘p bo‘limgan; 5) hech bo‘limganda 3 tasi; 6) eng ehtimolli soni.

1227. Oliy matematikadan hisob grafik ishini 50% talaba bajara oldi. Hisob grafik ishini 400 talabandan bajarish ehtimolini toping: 1) 180 talaba; 2) 180 tadan kam bo‘limgan talaba.

1228. Korxonada ishlab chiqarilgan yaroqsiz chiqish ehtimoli 0,2 ga teng. 400 ta mahsulotdan yaroqsiz chiqish ehtimolini toping: 1) 100 tasi; 2) 70 tadan 130 tagacha.

1229. Zavod ishlab chiqargan telefon apparatdan 50% birinchi navli bo‘lishi ma’lum. Zavod ishlab chiqargan 1000 ta telefon apparatdan, birinchi nav bo‘lish ehtimolini toping: 1) 120 tasi; 2) eng ehtimolli soni; 3) 120 tadan kam bo‘limgan; 4) kamida 120 ta va ko‘pi bilan 520 tasi.

1230. Har bir o‘q uzishda o‘qni nishonga tegish ehtimoli 0,0001 ga teng. 5000 ta o‘q uzishda 2 tadan kam bo‘limgan o‘qni nishonga tegish ehtimolini toping.

1231*. Merganning bitta o‘q uzishda nishonga tekkizish ehtimoli 0,8 ga teng. 400 ta o‘q uzunganda, o‘qni nishonga tekkizish ehtimolini toping: 1) 300 ta; 2) kamida 300 ta va ko‘pi bilan 360 ta; 3) kamida 280 ta va ko‘pi bilan 360 ta; 4) eng ehtimolli soni.

74-§. Diskret tasodifiy miqdor. Diskret tasodifiy miqdorning sonli xarakteristikalari

Tasodifiy miqdor tushunchasi ehtimollar nazariyasining asosiy tushunchalaridan biridir.

Tasodifiy miqdor deganda, tasodifga bog'liq ravishda u yoki bu qiymatlarni qabul qiladigan miqdorni tushuniladi.

Mumkin bo'lgan qiymatlari chekli yoki sanoqli bo'lgan tasodifiy miqdorlar **diskret tasodifiy miqdorlar** deb atyiladi.

Faraz qilaylik, X tasodifiy miqdor $x_1, x_2, \dots, x_k, \dots$ qiymatlarni mos ravishda $p_1, p_2, \dots, p_k, \dots$ ehtimolliklar bilan qabul qilsin. Bunday bog'lanishni ifodalovchi $f(x_k) = p_k$ moslik taqsimot qonuni deyiladi va u

X	x_1	x_2	...	x_k	...
P	p_1	p_2	...	p_k	...

kabi tasvirlanadi.

X tasodifiy miqdorning **matematik kutilmasi**, quyidagi formula bilan topiladi:

$$M(x) = x_1 p_1 + x_2 p_2 + \dots + x_n p_n, \quad (47)$$

bunda $p_1 + \dots + p_n = 1$.

Matematik kutilma quyidagi xossalarga ega:

$$1. M(c) = c, \quad c = const.$$

$$2. M(cx) = cM(x).$$

$$3. M(x+y) = M(x) + M(y).$$

4. $M(x) = np$. (Binomial qonunga bo'ysunuvchi tasodifiy miqdor uchun).

$$X_{\text{otqa}} \approx x_1 \cdot p_1 + x_2 \cdot p_2 + \dots + x_k \cdot p_k \approx M(x). \quad (48)$$

X diskret tasodifiy miqdorning **dispersiyasi** quyidagi formula bilan topiladi:

$$D(x) = M[(x - m_x)^2] = M(x^2) - M^2(x). \quad (49)$$

Dispersiya quyidagi xossalarga ega:

1°. $D(c) = 0$, $c = \text{const.}$

2°. $D(cx) = c^2 D(x)$.

3°. $D(x+y) = D(x) + D(y)$.

4°. $D(x) = npq$. (Binomial qonunga bo'y sunuvchi tasodifiy miqdor uchun).

X diskret tasodifiy miqdorning o'rta kvadratik chetlanishi quyidagi formula bilan topiladi:

$$\sigma(x) = \sqrt{D(x)}. \quad (50)$$

1232. Taqsimot qonuni

x_k	2	3	4
p_k	0,5	0,4	0,1

ko'rinishda berilgan diskret tasodifiy miqdorning: matematik kutilmasi, dispersiyasi, o'rta kvadratik chetlanishini toping.

Yechish. Matematik kutilmasi (47) formulaga asosan:

$$M(x) = x_1 \cdot p_1 + x_2 \cdot p_2 + x_3 \cdot p_3 = 2 \cdot 0,5 + 3 \cdot 0,4 + 4 \cdot 0,1 = 2,6.$$

Dispersiya (49) formulaga asosan:

$$\begin{aligned} D(x) &= M(x^2) - M^2(x) = 2^2 \cdot 0,5 + 3^2 \cdot 0,4 + 4^2 \cdot 0,1 - 2,6^2 = \\ &= 2 + 3,6 + 1,6 - 6,76 = 0,44. \end{aligned}$$

O'rta kvadratik chetlanish (50) formulaga asosan:

$$\sigma(X) = \sqrt{D(X)} = \sqrt{0,44} \approx 0,66.$$

1233. x tasodifiy miqdor ikkita mumkin bo'lgan qiymatga ega, uning taqsimot qonunini toping, bunda ($x_2 > x_1$): $p_1 = 0,6$; $M(x) = 1,4$; $D(x) = 0,24$.

Yechish. Masalaning shartiga asosan:

$$p_1 = 1 - p_2 = 1 - 0,6 = 0,4.$$

x_k	x_1	x_2
p_k	0,6	0,4

$$M(x) = x_1 \cdot p_1 + x_2 \cdot p_2 = 0,6 \cdot x_1 + 0,4 \cdot x_2 = 1,4,$$

$$D(x) = x_1^2 \cdot p_1 + x_2^2 \cdot p_2 - m_x^2 = 0,6 \cdot x_1^2 + 0,4 \cdot x_2^2 - 1,4^2 = 0,24.$$

$$\begin{cases} 0,6x_1 + 0,4x_2 = 1,4 \\ 0,6x_1^2 + 0,4x_2^2 = 2,2 \end{cases} \Rightarrow \begin{cases} 6x_1 + 4x_2 = 14 \\ 6x_1^2 + 4x_2^2 = 22 \end{cases} \Rightarrow \begin{cases} x_2 = \frac{7 - 3x_1}{2} \\ 5x_1^2 - 14x_1 + 9 = 0 \end{cases}$$

$$x_{1,2} = \frac{7 \pm \sqrt{49 - 45}}{5} = \frac{7 \pm 2}{5}, \quad x_{1,1} = 1; \quad x_{1,2} = 1,8; \quad x_{2,1} = 2; \quad x_{2,2} = 0,8.$$

Demak, $(1;2)$, $(1,8;0,8)$. Bundan: $(x_2 > x_1)$ shartni bajaruvch javob: $(1;2)$.

Quyidagi masalalarni yeching

1234. Tanga 3 marta tashlandi. Raqamli tomon tushish hodisasining taqsimot qonunini toping.

1235. Tasodifiy miqdorning taqsimot qonuni berilgan:
 $X: \begin{pmatrix} -1 & 0 & 1 & 2 \\ 0,2 & 0,1 & 0,3 & 0,4 \end{pmatrix}$. Uning matematik kutilmasi, dispersiyasi va o'rta kvadratik chetlanishini toping.

1236. Tasodifiy miqdorning taqsimot qonuni berilgan:

$$X: \begin{pmatrix} -1 & 0 & 1 & 2 & 2,5 & 3 \\ 0,1 & 0,1 & 0,2 & 0,3 & 0,2 & 0,1 \end{pmatrix}.$$

Uning matematik kutilmasi, dispersiyasi va o'rta kvadratik chetlanishini toping.

1237. Haydovchi manzilgacha beshta svetaforga duch keladi. Uning har svetofordan to'xtamasdan o'tish ehtimoli $1/3$ ga teng. Haydovchini birinchi to'xtashigacha yoki manzilga yetgunche o'tadigan svetoforlar sonidan iborat tasodifiy miqdorning taqsimot qonunini, matematik kutilmasini va dispersiyasini toping.

1238. Merganning o'q uzishda nishonga tekkazishlari sonidan iborat tasodifiy miqdorning taqsimot qonuni berilgan:

$$X: \begin{pmatrix} 0 & 1 & 2 & 3 & 4 \\ 0,10 & 0,25 & 0,20 & 0,20 & 0,25 \end{pmatrix}$$

Matematik kutilma va dispersiyani hisoblang.

1239. Qutidan oq shar chiqishi sonidan iborat tasodifiy miqdorning taqsimot qonuni berilgan:

$$X: \begin{pmatrix} 0 & 1 & 2 & 3 & 4 \\ 0,20 & 0,15 & 0,20 & 0,20 & 0,25 \end{pmatrix}$$

Matematik kutilma va dispersiyani hisoblang.

1240. X tasodifiy miqdorning taqsimot qatori ikkita mumkin bo'lgan qiymatdan iborat, ($x_2 > x_1$). Tasodifiy miqdorning bu qiymatlardan birini qabul qilish ehtimoli 0,8 ga teng. Agar $M(x) = 3,2$, $D(x) = 0,16$ bo'lsa, tasodifiy miqdorning taqsimot qonunini toping.

1241. X tasodifiy miqdorning taqsimot qatori ikkita mumkin bo'lgan qiymatdan iborat, ($x_2 > x_1$). Tasodifiy miqdorning bu qiymatlaridan birini qabul qilish ehtimoli 0,6 ga teng. Agar $M(x) = 1,4$, $D(x) = 0,24$ bo'lsa, tasodifiy miqdorning taqsimot qonunini toping.

1242. X tasodifiy miqdor ikkita mumkin bo'lgan qiymatga ega, uninig taqsimot qonunini toping, bunda ($x_2 > x_1$):

- 1) $p_1 = 0,9$; $M(x) = 3,1$; $D(x) = 0,09$.
- 2) $p_1 = 0,3$; $M(x) = 3,7$; $D(x) = 0,21$.
- 3) $p_1 = 0,5$; $M(x) = 3,5$; $D(x) = 0,25$.
- 4) $p_1 = 0,7$; $M(x) = 3,3$; $D(x) = 0,21$.

1243*. Qutida 6 ta oq, 4 ta qora shar bor. Qutidan tavakkaliga ketma-ket 5 ta shar olindi. Olingan shar qutiga qayta tashlanib aralashtiriladi. Olingan sharlar oq chiqishidan iborat X tasodifiy miqdorning taqsimot qonunini, matematik kutilmasi va dispersiyasini toping.

75-§. Uzluksiz tasodifiy miqdor. Uzluksiz tasodifiy miqdorning sonli xarakteristikaları

X tasodifiy miqdorning qabul qiladigan qiymatlari chekli yoki cheksiz oraliqni butunlay to'ldirsa, uni **uzluksiz tasodifiy miqdor** deyiladi.

Taqsimotning integral funksiyasi deb, har bir x qiymat uchun X tasodifiy miqdorning x dan kichik qiymat qabul qilish ehtimolini aniqlovchi $F(x)$ funksiyaga aytildi.

$$F(x) = P(X < x). \quad (51)$$

Integral funksiya quyidagi xossalarga ega:

$$\text{I}. \quad 0 \leq F(x) \leq 1.$$

2. $F(x)$ kamaymaydigan funksiya, $x_2 \geq x_1 \Rightarrow F(x_2) \geq F(x_1)$.

3. Agar $x \in [a; b]$ bo'lsa $x \leq a \Rightarrow F(x) = 0$; $x \geq b \Rightarrow F(x) = 1$ bo'ladi.

Taqsimotning $f(x)$ differensial funksiyasi yoki zichlik funksiya deb, integral funksiyadan olingan hosilaga aytildi:

$$f(x) = F'(x). \quad (52)$$

$$P(a < X < b) = \int_a^b f(x) dx = \int_a^b F'(x) dx = F(b) - F(a). \quad (53)$$

$$F(x) = \int_{-\infty}^x f(x) dx. \quad (54)$$

Differensial funksiya quyidagi xossalarga ega:

1. $f(x) \geq 0$.

2. $\int_{-\infty}^{+\infty} f(x) dx = 1$.

$[a; b]$ kesmada X uzluksiz tasodifiy miqdorning matematik kutilmasi, quyidagi formula bilan hisoblanadi:

$$M(x) = \int_a^x x \cdot f(x) dx. \quad (55)$$

Uning dispersiyasi, quyidagi formula bilan hisoblanadi:

$$D(X) = \int_a^x [x - M(x)]^2 \cdot f(x) dx = \int_a^x x^2 \cdot f(x) dx - m_x^2. \quad (56)$$

O'rta kvadratik chetlanishi esa, quyidagi formula bilan hisoblanadi:

$$\sigma(X) = \sqrt{D(X)} \quad (57)$$

1244. Uzluksiz tasodifiy miqdorning integral funksiyasi quyidagi ko'rinishda berilgan:

$$F(x) = \begin{cases} 0 & \text{agar } x \leq 0, \\ x^2 & \text{agar } 0 < x \leq 1, \\ 1 & \text{agar } x > 1. \end{cases}$$

$f(x)$ – zichlik funksiyani, $M(x)$ – matematik kutilmani, $D(X)$ – dispersiyani, $\sigma(X)$ – o'rta kvadratik chetlanishni va $[0,5; 1,5]$ oraliqqa tushish ehtimolini toping.

Yechish. $f(x) = F'(x)$ (52) formulaga asosan:

$$f(x) = \begin{cases} 0 & \text{agar } x \leq 0, \\ 2x & \text{agar } 0 < x \leq 1, \\ 0 & \text{agar } x > 1. \end{cases}$$

Matematik kutilma (55) formulaga asosan:

$$M(X) = \int_a^b x \cdot f(x) dx = \int_0^1 x \cdot 2x dx = 2 \int_0^1 x^2 dx = \frac{2x^3}{3} \Big|_0^1 = \frac{2}{3}.$$

Dispersiya, (56) formula bilan hisoblanadi:

$$D(X) = \int_a^b x^2 \cdot f(x) dx - M^2(X) = \int_0^1 x^2 \cdot 2x dx - \left(\frac{2}{3}\right)^2 = 2 \cdot \frac{x^4}{4} \Big|_0^1 - \frac{4}{9} = \frac{1}{18}.$$

O'rta kvadratik chetlanishi esa, (57) formula bilan hisoblanadi:

$$\sigma(X) = \sqrt{D(X)} = \sqrt{\frac{1}{18}} = \frac{1}{3\sqrt{2}} = \frac{\sqrt{2}}{6}.$$

[0,5;1,5] oraliqqa tushish ehtimolini (53) formula yordamida topamiz:

$$P(0,5 < x < 1,5) = F(1,5) - F(0,5) = 1 - (0,5)^2 = 1 - 0,25 = 0,75.$$

Quyidagi masalalarini yeching

Quyidagi taqsimot funksiyasi bilan berilgan X tasodifiy miqdorning matematik kutilmasi, dispersiyasi va o'rta kvadratik chetlanishini toping:

$$1245. F(x) = \begin{cases} 0, & \text{agar } x \leq 0, \\ cx^2, & \text{agar } 0 < x \leq 1, \\ 1, & \text{agar } x > 1. \end{cases}$$

$$1246. F(x) = \begin{cases} 0, & \text{agar } x \leq 2, \\ c(x^3 - 8), & \text{agar } 2 < x \leq 3, \\ 1, & \text{agar } x > 3. \end{cases}$$

$$1247. F(x) = \begin{cases} 0, & \text{agar } x \leq a, \\ 0,25x^2, & \text{agar } a < x \leq b, \\ 1, & \text{agar } x > b. \end{cases}$$

$$1248. F(x) = \begin{cases} 0, & \text{agar } x \leq 0, \\ cx^3, & \text{agar } 0 < x \leq 2, \\ 1, & \text{agar } x > 2. \end{cases}$$

Quyidagi zichlik funksiyasi bilan berilgan X tasodifiy miqdorning matematik kutilmasi va dispersiyasini toping:

$$1249. f(x) = \begin{cases} 0, & \text{agar } x \leq 1, \\ 2x - 2, & \text{agar } 1 < x \leq 2, \\ 0, & \text{agar } x > 2. \end{cases}$$

$$1250. f(x) = \begin{cases} 0, & \text{agar } x \leq 0, \\ \frac{1}{2} \sin x, & \text{agar } 0 < x \leq \pi, \\ 0, & \text{agar } x > \pi. \end{cases}$$

$$1251. f(x) = \begin{cases} 3^x \ln 3, & \text{agar } x \leq 0, \\ 0, & \text{agar } x > 0. \end{cases}$$

$$1252. f(x) = \begin{cases} 0, & \text{agar } x < 0, \\ cx e^{-x}, & \text{agar } x \geq 0. \end{cases}$$

$$1253. f(x) = \begin{cases} \frac{2x}{a^2}, & \text{agar } x \in (0; a), \\ 0, & \text{agar } x \notin (0; a). \end{cases}$$

$$1254. f(x) = \begin{cases} x, & \text{agar } x \in [0; \sqrt{2}], \\ 0, & \text{agar } x \notin [0; \sqrt{2}]. \end{cases}$$

$$1255. f(x) = \begin{cases} \frac{a}{\sqrt{a^2 - x^2}}, & \text{agar } |x| < a, \text{ bo'lsa,} \\ 0, & \text{agar } |x| \geq a, \end{cases}$$

1) $a = ?$, 2) $P\left(\frac{a}{2}; a\right) = ?$.

$$1256*. f(x) = \frac{1}{x^2 + \pi^2}, \text{ bo'lsa, } P(\pi, +\infty) = ?.$$

76-§. Tekis, ko'rsatkichli va normal taqsimot qonunlari

Taqsimot zichligi

$$f(x) = \begin{cases} \frac{1}{b-a}, & \text{agar } x \in [a; b], \\ 0, & \text{agar } x \notin [a; b], \end{cases} \quad (58)$$

ko'rinishda berilgan uzlusiz tasodifiy miqdorning taqsimot qonuniga $[a; b]$ kesmada **tekis taqsimot** deyiladi.

Tekis taqsimot qonuniga bo'y sunuvchi tasodifiy miqdorlarning sonli xarakteristikalari quyidagicha topiladi:

$$M(x) = \frac{a+b}{2}, \quad D(x) = \frac{(b-a)^2}{12}, \quad \sigma(x) = \frac{b-a}{2\sqrt{3}}, \quad P(\alpha \leq X \leq \beta) = \frac{\beta-\alpha}{b-a}. \quad (59)$$

Taqsimot zichligi

$$f(x) = \begin{cases} 0, & \text{agar } x < 0, \\ \lambda e^{-\lambda x}, & \text{agar } x \geq 0, \end{cases} \quad (60)$$

ko'rinishda berilgan uzlusiz tasodifiy miqdorning taqsimot qonuniga **ko'rsatkichli taqsimot** deyiladi, bunda $\lambda > 0$ – o'zgarmas parametr.

Ko'rsatkichli taqsimot qonuniga bo'ysunuvchi tasodifiy miqdorlarning sonli xarakteristikalari quyidagicha topiladi:

$$M(x) = \frac{1}{\lambda}, \quad D(x) = \frac{1}{\lambda^2}, \quad \sigma(x) = \frac{1}{\lambda}. \quad (61)$$

$$P(\alpha < X < \beta) = e^{-\lambda \alpha} - e^{-\lambda \beta}.$$

$$F(t) = P(T < t) = 1 - e^{-\lambda t} \quad (62)$$

(62) formula bilan, t vaqt davomida uskunaning to'xtab qolish ehtimoli

$$R(t) = P(T > t) = e^{-\lambda t} \quad (63)$$

(63) formula bilan, to'xtovsiz ishlash ehtimoli yoki mustahkamlik funksiyasi.

Taqsimot zichligi

$$f(x) = \frac{1}{\sigma\sqrt{2\pi}} e^{-\frac{(x-\mu)^2}{2\sigma^2}} \quad (64)$$

ko'rinishda berilgan uzlusiz tasodifiy miqdorning taqsimot qonuniga **normal taqsimot** deyiladi, bunda $\mu \in R$, $\sigma > 0$ parametr.

Normal taqsimot qonuniga bo'ysunuvchi tasodifiy miqdorlarning sonli xarakteristikalari quyidagi formula bilan teng:

$$M(x) = \mu, \quad D(x) = \sigma^2, \quad \sigma(x) = \sigma. \quad (65)$$

Normal taqsimot qonuniga bo'ysunuvchi tasodifiy miqdorlarning $[\alpha, \beta]$ oraliqqa tegishli qiymatni qabul qilish ehtimolligi quyidagi formula bilan topiladi:

$$P(\alpha \leq X \leq \beta) = \Phi\left(\frac{\beta-\mu}{\sigma\sqrt{2}}\right) - \Phi\left(\frac{\alpha-\mu}{\sigma\sqrt{2}}\right). \quad (66)$$

Bunda $\Phi(t)$ -Laplas funksiyasi deyiladi va uning qiymatlari 2-jadvaldan topiladi, $\Phi(-t) = -\Phi(t)$.

Normal taqsimot qonuniga bo'ysunuvchi X tasodifiy miqdorni m nuqtaga nisbatan simmetrik masofaga tushish ehtimoli:

$$P(|X - m| < \varepsilon) = \Phi\left(\frac{\varepsilon}{\sigma\sqrt{2}}\right), \quad (67)$$

1257. Bir soat ichida bekatga faqat bitta avtobus kelib to'xtadi. $t=0$ vaqtida bekatga kelgan yo'lovchining avtobusni 10 daqiqadan ortiq kutmasligi ehtimolini toping.

Yechish. $t=0$ vaqtida bekatga kelgan yo'lovchining avtobusni kutish vaqtি $[0;1]$ oraliqda tekis taqsimlangan X tasodifiy miqdor bo'лади. Shu sababli

$$f(x) = \begin{cases} 0 & \text{agar } x \leq 0, \\ 1 & \text{agar } 0 < x \leq 1, \\ 0 & \text{agar } x > 1. \end{cases}$$

Bundan $b=1$, $a=0$, $\alpha=0$, $\beta=10\text{min}=\frac{1}{6}\text{s}$. U holda

$$P\left(0 \leq X < \frac{1}{6}\right) = \frac{\beta - \alpha}{b - a} = \frac{(1/6) - 0}{1 - 0} = \frac{1}{6}.$$

1258. Tekis taqsimot qonuniga bo'ysunuvchi tasodifiy miqdoring taqsimot zichligi

$$f(x) = \begin{cases} h, & \text{agar } x \in [2;8], \\ 0, & \text{agar } x \notin [2;8], \end{cases} \text{ bo'lsa,}$$

$$h = ?, \quad M(x) = ?, \quad D(x) = ?, \quad \sigma(x) = ?,$$

$$P(2,5 < X < 7,5) = ?.$$

Yechish.

$$\int_{-\infty}^{+\infty} f(x) dx = 1 \Rightarrow \int_2^8 h dx = 1 \Rightarrow h x \Big|_2^8 = 1 \Rightarrow 6h = 1 \Rightarrow h = \frac{1}{6}, \quad M(x) = \frac{2+8}{2} = 5,$$

$$D(x) = \frac{(8-2)^2}{12} = \frac{36}{12} = 3, \quad \sigma(x) = \sqrt{3}, \quad P(2,5 \leq X < 7,5) = \frac{7,5-2,5}{6} = \frac{5}{6}.$$

1259. X tasodifiy miqdor ko'rsatkichli taqsimot qonuniga bo'ysunadi va uning taqsimot zichligi:

$$f(x) = \begin{cases} 0, & \text{agar } x < 0, \\ 4e^{-4x}, & \text{agar } x \geq 0. \end{cases}$$

X tasodifiy miqdorning $(0,2;0,5)$ oraliqqa tushish ehtimolini toping.

Yechish. (61) formuladan foydalanamiz:

$$P(0.2 < X < 0.5) = e^{-40.2} - e^{-40.5} = e^{-0.8} - e^{-2} = 0.4493 - 0.1353 = 0.314.$$

1260. t vaqt temir yo'l vokzalida poyezd sostavini tashkil qilish vaqtli bo'lib, u ko'rsatkichli taqsimot qonuniga bo'ysunsin. 1 soat davomida $\lambda=5$, ta poyezd sostavini tashkil qilish mumkin bo'lsin. 1) 30 daqiqadan kam vaqtida; 2) 6 daqiqadan ko'p va 24 daqiqadan kam vaqt davomida, poyezd sostavini tuzish ehtimolini toping.

Yechish. 1) (62) formuladan foydalanamiz: 30 min=0,5 s. ekanidan:

$$F(t) = P(T < 30 \text{ min}) = P(T < 0,5) = 1 - e^{-5 \cdot 0,5} = 1 - e^{-2,5} = 1 - 0,082 = 0,918.$$

2) 6 min=0,1 s. 24 min=0,4 s. ekanidan (61) formuladan foydalanamiz:

$$P(0,1 < X < 0,4) = e^{-5 \cdot 0,1} - e^{-5 \cdot 0,4} = e^{-0,5} - e^{-2} = 0,6065 - 0,1353 = 0,4712.$$

1261. X tasodifiy miqdor moslamaning to'xtovsiz ishlash vaqtli bo'lib, u ko'rsatkichli taqsimot qonuniga bo'ysunadi:

$$f(x) = \begin{cases} 0, & \text{agar } x < 0, \\ 0,02e^{-0,02x}, & \text{agar } x \geq 0. \end{cases}$$

Moslamaning 50 soat davomida uzlusiz ishlash ehtimolini toping.

Yechish. (63) ko'rsatkichli taqsimot formulasidan foydalanamiz:

$$R(50) = e^{-0,02 \cdot 50} = \frac{1}{e} = 0,3679.$$

1262. Normal taqsimot qonuniga bo'ysunuvchi X tasodifiy miqdorning matematik kutilmasi $a=40$, dispersiyasi $\sigma^2=200$ ga teng. X tasodifiy miqdorning (30;80) intervalga tushish ehtimolini toping.

Yechish. (66) normal taqsimot formulasidan foydalanamiz: $\alpha=30$, $\beta=80$, $a=40$, $\sigma=\sqrt{200}=10\sqrt{2}$, va 2-jadvalga asosan:

$$\begin{aligned} P(30 < X < 80) &= 0,5 \left[\Phi\left(\frac{80-40}{10\sqrt{2} \cdot \sqrt{2}}\right) - \Phi\left(\frac{30-40}{10\sqrt{2} \cdot \sqrt{2}}\right) \right] = \\ &= 0,5 [\Phi(2) + \Phi(0,5)] = 0,5 [0,995 + 0,521] = 0,758. \end{aligned}$$

1263. Tayyorlanayotgan detal uzunligining standartdan chetlanishi tasodifiy miqdor bo'lib, u normal taqsimot qonuniga bo'ysunadi. Agar standart uzunlik $a=40$ sm, dispersiyasi $\sigma=0,4$ sm

ga teng bo'lsa, 0,8 ehtimollik bilan qanday aniqlikda uzunlikni ta'minlash mumkin?

Yechish. Masalaning shartiga asosan $P(|X - 40| < \varepsilon) = 0,8$ shartni qanoatlantiruvchi $\varepsilon > 0$ sonni topish talab etilmoqda. (67) formuladan:

$$P(|X - 40| < \varepsilon) = \Phi\left(\frac{\varepsilon}{0,4 \cdot \sqrt{2}}\right) = \Phi(1,77\varepsilon).$$

Bundan,

$$\Phi(1,77\varepsilon) > 0,8 \Rightarrow 1,77\varepsilon > 0,91 \Rightarrow \varepsilon = 0,52.$$

Quyidagi masalalarini yeching

1264. Tekis taqsimot qonuniga bo'ysunuvchi tasodifiy miqdorning taqsimot zichligi

$$f(x) = \begin{cases} h, & \text{agar } x \in [1;4], \\ 0, & \text{agar } x \notin [1;4], \end{cases} \quad \text{bo'lsa, } h = ?, \quad M(x) = ?, \quad D(x) = ?, \quad \sigma(x) = ?, \\ P(1,5 < X < 3,5) = ?. \end{matrix}$$

1265. Tekis taqsimot qonuniga bo'ysunuvchi tasodifiy miqdorning taqsimot zichligi

$$f(x) = \begin{cases} h, & \text{agar } x \in [2;5], \\ 0, & \text{agar } x \notin [2;5], \end{cases} \quad \text{bo'lsa, } h = ?, \quad M(x) = ?, \quad D(x) = ?, \quad \sigma(x) = ?, \\ P(2,5 < X < 4,5) = ?. \end{matrix}$$

1266. Tekis taqsimot qonuniga bo'ysunuvchi tasodifiy miqdorning taqsimot zichligi

$$f(x) = \begin{cases} h, & \text{agar } x \in [1;7], \\ 0, & \text{agar } x \notin [1;7], \end{cases} \quad \text{bo'lsa, } h = ?, \quad M(x) = ?, \quad D(x) = ?, \quad \sigma(x) = ?, \\ P(1,5 < X < 6,5) = ?. \end{matrix}$$

1267. Tekis taqsimot qonuniga bo'ysunuvchi tasodifiy miqdorning taqsimot zichligi

$$f(x) = \begin{cases} h, & \text{agar } x \in [3;10], \\ 0, & \text{agar } x \notin [3;10], \end{cases} \quad \text{bo'lsa, } h = ?, \quad M(x) = ?, \quad D(x) = ?, \quad \sigma(x) = ?, \\ P(3,5 < X < 9,5) = ?. \end{matrix}$$

1268*. Shahar avtobusi bekatga har 5 daqiqada kelib ketadi. Bekatga kelgan yo'lovchini avtobus ketgach 1 daqiqadan so'ng va keyingisidan 2 daqiqa avval kelishi ehtimolini toping.

1269. Ko'rsatkichli taqsimot qonuniga bo'ysunuvchi tasodifiy miqdorning taqsimot zichligi:

$$f(x) = 0,02e^{-0,02x}, \quad x > 0, \quad \text{bo'lsa } M(x), D(x), P(0 < x < 50) = ?.$$

1270. Televizorning to'xtovsiz ishlash vaqtি ko'rsatkichli taqsimot qonuniga bo'ysunadi va $f(t) = 0,002e^{-0,002t}$, $t > 0$. Televizorni 1000 soat davomida to'xtovsiz ishlash ehtimolligini toping.

1271. Ko'rsatkichli taqsimot qonuniga bo'ysunuvchi tasodifiy miqdorning taqsimot zichligi:

$$f(x) = 2,5e^{-2,5x}, x > 0. M(x) = ?, D(x) = ?, \sigma(x) = ?.$$

1272. Ko'rsatkichli taqsimot qonuniga bo'ysunuvchi tasodifiy miqdorning taqsimot zichligi:

$$f(x) = 7e^{-7x}, x > 0 \text{ bo'lsa, } M(x), D(x), P(0,15 < x < 0,6) = ?.$$

1273. t vaqt temir yo'l vokzalida poyezd tarkibini tashkil qilish vaqt bo'lib, u ko'rsatkichli taqsimot qonuniga bo'ysunsin. 1 soat davomida $\lambda = 5$, ta poyezd sostavini tashkil qilish mumkin bo'lsin. Poyezd tarkibini 0,3 coatdan kam bo'lmagan vaqt davomida tuzish ehtimolini toping.

1274. Elementning to'xtovsiz ishlash vaqtini ko'rsatkichli taqsimot qonuniga bo'ysunadi. Agar $F(t) = P(T < t) = 1 - e^{-0,02t}$, $t > 0$ bo'lsa, 24 soat davomida 1) to'xtab qolish, 2) to'xtab qolmaslik ehtimoligini toping.

1275*. Ko'rsatkichli taqsimot qonuniga bo'ysunuvchi tasodifiy miqdorning taqsimot zichligi:

$$f(x) = 3e^{-3x}, x > 0 \text{ bo'lsa, } M(x), D(x), P(0,13 < x < 0,7) = ?.$$

1276. Onuqtaga o'tnatilgan pushkadan Ox o'q yo'nalishida otish bajarilmogda. Snaryadning o'rtacha uchish uzoqligi m . Snaryadning o'rtacha uchish uzoqligini x normal taqsimot qonuniga bo'ysinsin va o'rta kvadratik chetlanishi $\sigma = 80$ m bo'lsa otilgan snaryadlardan necha foizi 120 m dan 160 m masofaga yetib boradi.

1277. Tasodifiy miqdor x normal taqsimot qonuniga bo'ysunsa va matematik kutilmasi m , o'rta kvadratik chetlanishi σ ga teng bo'lsa. x tasodifiy miqdorning 0,01 aniqlik bilan

$$(m, m + \sigma), (m + \sigma, m + 2\sigma), (m + 2\sigma, m + 3\sigma)$$

intervallarga tushish ehtimolini toping.

1278. Vagonning massasi normal taqsimot qonuniga bo'ysunib, matematik kutilmasi 65 t, o'rta kvadratik chetlanishi $\sigma = 0,9t$ ga teng bo'lsin. Navbatdagagi vagonning massasi $(60; 70)$ oraliqda bo'lish ehtimolini toping.

1279. Ustaxonada tayyorlangan sterjenning uzunligi t normal taqsimot qonuniga bo'ysunib, matematik kutilmasi 25 sm , o'rta kvadratik chetlanishi $\sigma = 0,1 \text{ sm}$ ga teng bo'lsin. Navbatdagagi

tayyorlangan sterjenning uzunligi uning matematik kutilmasidan $0,25sm$ dan ortiq xatolik bermaslik ehtimolini toping.

1280. Poyezd 100 vagondan tashkil topgan. Har bir vagon massasining matematik kutilmasi 65 tonna va o'rta kvadratik chetlanishi $\sigma = 0,9$ tonnaga teng bo'lsin. Lokomativ 6600 tonna massali sostavni tortishi mumkin, aks holda ikkinchi lokomativni qo'shishga to'g'ri keladi. Ikkinchi lokomativ kerak bo'lmaslik ehtimolini toping.

1281*. Avtomat sharchalar tayyorlaydi. x -sharchaning diametri bo'lsin. Bu diametrni loyihadagi o'lchamdan chetlanishi absolyut qiymat bo'yicha $0,7$ mm dan kichik bo'lsa, sharcha yaroqli hisoblanadi. x tasodifiy miqdor $\sigma = 0,4$ o'racha kvadratik chetlanish bilan normal taqsimlangan bo'lsa, tayyorlangan 100 ta sharchadan nechtasi yaroqli bo'ladi.

77-§. Chebishev tengsizligi. Katta sonlar qonuni.

Markaziy limit teorema

Lemma. (Chebishev tengsizligi) x -ixtiyoriy tasodifiy miqdor, $M(x)$, $D(x)$ mos ravishda uning matematik kutilmasi va dispersiyasi, ε -istalgan musbat son bo'lsin. U holda

$$P(|X - M(x)| < \varepsilon) \geq 1 - \frac{D(x)}{\varepsilon^2} \quad (68)$$

tengsizlik bajariladi, bu yerda $P(|X - M(x)| < \varepsilon)$ - x tasodifiy miqdorning matematik kutilmasidan chetlanishining ε dan kichik bo'lish ehtimoli.

Teorema (Chebishev teoremasi). X_1, X_2, \dots, X_n juft-jufti bilan bog'liqmas bir xil taqsimotga ega tasodifiy miqdorlar ketma-ketligi, ya'ni $M(X_i) = a$, $D(X_i) = \sigma^2$ ($i = 1, n$) bo'lsin. U holda istalgan $\varepsilon > 0$ son uchun

$$\lim_{n \rightarrow \infty} \left(\left| \frac{X_1 + X_2 + \dots + X_n}{n} - a \right| < \varepsilon \right) = 1 \quad (69)$$

bo'ladi.

Teorema (Bernulli teoremasi). k Bernulli sxemasida n ta sinashdagi A hodisaning ro'y berishlar soni, $p = P(A)$ bitta sinashda ro'y berish ehtimoli bo'lsin. U holda quyidagi tenglik o'rinali bo'ladi:

$$\lim_{n \rightarrow \infty} \left(\left| \frac{k}{n} - p \right| < \varepsilon \right) = 1. \quad (70)$$

Teorema (Markaziy limit teorema). Agar X_1, X_2, \dots, X_n - bog'liqmas tasodifiy miqdorlar bo'lib, chekli $M(X_i) = a$ matematik kutilish va $D(X_i) = \sigma^2$ dispersiyaga ega bo'lgan bir xil taqsimot qonuniga ega bo'lsa, u holda n cheksiz ortganda

$$\frac{\sum_{i=1}^n X_i - na}{\sigma \sqrt{n}} \quad (71)$$

ning taqsimot qonuni matematik kutilishi 0 va dispersiyasi 1 bo'lgan normal taqsimotga yaqinlashadi.

Izohlar. 1. Agar $\sum_{i=1}^n X_i$ miqdor uchun markaziy limit teoremasining shartlari bajarilsa, u holda bu miqdor asimptotik normal taqsimotga ega deyiladi.

2. Avval ko'rib chiqilgan Muavr-Laplas teoremlari markaziy limit teoremaning variantlari bo'ladi.

1282. x tasodifiy miqdorning o'z matematik kutilishidan chetlanishi o'rtacha kvadratik chetlanishining uch baravaridan kichik bo'lish ehtimolini baholang.

Yechish. (68) formulada $\varepsilon = 3\sigma$ deb, ehtimollikni quyidagicha hisoblaymiz:

$$P(|X - M(x)| < 3\sigma) \geq 1 - \frac{\sigma^2}{(3\sigma)^2} = 1 - \frac{1}{9} = \frac{8}{9} \approx 0,8889,$$

1283. Dengizning chuqurligi sistematik xatoliklarga ega bo'lmagan uskuna bilan o'chanadi. O'chovlarning o'rtacha kvadratik chetlanishi 15 m dan oshmaydi. 0,9 dan kam bo'lmagan ehtimol bilan o'chashlarning o'rta arifmetigi (dengiz chuqurligi) a dan modul bo'yicha 5 m dan kam farq qiladi deb tasdiqlash uchun nechta bog'liqmas o'chashlar o'tkazilishi kerak?

Yechish. Dengiz chuqurligining n ta bog'liqmas o'chashlar natijalarini X bilan belgilaymiz. Masalaning shartiga ko'ra: $\varepsilon = 5$, $D(x) = \sigma^2 = 225$. Chebishev tengsizligini qanoatlantiruvchi n ni topamiz:

$$P\left\{\left|\frac{1}{n} \sum_{i=1}^n X_i - a\right| < 5\right\} \geq 1 - \frac{225}{25n} \geq 0,9.$$

Bundan $0,1 \geq 9/n \Rightarrow n \geq 90$.

Demak, 90 dan kam bo'Imagan o'Ichashlar o'tkazilishi kerak.

1284. Texnologik uskuna tayyorlanayotgan detal uzunligining o'rtacha kvadratik chetlanishi bu uzunlikning matematik kutilishidan 0,05 sm dan ko'p bo'lmasligini ta'minlaydi. 50 ta detal o'Ichangan. Bu o'Ichashlarning o'rta arifmetigi haqiqiy matematik kutilishdan 0,02 dan ortiq bo'Imagan chetlanishining ehtimolini toping.

Yechish. Masalaning shartiga asosan $\varepsilon = 0,02$, $D(x) = 0,5^2$, $n = 50$.

U holda Chebishev tengsizligiga asosan:

$$P\left\{\left|\frac{1}{50} \sum_{i=1}^{50} X_i - a\right| < 0,02\right\} \geq 1 - \frac{0,05^2}{50 \cdot 0,02^2} = 0,875.$$

1285. Qo'lyozmaning bitta betida xato bo'lishi ehtimoli 0,2 ga teng. 400 betdan iborat qo'lyozmada xato bo'lishining nisbiy chastotasi mos ehtimoldan modul bo'yicha 0,05 dan kam farq qilishi ehtimolini toping.

Yechish. Masala shartiga asosan:

$$p = 0,2, q = 0,8, n = 400, \varepsilon = 0,05.$$

Bernulli teoremasiga asosan:

$$P\left\{\left|\frac{1}{n} - 0,2\right| < 0,005\right\} \geq \left(1 - \frac{pq}{n\varepsilon^2}\right) = 1 - \frac{0,2 \cdot 0,8}{400 \cdot 0,05^2} = 0,84.$$

1286. Har biri $[0;4]$ kesmada tekis taqsimlangan 75 ta bog'liq mas tasodifiy miqdorlar yig'indisining zichligi uchun taqribiliy ifodani toping va bu yig'indi 120 dan 160 gacha bo'lishi ehtimolini toping.

Yechish. $X = \sum_{i=1}^{75} X_i$, bunda $X_i \sim [0;4]$ kesmada tekis taqsimlangan tasodifiy miqdorlar bo'lsin.

$$a_i = M(X_i) = \frac{4+0}{2} = 2, D(X_i) = \frac{(4-0)^2}{12} = \frac{4}{3},$$

bo'ladi. Demak, markaziy limit teoremasining shartlari bajariladi. Bundan

$$m_x = M\left(\sum_{t=1}^{75} X_t\right) = \sum_{t=1}^{75} M(X_t) = 75 \cdot 2 = 150, \quad \sigma_x^2 = D\left(\sum_{t=1}^{75} X_t\right) = 75 \cdot \frac{4}{3} = 100.$$

U holda

$$f(x) = \frac{1}{\sigma_x \sqrt{2\pi}} e^{-\frac{(x-m_x)^2}{2\sigma_x^2}} = \frac{1}{10\sqrt{2\pi}} e^{-\frac{(x-150)^2}{200}}.$$

Yig'indi 120 dan 160 gacha bo'lish ehtimolini topamiz:

$$\begin{aligned} P(120 \leq X \leq 160) &= \Phi\left(\frac{160 - 150}{10}\right) - \Phi\left(\frac{120 - 150}{10}\right) = \\ &= \Phi(1) + \Phi(3) = 0,3413 + 0,4987 \approx 0,84 \end{aligned}$$

Quyidagi masalalarni yeching

1287. Qurilish firmasining bir kunlik sement sarfi 1 tonna. Bu tasodifiy miqdorning o'rtacha kvadratik chetlanishi 200 kg dan oshmaydi. Ixtiyoriy tarlangan kunda firmaning sement sarfi 2 tonnadan oshmasligi ehtimolini toping.

1288. Har bir sinovda hodisaning ro'y berish ehtimoli 0,25 ga teng. Agar 800 ta sinash o'tkazilishi kerak bo'lsa, A hodisaning ro'y berishlar soni 150 dan 250 gacha bo'lish ehtimolini toping.

1289. Avtomatdan standart detalning chiqish ehtimoli 0,96 ga teng. Chebishev tengsizligidan foydalanib, 2000 detal orasida nostandard detallar sonini 60 tadan 100 tagacha bo'lishini baholang.

1290. Depozitga qo'yilgan aksiyalarning talab qilinishi ehtimoli 0,08 ga teng. 1000 ta mijozdan kamida 70 tasi va ko'pi bilan 90 tasi aksiyalarni talab qilish ehtimolini toping.

1291. 900 ta sinashning har birida hodisaning ro'y berish ehtimoli 0,7 ga teng. Bernulli teoremasidan foydalanib, hodisaning ro'y berishlar soni 600 tadan 660 tagacha bo'lish ehtimolini toping.

1292. O'g'il va qiz bolalar tug'ilish ehtimollari bir xil bo'lsa, 1000 ta tug'ilgan bola orasida qiz bolalar soni 465 bilan 535 orasida bo'lish ehtimolini Bernulli teoremasi yordamida toping.

1293. x tasodifiy miqdorning taqsimot qonuni berilgan:

$$\begin{pmatrix} x_n: 0,3 & 0,6 \\ p_n: 0,2 & 0,8 \end{pmatrix} |X - M(X)| < 0,2$$
 bo'lish ehtimolini toping.

1294. x tasodifiy miqdorning taqsimot qonuni berilgan:

$$\begin{pmatrix} x_n: 3 & 5 \\ p_n: 0,6 & 0,4 \end{pmatrix} |X - M(X)| < 1,3$$
 bo'lish ehtimolini toping.

1295. [0;0,25] kesmada tasodifiy ravishda 162 ta son olingan. Ularning yig'indisi 22 bilan 26 orasida bo'lish ehtimolini toping.

1296*. X_i bog'liqmas tasodifiy miqdorlar $[0;1]$ kesmada tekis taqsimlangan. $Y = \sum_{i=1}^{100} X_i$ tasodifiy miqdorning taqsimot qonuni va $P(55 < Y < 70)$ ni toping.

78-§. Ikki o'lchovli tasodifiy miqdorlar va ularning sonli xarakteristikalarini

Ikki o'lchovli tasodifiy miqdorlar sistemasining korrelatsiya momenti va korrelatsiya koefitsiyenti

Diskret ikki o'lchovli tasodifiy miqdorlarni (x_i, y_j) ko'rinishda belgilanadi. Diskret ikki o'lchovli tasodifiy miqdorlarni taqsimot qonuni quyidagi

$X \backslash Y$	x_1	x_2	x_3	\dots	x_n
y_1	P_{11}	P_{21}	P_{31}	\dots	P_{n1}
y_2	P_{12}	P_{22}	P_{32}	\dots	P_{n2}
\dots	\dots	\dots	\dots	\dots	\dots
y_m	P_{1m}	P_{2m}	P_{3m}	\dots	P_{nm}

Jadval ko'rinishida beriladi va $(X=x_i, Y=y_j)$, ($i=\overline{1, n}; j=\overline{1, m}$) hodisalar to'liq gruppaga tashkil qilgani uchun, jadvalning barcha kataklarining ehtimollari yig'indisi 1 ga teng.

$$\sum_{i=1}^n \sum_{j=1}^m P_{ij} = 1. \quad (72)$$

x va y tasodifiy miqdorlar (X, Y) diskret tasodifiy miqdorlarning tashkil etuvchilari deyiladi. Tashkil etuvchilar uchun quyidagi formulalar o'rinni:

$$P(X=x_i) = \sum_{j=1}^m P_{ij}, \quad P(Y=y_j) = \sum_{i=1}^n P_{ij} \quad (73)$$

(X, Y) ning taqsimot qonunini bilgan holda x ning va y ning taqsimot qonunini chiqarish mumkin.

Ikki o'lchovli diskret tasodifiy miqdorlarning tashkil etuvchilarining matematik kutilmalarini quyidagi formulalar yordamida topiladi:

$$M(X) = x_1 \sum_{j=1}^m p_{1j} + x_2 \sum_{j=1}^m p_{2j} + \dots + x_n \sum_{j=1}^m p_{nj}, \quad (74)$$

$$M(Y) = y_1 \sum_{i=1}^n p_{i1} + y_2 \sum_{i=1}^n p_{i2} + \dots + y_m \sum_{i=1}^n p_{im}.$$

Ularning dispersiyasi quyidagi formulalar yordamida topiladi:

$$\begin{aligned} D(X) &= x_1^2 \sum_{j=1}^m p_{1j} + x_2^2 \sum_{j=1}^m p_{2j} + \dots + x_n^2 \sum_{j=1}^m p_{nj} - M^2(X), \\ D(Y) &= y_1^2 \sum_{i=1}^n p_{i1} + y_2^2 \sum_{i=1}^n p_{i2} + \dots + y_m^2 \sum_{i=1}^n p_{im} - M^2(Y) \end{aligned} \quad (75)$$

O'rtacha kvadratik chetlanishlar quyidagi formulalar yordamida topiladi:

$$\sigma(X) = \sqrt{D(X)}, \quad \sigma(Y) = \sqrt{D(Y)}. \quad (76)$$

Ikki o'lchovli $(X;Y)$ uzluksiz tasodifiy miqdorning qiymati $x < X < x + \Delta x, y < Y < y + \Delta y$ ni qanoatlantirish ehtimoli $P(x < X < x + \Delta x, y < Y < y + \Delta y)$ ko'rinishda belgilanadi.

1-ta'rif. Agar $\Delta\rho = \sqrt{(\Delta x)^2 + (\Delta y)^2}$ ga nisbatan yuqori tartibli cheksiz kichik miqdorgacha aniqlikda

$$P(x < X < x + \Delta x, y < Y < y + \Delta y) \approx f(x, y) \Delta x \Delta y \quad (77)$$

tenglik bajarilsa, $f(x, y)$ funksiya ikki o'lchovli $(X;Y)$ tasodifiy miqdorning taqsimot zichligi deyiladi. (77) ni qisqacha quyidagi ko'rinishda ham yozish mumkin

$$P[(X, Y) \in D] \approx f(x, y) \Delta x \Delta y. \quad (78)$$

Teorema. Taqsimot zichligi $f(x, y)$ bo'lgan ikki o'lchovli $(X;Y)$ tasodifiy miqdorni D sohada yotish ehtimoli, $f(x, y)$ funksiyanidan olingan ikki o'lchovli integral bilan ifodalanadi, ya'ni

$$P[(X, Y) \in D] \approx \iint_D f(x, y) dx dy. \quad (79)$$

Teoremadan quyidagi natijalar bevosita kelib chiqadi:

1º. Agar D soha $\alpha < x < \beta, \gamma < y < \delta$ to'g'ri chiziqlar bilan chegaralangan to'g'ri to'rtburchak bo'lsa, u holda

$$P(\alpha < x < \beta, \gamma < y < \delta) = \iint_{\alpha \beta \gamma \delta} f(x, y) dx dy.$$

$$2^0. \int_{-\infty}^{+\infty} \int_{-\infty}^{+\infty} f(x,y) dx dy = 1.$$

2-ta'rif. Ushbu $F(x,y) = \int_{-\infty}^{x_0} \int_{-\infty}^{y_0} f(u,v) du dv$ funksiya ikki o'lchovli $(X;Y)$ tasodifiy miqdor ehtimollari taqsimotining integral funksiyasi deb ataladi.

2-ta'rifdan ko'rindikli $f(x,y) = \frac{\partial^2 F}{\partial x \partial y}$ munosabat o'rini.

Zichlik funksiyaning tashkil etuvchilari

$$f_1(x) = \int_{-\infty}^{+\infty} f(x,y) dy, \quad f_2(y) = \int_{-\infty}^{+\infty} f(x,y) dx \quad (80)$$

formula bilan topiladi.

Tashkil etuvchilarning differensial funksiyalarini bilgan holda matematik kutilish va dispersiya quyidagi formula bilan topiladi:

$$M(x) = \int_{-\infty}^{+\infty} x f_1(x) dx, \quad M(y) = \int_{-\infty}^{+\infty} y f_2(y) dy. \quad (81)$$

$$D(x) = \int_{-\infty}^{+\infty} [x - M(x)]^2 f_1(x) dx = \int_{-\infty}^{+\infty} x^2 f_1(x) dx - M^2(x), \quad (82)$$

$$D(y) = \int_{-\infty}^{+\infty} [y - M(y)]^2 f_2(y) dy = \int_{-\infty}^{+\infty} y^2 f_2(y) dy - M^2(y).$$

Tashkil etuvchilar topilmagan bo'lsa, u holda matematik kutilish va dispersiya quyidagi formula bilan topiladi:

$$M(x) = \iint_D x f(x,y) dx dy, \quad M(y) = \iint_D y f(x,y) dx dy. \quad (83)$$

$$D(x) = \iint_D [x - M(x)]^2 f(x,y) dy dx = \int_{-\infty}^{+\infty} x^2 f(x,y) dx dy - M^2(X),$$

$$D(y) = \iint_D [y - M(y)]^2 f(x,y) dy dx = \int_{-\infty}^{+\infty} y^2 f(x,y) dx dy - M^2(Y). \quad (84)$$

Bunda integrallarning chegaralari $(X;Y)$ tasodifiy miqdorlar sistemasining qabul qilishi mumkin bo'lgan soha bo'yicha olinadi.

Korrelatsiya momenti va korrelatsiya koeffitsiyenti tasodifiy miqdorlar sistemasining sonli xarakteristikalari hisoblanadi.

3-ta'rif. X va Y tasodifiy miqdorlarning K_{xy} **korrelatsion momenti** deb, bu miqdorlar chetlanishlari kopaytmasining matematik kutilmasiga aytildi:

$$K_{xy} = M[(X - M(X))(Y - M(Y))]. \quad (85)$$

Bu ifodani diskret tasodifiy miqdorlar uchun quyidagi

$$K_{xy} = \sum_{i=1}^m \sum_{j=1}^n (x_i - M(X))(y_j - M(Y)) p(x_i, y_j) \quad (86)$$

ko'rinishda, uzluksiz tasodifiy miqdorlar uchun quyidagi

$$K_{xy} = \int_{-\infty}^{+\infty} \int_{-\infty}^{+\infty} (x - M(X))(y - M(Y)) f(x, y) dx dy \quad (87)$$

ko'rinishda yozish mumkin.

4-ta'rif: X va Y tasodifiy miqdorlarning **korrelatsion koefitsiyenti** deb, korrelatsiya momentining bu miqdorlar o'rtacha kvadratik chetlanishlari ko'paytmasi nisbatiga aytildi:

$$r_{xy} = \frac{k_{xy}}{\sigma_x \cdot \sigma_y}. \quad (88)$$

Agar X va Y tasodifiy miqdorlarning korrelatsion momenti yoki korrelatsiya koefitsiyenti noldan farqli bo'lsa, ular korrelatsiyalangan deyiladi, agar korrelatsiya momenti nolga teng bo'lsa, ular korrelatsiyalaganmagan deyiladi.

1297. Ushbu taqsimot qonuniga ega bo'lgan ikki o'lchovli tasodifiy miqdorlarning tashkil etuvchilarga ajrating.

\backslash	x	x_1	x_2	x_3
y				
y_1	0,10	0,30	0,20	
y_2	0,06	0,18	0,16	

Yechish.

$$P(x_1) = 0,10 + 0,06 = 0,16,$$

$$P(x_2) = 0,30 + 0,18 = 0,48,$$

$$P(x_3) = 0,20 + 0,16 = 0,36.$$

$$P(y_1) = 0,10 + 0,30 + 0,20 = 0,60,$$

$$P(y_2) = 0,06 + 0,18 + 0,16 = 0,40.$$

Bundan $\begin{pmatrix} x_i: & x_1 & x_2 & x_3 \\ p_i: & 0,16 & 0,48 & 0,36 \end{pmatrix}, \begin{pmatrix} y_i: & y_1 & y_2 \\ p_i: & 0,60 & 0,40 \end{pmatrix}$.

1298. Taqsimot qonuni

$x_i \backslash y_i$	1	2	3
2	0,1	0,2	0,1
4	0,3	0,1	0,2

ko‘rinishda berilgan $(X;Y)$ tasodifiy miqdorning tashkil etuvchilarining matematik kutilmalari, dispersiyalari va o‘rta kvadratik chetlanishlarini toping.

Yechish. Matematik kutilmalari (74) formulaga asosan

$$M(X) = 1 \cdot (0,1 + 0,3) + 2 \cdot (0,2 + 0,1) + 3 \cdot (0,1 + 0,2) = 1,9,$$

$$M(Y) = 2 \cdot (0,1 + 0,2 + 0,1) + 4 \cdot (0,3 + 0,1 + 0,2) = 3,2.$$

Dispersiyalari (75) formulalarga asosan

$$D(X) = 1^2 \cdot (0,1 + 0,3) + 2^2 \cdot (0,2 + 0,1) + 3^2 \cdot (0,1 + 0,2) - 1,9^2 = 0,69,$$

$$D(Y) = 2^2 \cdot (0,1 + 0,2 + 0,1) + 4^2 \cdot (0,3 + 0,1 + 0,2) - 3,2^2 = 0,96.$$

O‘rta kvadratik chetlanishlarini (76) formulalarga asosan

$$\sigma(X) = \sqrt{0,69} = 0,83, \quad \sigma(Y) = \sqrt{0,96} = 0,98.$$

1299. $f(x,y) = \begin{cases} a(x+y), & (x,y) \in [0;3], \\ 0, & (x,y) \notin [0;3], \end{cases}$ differensial funksiya

bilan berilgan uzluksiz tasodifiy miqdor uchun

a, $M(X)$, $M(Y)$, $D(X)$, $D(y)$, $\sigma(X)$, $\sigma(Y)$ – kattaliklarni aniqlang.

Yechish. $a \int_0^3 \int_0^3 (x+y) dx dy = 1$ ekanligidan

$$\begin{aligned} a \int_0^3 \int_0^3 (x+y) dx dy &= a \int_0^3 dx \int_0^3 (x+y) dy = a \int_0^3 \left(xy + \frac{1}{2} y^2 \right) \Big|_{y=0}^{y=3} dx = \\ &= a \int_0^3 \left(3x + \frac{9}{2} \right) dx = a \left(\frac{3}{2} x^2 + \frac{9}{2} x \right) \Big|_0^3 = 27a \Rightarrow a = \frac{1}{27}. \end{aligned}$$

$$M(X) = \frac{1}{27} \int_0^3 \int_0^3 x(x+y) dx dy = \frac{1}{27} \int_0^3 dx \int_0^3 (x^2 + xy) dy =$$

$$= \frac{1}{27} \int_0^3 \left(x^2 y + x \frac{y^2}{2} \right)_{y=0}^{y=3} dx = \frac{1}{27} \int_0^3 \left(3x^2 + \frac{9}{2}x \right) dx = \frac{1}{27} \left(x^3 + \frac{9}{4}x^2 \right) \Big|_0^3 = \frac{7}{4}.$$

$$\begin{aligned} D(X) &= \frac{1}{27} \int_0^3 \int_0^3 x^2 (x+y) dx dy - \left(\frac{7}{4} \right)^2 = \frac{1}{27} \int_0^3 dx \int_0^3 (x^3 + x^2 y) dy - \frac{49}{16} = \\ &= \frac{1}{27} \int_0^3 \left(x^3 y + x^2 \frac{y^2}{2} \right)_{y=0}^{y=3} dx - \frac{49}{16} = \frac{1}{27} \int_0^3 \left(3x^3 + \frac{9}{2}x^2 \right) dx - \frac{49}{16} = \\ &= \frac{1}{27} \left(\frac{3}{4}x^4 + \frac{3}{2}x^3 \right) \Big|_0^3 - \frac{49}{16} = \frac{1}{27} \left(\frac{243}{4} + \frac{81}{2} \right) - \frac{49}{16} = \frac{15}{4} - \frac{49}{16} = \frac{11}{16}. \end{aligned}$$

$$\sigma(X) = \sqrt{D(X)} = \sqrt{\frac{11}{16}} = \frac{\sqrt{11}}{4}.$$

$M(Y)$, $D(Y)$ va $\sigma(Y)$ lar ham shu usulda topiladi.

1300. X va Y tasodifiy miqdorlar chiziqli $y = ax + b$, $a \neq 0$, bog'lanishga ega. Korrelyatsiya koefisiyentini va korrelatsiya momentini toping.

Yechish. Korrelyatsiya koefisiyentini topamiz, (85) formuladan:

$$\begin{aligned} K_{xy} &= M[(X - M(X))(Y - M(y))] = M(XY) - M(X)M(Y) = \\ &= M(ax^2 + bx) - M(X)M(ax + b) = aM(x^2) + bM(X) - \\ &\quad - aM^2(X) - bM(X) = a[M(x^2) - M^2(x)] = a\sigma_x^2. \end{aligned}$$

Tasodifiy miqdorning dispersiyasini hisoblaymiz:

$$D(y) = D(ax + b) = a^2 D(x) = a^2 \sigma_x^2.$$

Bundan $\sigma_y = |a| \sigma_x$. U holda

$$|r_{xy}| = \frac{|a| \sigma_x^2}{|a| \sigma_x^2} = 1.$$

Natija, $a > 0$ bo'sha $r_{xy} = 1$, $a < 0$ bo'sha $r_{xy} = -1$.

Quyidagi masalalarni yeching

1301. $(X; Y)$ tasodifiy miqdorlar sistemasining taqsimot qonuni berilgan.

$X_i \backslash Y_j$	X_1	X_2	X_3
Y_1	0,10	0,30	0,20
Y_2	0,06	0,18	0,16

Tashkil etuvchilarning taqsimot qonunlarini toping.

1302. $(X;Y)$ tasodifiy miqdorlar sistemasining taqsimot qonuni berilgan.

$X \backslash Y$	-1	0	1	2
1	0,10	0,25	0,30	0,15
2	0,10	0,05	0,00	0,05

Quyidagilarni toping:

- 1) tashkil etuvchilarning taqsimot qonunlarini;
- 2) $y=2$ da X tasodifiy miqdorning taqsimot qonunini;
- 3) $x=1$ da Y tasodifiy miqdorning taqsimot qonunini;
- 4) $P(Y < X)$.

1303. Ikki o'lchovli $(X;Y)$ tasodifiy miqdorning taqsimot zichligi

$$f(x,y) = \frac{C}{(1+x^2)(1+y^2)}$$

formula bilan berilgan. Quyidagilarni toping: 1) C ni; 2) $F(x,y)$; 3) $P(x < 1, Y < 1)$ ni; 4) $f_1(x)$ va $f_2(y)$ ni.

1304. Ikki o'lchovli $(X;Y)$ tasodifiy miqdorning taqsimot zichligi

$$f(x,y) = \begin{cases} ce^{-x-y}, & x \geq 0, y \geq 0, \\ 0, & x < 0, y < 0, \end{cases}$$

formula bilan berilgan. Quyidagilarni toping: 1) C ni; 2) $F(x,y)$; ni
3) $F_1(x)$ va $F_2(y)$ ni; 4) $f_1(x)$ va $f_2(y)$ ni; 5) $P(x > 0, Y < 1)$ ni.

1305. Bitta o'q otishda nishonga tekkazish ehtimoli 1-mergan uchun 0,4 ga, 2-mergan uchun 0,6 ga teng. Bir-biriga bog'liq bo'limgan holda har ikki mengan ikkitadan o'q otgan. Quyidagilarni toping: 1) X va Y tasodifiy miqdorlarning taqsimot qonumini; 2) $(X;Y)$ tasodifiy miqdorlar sistemasining taqsimot qonuni.

1306. $(X;Y)$ tasodifiy miqdorlar sistemasining taqsimot qonuni berilgan.

X \ Y	1	2	3	4
1	0,007	0,004	0,11	0,11
2	0,08	0,11	0,06	0,08
3	0,09	0,13	0,10	0,02

K_{xy} –korrelatsiya koeffisiyentini toping.

1307. Ikki o‘lchovli $(X;Y)$ tasodifiy miqdorning taqsimot zichligi

$$f(x,y) = \begin{cases} x+y, & (x,y) \in D, \\ 0, & (x,y) \notin D, \end{cases}$$

formula bilan berilgan. X tasodifiy miqdorning matematik kutilishi va dispersiyasini toping.

1308. Ikki o‘lchovli $(X;Y)$ tasodifiy miqdorning taqsimot zichligi

$$f(x,y) = \begin{cases} \frac{1}{4} \sin x \sin y, & S = (0 \leq x, y \leq \pi), \\ 0, & (x,y) \notin S, \end{cases}$$

formula bilan berilgan. X va Y tashkil etuvchilarning bog‘liqmas ekanini ko‘rsating.

79-§. Matematik statistikaning asosiy tushunchalari. Poligon va gistogramma

Statistika tabiatda va jamiyatda kechadigan ommaviy hodisalarini o‘rganadi.

Matematik statistikaning vazifasi statistik ma'lumotlarni to‘plash, ularni tahlil qilish va shu asosda ba’zi bir xulosalar chiqarishdan iborat.

Tanlanma to‘plam yoki tanlanma deb tasodifiy ravishda ajratib olingan obyektlar to‘plamiga aytildi.

Bosh to'plam deb, tanlanma ajratilgan obyektlar to'plamiga aytiladi.

Bosh yoki tanlanma to'plamning **hajmi** deganda, bu to'plam-dagi obyektlar soni tushuniladi.

Agar tanlanma to'plam bosh to'plamning deyarli bercha xususiyatlarini o'zida saqlasa, u holda bunday tanlanma vakolatliti **tanlanma** deyiladi.

Faraz qilaylik, bosh to'plamdan tanlanma olinib, bunda x_i qiymat n_1 marta x_2 qiymat n_2 marta va hokazo x_i qiymat n_i marta kuzatilgan bo'lsin.

$$\underbrace{x_1, \dots, x_1}_{n_1 \text{ marta}}, \underbrace{x_2, \dots, x_2}_{n_2 \text{ marta}}, \dots, \underbrace{x_i, \dots, x_i}_{n_i \text{ marta}}, \dots, \underbrace{x_k, \dots, x_k}_{n_k \text{ marta}}$$

$n_1 + n_2 + \dots + n_k = n$ ta sinov

Shu vaziyatda kuzatilgan x_i qiymatlar variantalar deyiladi.

x_i larni o'sish tartibida x_1, x_2, \dots, x_n ko'rinishda yozib chiqsak, hosil bo'lgan qator **variatsion qator** deyiladi.

n_i songa x_i qiymatning **chastotasi** deyiladi.

$$W_i = \frac{n_i}{n} \quad (89)$$

(89) formula x_i qiymatning nisbiy chastotasi deyiladi.

Bu yerda x_1, x_2, \dots, x_n larni X tasodifiy miqdorming qabul qilgan qiymatlari sifatida qarash mumkin.

Ushbu

X	x_1	...	x_k
W	$W_1 = \frac{n_1}{n}$...	$W_k = \frac{n_k}{n}$

jadvalga X ning empirik yoki statistik taqsimoti deyiladi.

X	x_1	...	x_k
n_i	n_1	...	n_k

jadvalni ham nazarda tutiladi.

X tasodifiy miqdor uzlaksiz bo'lganda uning statistik taqsimoti

I	(ξ_0, ξ_1)	(ξ_1, ξ_2)	...	(ξ_{k-1}, ξ_k)
W	W_1	W_2	...	W_k

jadval yordamida beriladi. Bunda, W_i - X ning $(\xi_{i-1}; \xi_i)$ intervaldagи qiymatlarni qabul qilish chastotasi.

Taqsimotning empirik funksiyasi (tanlanmaning taqsimot funksiyasi) deb, har bir x qiymat uchun $X < x$ hodisaning nisbiy chastotasini aniqlaydigan $F^*(x)$ funksiyaga aytildi:

$$F^*(x) = \frac{n_x}{n}, \quad (90)$$

bu yerda, n - tanlanmaning hajmi, n_x - x dan kichik variantalar soni.

Empirik funksiyaning asosiy xossalari:

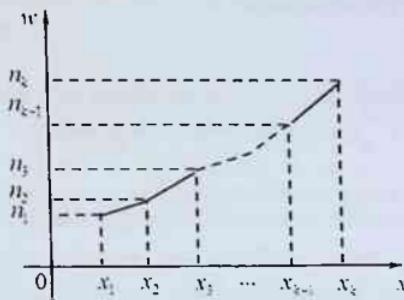

$$1^\circ. 0 \leq F^*(x) \leq 1.$$

2^o. $F^*(x)$ - kamaymaydigan funksiyadir.

3^o. Agar x_1 eng kichik varianta, x_k eng katta variant bo'lsa, u holda $x < x_1$ bo'lganda $F^*(x) = 0$, $x > x_k$ bo'lganda

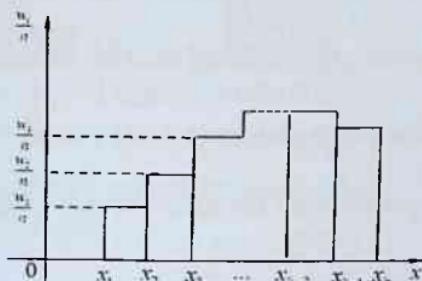

$$F^*(x) = 1.$$

Chastotalar poligoni deb, kesmalari $(x_1, n_1), \dots, (x_k, n_k)$ nuqtalarini tutashtiradigan siniq chiziqdandan iborat figuraga aytildi. (1-shakl).

1-shakl.

Chastotalar gistogrammasi (nisbiy chastotalar gistogrammasi) deb, asoslari h uzunlikdagi intervallardan va balandligi n_i/n , (w_i/n) sonlardan iborat bo'lgan to'g'ri to'rtburchakdan tuzilgan pog'onasimon figuraga aytildi (2-shakl).

2-shakl.

$h = \frac{x_{\max} - x_{\min}}{1 + 3,221 \lg n}$ – interval uzunligini aniqlash uchun Sterdjess formulasi.

$m = 1 + 3,3221 \lg n$ – intervallar soni.

$x_0 = x_{\min} - h/2$ – birinchi intervalning boshini aniqlash formulasi.

Agar hajmi n ga teng bo'lgan tanlanmaning son qiymatlari x_1, x_2, \dots, x_k bo'lib, ular har xil bo'lsalar, u holda **tanlanma o'rta qiymat** quyidagicha topiladi:

$$\overline{x}_T = \frac{x_1 + x_2 + \dots + x_k}{n}. \quad (91)$$

Agar hajmi n ga teng bo'lgan tanlanmaning son qiymatlari x_1, x_2, \dots, x_k mos ravishda n_1, n_2, \dots, n_k chastotalar bilan olingan bo'lsa,

$$\overline{x}_T = \frac{x_1 n_1 + x_2 n_2 + \dots + x_k n_k}{n} \text{ yoki } \overline{x}_T = \frac{\sum_{i=1}^k x_i n_i}{n}$$

tenglik yordamida aniqlanadi. Bunda: $n_1 + n_2 + \dots + n_k = n$.

Agar hajmi n ga teng bo'lgan tanlanmaning son qiymatlari x_1, x_2, \dots, x_k mos ravishda n_1, n_2, \dots, n_k chastotalar bilan olingan bo'lsa, u holda **tanlanma dispersiya** sifatida, quyidagi kattalik olinadi:

$$D_r = \frac{\sum_{i=1}^k (x_i - \bar{X})^2 n_i}{n} = \frac{1}{n} \sum_{i=1}^k x_i^2 n_i - (\bar{X})^2 = \bar{X}^2 - (\bar{X})^2. \quad (92)$$

Tanlanmaning o'rtacha kvadratik chetlanishi quyidagi formula bilan topiladi:

$$\bar{\sigma} = \sqrt{D}. \quad (93)$$

Tanlanmaning kengligi quyidagi formula bilan topiladi:

$$R = x_{\max} - x_{\min}.$$

M_0^* – tanlanma moda deb, eng katta chastotaga ega bo'lgan variantaga aytildi.

Tanlanmaning medianasi quyidagi formula bilan topiladi:

$$M_c^* = \begin{cases} \frac{x_i + x_{i+1}}{2}, & i = \frac{k}{2}, k = 2m, \\ x_i, & i = \frac{k+1}{2}, k = 2m+1. \end{cases} \quad (94)$$

1309. 10 ta talabidan iborat guruhda oliy matematikadan o'tkazilgan oraliq nazoratda quyidagi ballar to'plangan: 2,5,4,0,2,5,0,4,2,1. Tanlanmaning chastotalar va nisbiy chastotalar statistik taqsimotlarini toping, empirik taqsimot funksiyasini tuzing.

Yechish. Tanlanmaning variatsion qator ko'rinishda yozib olamiz:

0,0,1,2,2,2,4,4,5,5 chastota va nisbiy chastotalarni ($w_i = n_i / n$) topamiz.

Bu yerda

$$\sum_{i=1}^5 n_i = 2 + 1 + 3 + 2 + 2 = 10, \quad \sum_{i=1}^5 w_i = 0,2 + 0,1 + 0,3 + 0,2 + 0,2 = 1.$$

Chastota va nisbiy chastotalar qatorini tuzamiz:

x _i	0	1	2	4	5
n _i	2	1	3	2	2
w _i	0,2	0,1	0,3	0,2	0,2

Bu qatorlar asosida empirik taqsimot funksiyasini tuzamiz:

1. $x_1 = 0$, eng kichik varianta.

Demak, $x \leq 0$ da $F^*(x) = 0$;

2. $x < 1$, da $x_1 = 0$ va $w_1 = 0,2$.

Demak, $0 < x \leq 1$ da $F^*(x) = 0,2$;

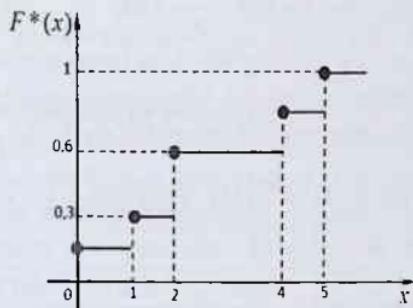

3. $1 < x \leq 2$ da $F^*(x) = 0,2 + 0,1 = 0,3$;

4. $2 < x \leq 4$ da $F^*(x) = 0,3 + 0,3 = 0,6$;

5. $4 < x \leq 5$ da $F^*(x) = 0,6 + 0,2 = 0,8$;

6. $x = 5$ eng katta varianta bo'lgani uchun

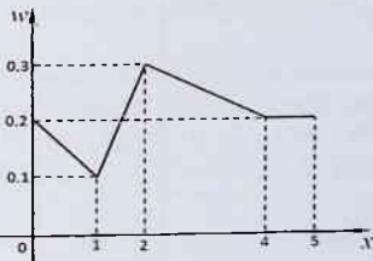

$x > 5$ da $F^*(x) = 1$.

3-shakl.

Demak,

$$F^*(x) = \begin{cases} 0, & x \leq 0, \\ 0,2, & 0 < x \leq 1, \\ 0,3, & 1 < x \leq 2, \\ 0,6, & 2 < x \leq 4, \\ 0,8, & 4 < x \leq 5, \\ 1, & x > 5. \end{cases}$$

4-shakl.

1310. Tavakkaliga tanlangan 20 ta talabaning bo‘yi (sm. aniqligida) o‘lchangan va quyidagi natijalar olingan: 171, 160, 163, 162, 156, 159, 176, 172, 164, 158, 162, 166, 162, 167, 171, 157, 167, 158, 169, 174.

Intervalli statistik qatorni tuzing.

Yechish. Olingan natijalarni o‘sish tartibida joylashtiramiz:

156, 157, 158, 158, 159, 160, 162, 162, 162, 163,
164, 166, 167, 167, 169, 171, 171, 172, 174, 176.

Bundan

$$x_{\min} = 156, \quad x_{\max} = 176.$$

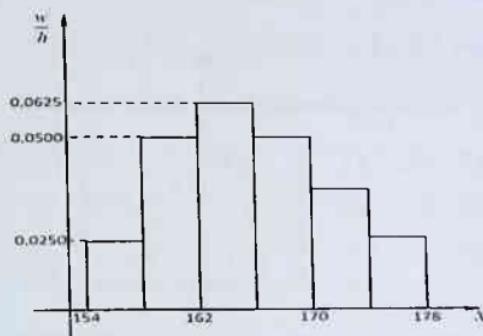

Sterdjess formulasiga asosan $h = \frac{176 - 156}{1 + 3,322 \lg 20} \approx 4$.

U holda $x_0 = x_{\min} - h/2 = 156 - \frac{4}{2} = 154$.

Berilganlarni $m = 1 + 3,322 \lg 20 \approx 6$ ta intervalga ajratamiz:

Har bir intervalga tushuvchi talabalar sonini (chastotalarni), nisbiy chastotalarni aniqlaymiz va intervalli statistik qatorni tuzamiz

x_i	[154;158)	[158;162)	[162;166)	[166;170)	[170;174)	[174;178)
n_i	2	4	5	4	3	2
w_i	0,1	0,2	0,25	0,2	0,15	0,1
w_i/h	0,025	0,05	0,0625	0,05	0,0375	0,025

5-shakl.

1311. Texnomart magazinida kompyuterni 10 kunlik sotishdan quyidagi natijalar olindi: 1, 2, 4, 0, 2, 5, 0, 4, 2, 5. Tanlanmaning sonli xarakteristikalarini toping.

Yechish. Olingen natijalarni o'sish tartibida joylashtirib variatsion qator tuzamiz : 0, 0, 1, 2, 2, 2, 4, 4, 5, 5

x_i	0	1	2	4	5
n_i	2	1	3	2	2

(91)-(93) formulalar yordamida sonli xarakteristikalarini topamiz:

$$\bar{X} = \frac{1}{10}(0 \cdot 2 + 1 \cdot 1 + 2 \cdot 3 + 4 \cdot 2 + 5 \cdot 2) = 2,5;$$

$$\bar{D} = \frac{1}{10}(0 \cdot 2 + 1 \cdot 1 + 2^2 \cdot 3 + 4^2 \cdot 2 + 5^2 \cdot 2) - 2,5^2 = 3,25;$$

$$\bar{\sigma} = \sqrt{3,25} \approx 1,8; \quad R = 5 - 0 = 5; \quad M_0' = 2; \quad M_e' = 2$$

Quyidagi masalalarni yeching

1312. Supermarketda sovitgichlarni 10 kunlik sotishdan quyidagi natijalar olindi: 2, 3, 2, 1, 0, 2, 4, 3, 0, 1. Tanlanmaning: 1) nisbiy chastotalar statistik taqsimotini toping; 2) empirik taqsimot funksiyasini tuzing va grafigini chizing; 3) nisbiy chastotalar poligonini chizing.

1313. Supermarketda televizorlarni 10 kunlik sotishdan quyidagi natijalar olindi: 1, 1, 2, 2, 3, 5, 2, 5, 1, 0. Tanlanmaning: 1) nisbiy chastotalar statistik taqsimotini toping; 2) empirik taqsimot funksiyasini tuzing va grafigini chizing; 3) nisbiy chastotalar poligonini chizing.

1314. Yuk tashish bilan shug'ullanadigan korxonaning haftalik tashilgan yuklar hajmi (tonna) kuzatilganda quyidagi natijalar olingen: 157, 160, 170, 183, 159, 153, 182, 186, 171, 155, 178, 179, 175, 165, 154, 156, 166, 179, 155, 158, 173, 171, 167, 175, 167, 173, 163, 164, 169, 172.

Tanlanmaning intervalli statistik qatorini tuzing va nisbiy chastotalar histogrammasini chizing.

1315. Fermer xo'jaligi a'zolarining bir kunlik tergan paxtasi kuzatilganda quyidagi natijalar (kilogramm) olingen: 183, 166, 179.

155, 169, 172, 178, 157, 179, 163, 171, 164, 160, 175, 165, 155, 159, 158, 154, 170, 165, 186, 167, 173, 153, 182, 171, 173, 167, 175.

Tanlanmaning intervalli statistik qatorini tuzing va nisbiy chastotalar histogrammasini chizing.

1316. 10 ta abituriyentdan iborat guruhda matematikadan test nazorati o'tkazilgan. Bunda har bir abituriyent 5 balldan to'plashi mumkin. Nazoratda quyidagi natijalar olindi: 1) 1-guruh uchun; 4, 4, 5, 3, 3, 1, 5, 5, 2, 5;

2) 2-guruh uchun: 3, 4, 5, 0, 1, 2, 3, 4, 5, 4. Har bir guruh uchun tanlanmaning sonli xarakteristikalarini toping.

1317. Ulgurji savdoni tashkil qilishda erkaklar payabzalining o'rtacha o'lchamini bilish maqsadida tajriba o'tkazilgan. Bunda do'kondan ma'lum vaqtda xaridorlar tomonidan sotib olingan erkaklar payabzalining o'lchami kuzatilgan va natijada quyidagi tanlanma olingan:

39,43,42,40,44,39,42,41,41,40,42,41,42,45,43,44,40,43,41,42, 41,43,38,41,42,40,43,40,44,41,43,41,39,45,43,46,42,43,42,40, 43,42,41,43,39,44,40,43,41,42,41,43,42,45,44,42,41,42,40,44.

Tanlanma o'rta qiymat va tanlanma dispersiyani toping.

1318. Elektr zanjiridagi kuchlanish tasodifiy xarakterga ega bo'lgan kuchlanishning ulanishiga bog'liq. Zanjirdagi kuchlanishning tebranishini o'rganish uchun ma'lum vaqt oralig'ida voltning o'ndan bir bo'lagi aniqligida 30 ta o'lhash o'tkazilgan va quyidagi variatsiya qatori olingan:

215.0, 215.5, 215.9, 216.4, 216.8, 217.3, 217.5, 218.1, 218.6, 218.9, 219.2, 219.4, 219.7, 219.8, 220.0, 220.2, 220.3, 220.5, 220.7, 220.9, 221.3, 221.6, 221.9, 222.3, 222.6, 222.9, 223.4, 224.0, 224.5, 225.0.

Tanlanma o'rta qiymat va tanlanma dispersiyani toping.

1319. Hajmi 20 ga teng tanlanmaning statistik taqsimoti berilgan:

x_i	2560	2600	2620	2650	2700
w_i	2	3	10	4	1

Tanlanma o'rta qiymat va tanlanma dispersiyani toping.

1320. Hajmi 100 ga teng tanlanmaning statistik taqsimoti berilgan:

x_i	156	160	164	168	172	176	180
w_i	10	14	26	28	12	8	2

Tanlanma o'rta qiymat va tanlanma dispersiyani toping.

80-§. Taqsimot noma'lum parametrlarining statistik baholari

Izlanayotgan θ parametrning taqrifiy, tasodifiy qiymatini o'z ichiga olgan bahoni **statistik baho** deyiladi va u quyidagi ko'rinishda belgilanadi:

$$\theta = \theta(X_1, X_2, \dots, X_n) \quad (95)$$

Agar $M(\theta) = \theta$ bo'lsa, θ bahoga θ parametr uchun **siljimagan baho** deyiladi.

Agar $\lim_{n \rightarrow \infty} M(\theta) = \theta$ bo'lsa, θ bahoga θ parametr uchun **asimptotik siljimagan baho** deyiladi.

Agar $M(\theta) \neq \theta$ bo'lsa, θ bahoga θ parametr uchun **siljigan baho** deyiladi.

Agar $\lim_{n \rightarrow \infty} P(|\theta - \theta| < \varepsilon) = 1$ bo'lsa, θ bahoga θ parametr uchun **asosli baho** deyiladi.

θ parametr θ siljimagan bahosi bu parametrning mumkin bo'lgan baholari orasida eng kichik dispersiyaga ega bo'lsa, θ bahoga θ parametr uchun **samarali baho** deyiladi va θ^* ko'rinishda belgilanadi.

Bahoning samaradorligi

$$e\theta = \frac{D(\theta^*)}{D(\theta)} \quad (96)$$

kattalik bilan baholanadi, bu erda θ^* samarali baho.

Agar $\lim_{n \rightarrow \infty} \theta = \theta$ bo'lsa, θ bahoga θ parametr uchun **asimptotik samarali baho** deyiladi.

X tasodifiy miqdorning matematik kutilmasi $M(X) = a$ va dispersiyasi $D(X)$ bo'lsin. X_1, X_2, \dots, X_n , lar uchun tanlamaning o'rta qiymati \bar{X} , $M(X)$ ning siljimagan bahosi bo'ladi. U holda

$$\lim_{n \rightarrow \infty} P(|\bar{X} - M(X)| < \varepsilon) = 1 \Rightarrow \lim_{n \rightarrow \infty} P(|\theta - \theta| < \varepsilon) = 1.$$

$D(X)$ dispersiya uchun, tuzatilgan tanlama dispersiya, siljimagan va asosli baho bo'ladi:

$$S^2 = \frac{n-1}{n} \cdot \bar{D}. \quad (97)$$

Matematik kutilishi a ga dispersiyasi σ^2 ga teng bo'lgan normal taqsimot qonuniga bo'ysunuvchi tasodifiy miqdor uchun

$$P(\alpha < X < \beta) = \Phi\left(\sqrt{n} \frac{\beta - a}{\sigma}\right) - \Phi\left(\sqrt{n} \frac{\alpha - a}{\sigma}\right) \Rightarrow P(|\bar{X} - a| < \varepsilon) = 2\Phi\left(\frac{\varepsilon\sqrt{n}}{\sigma}\right). \quad (98)$$

x_1, x_2, \dots, x_n tanlama asosida tuzilgan

$$L(x_1, x_2, \dots, x_n, \theta) = f(x_1, \theta) \cdot f(x_2, \theta) \cdot \dots \cdot f(x_n, \theta)$$

yoki

$$L(x_1, x_2, \dots, x_n, \theta) = \prod_{i=1}^n f(x_i, \theta) \quad (99)$$

ishonchlilik funksiyasi.

Agar $P(\theta_1 < \theta < \theta_2) = \gamma$ tenglik bajarilsa $(\theta_1; \theta_2)$ intervalga θ parametning ishonchlilik intervali deyiladi.

(98) formulada $t = \frac{\varepsilon\sigma}{\sqrt{n}} \Rightarrow \varepsilon = \frac{t\sigma}{\sqrt{n}}$ almashtirish bajarsak:

$$P\left(|\bar{X} - a| < \frac{t\sigma}{\sqrt{n}}\right) = 2\Phi(t) \Rightarrow P\left(\bar{X} - \frac{t\sigma}{\sqrt{n}} < a < \bar{X} + \frac{t\sigma}{\sqrt{n}}\right) = 2\Phi(t) = \gamma.$$

$$\Phi(t) = \frac{\gamma}{2} \quad (100)$$

$\left(\bar{X} - \frac{t\sigma}{\sqrt{n}} < a < \bar{X} + \frac{t\sigma}{\sqrt{n}}\right)$ - ishonchlilik intervali.

$\varepsilon = \frac{t\sigma}{\sqrt{n}}$ - kattalik bahoning aniqligi deb ataladi.

Eng kichik kvadratlar usulida, bahoning minimallashgan qiymati quyidagi formula orqali topiladi:

$$F(\theta) = \sum_{i=1}^n (X_i - \theta)^2. \quad (101)$$

Styudent taqsimotli T tasodifiy miqdorning $T = \sqrt{n} \frac{\bar{X} - a}{S}$ formulaga asosan

$$P(|T| < t_\gamma) = P\left(\left|\sqrt{n} \frac{\bar{X} - a}{S}\right| < t_\gamma\right) = \gamma \Rightarrow P\left(\bar{X} - \frac{t_\gamma S}{\sqrt{n}} < a < \bar{X} + \frac{t_\gamma S}{\sqrt{n}}\right) = \gamma.$$

Sunday qilib,

$$\left(\bar{X} - \frac{t_\gamma S}{\sqrt{n}}, \bar{X} + \frac{t_\gamma S}{\sqrt{n}}\right) \quad (102)$$

(102) a parametr uchun γ -ishonchliklilik intervali. $\varepsilon = \frac{t_\gamma S}{\sqrt{n}}$ - bahoning aniqligi.

1321. Hajmi 50 ga teng bo‘lgan tanlamaning statistik taqsimoti berilgan:

x_i	3	5	8	11
w_i	14	10	12	14

Bosh o‘rtacha qiymatning siljimagan bahosini toping.

Yechish. Bosh o‘rtacha qiymatning siljimagan bahosi tanlanma o‘rtacha qiymat bo‘ladi. Uni hisoblaymiz:

$$\bar{X} = \frac{1}{50} (3 \cdot 14 + 5 \cdot 10 + 8 \cdot 12 + 11 \cdot 14) = 6,84.$$

1322. Hajmi 51 ga teng bo‘lgan tanlanma bo‘yicha dispersiyaning siljigan bahosi topilgan: $\bar{D} = 7$. Bosh to‘plam dispersiyasining siljimagan bahosini toping.

Yechish. Bosh to‘plam dispersiyasining siljimagan bahosi tuzatilgan dispersiya bo‘ladi:

$$S^2 = \frac{n}{n-1} \bar{D} = \frac{51}{50} \cdot 7 = 7,14.$$

1323. Shaftoli sharbatni 200 ml hajmli qog‘oz karton qutiga quyiladi. Quyuvchi avtomat shunday sozlanganki, uni to‘ldirish xatoligi $\sigma \pm 10 \text{ml}$ ga teng. Avtomatni 205 ml quyadigan qilib

sozlandi. Idishlar karton qutilarga 25 tadan qadoqlanadi. Tasodifan tanlangan qadoqlangan qutining og'irlikka tekshiruvdan o'tmasligi ehtimolini toping.

Yechish. Idishlarga o'rtacha to'ldirilish 205 ml., o'rtacha kvadratik og'ish 10 ml. Tasodifiy tanlanma sharbat bilan to'ldirilgan 25 ta idishlardan iborat. $p=25$ hajmli mumkin bo'lган barcha tanlanmalar uchun o'rtacha og'irlilikning taqsimoti normal taqsimotga bo'yusunadi. Bunda idishning ortiqcha to'ldirilishi 205 ml. ga, o'rtacha kvadratik og'ish

$$\frac{\sigma}{\sqrt{n}} = \frac{10}{\sqrt{25}} = 2 \text{ ml}$$

ga teng bo'ladi.

Agar qadoqlangan qutidagi idishlarning o'rtacha to'ldirilgani ligi 200 ml dan kam bo'lsa, quti sifat nazoratidan o'tmaydi. (xaridor talabiga javob bermaydi).

Demak,

$$\begin{aligned} P(\bar{X} < 200) &= P(0 < \bar{X} < 200) = \Phi\left(\frac{200 - 205}{2}\right) - \Phi\left(\frac{0 - 205}{2}\right) = \\ &= \Phi(-2,5) - \Phi(-102,5) = -0,4938 - (-0,5) = 0,0062. \end{aligned}$$

1324. Ko'rsatkichli taqsimotga ega X tasodifiy miqdor a parametrini bahosini maksimal ishonchlilik usuli bilan toping.

Yechish. Ko'rsatkichli taqsimotga ega X tasodifiy miqdor

$$f(x, a) = ae^{-ax}, x > 0.$$

Uning ishonchlilik funksiyasini tuzamiz:

$$L(x, \theta) = \prod_{i=1}^n \theta e^{-\theta x_i} = \theta^n e^{-\theta \sum_{i=1}^n x_i}.$$

Bu funksiyani logarifmlaymiz:

$$\ln[L(x, \theta)] = \ln \theta^n e^{-\theta \sum_{i=1}^n x_i} = n \ln \theta - \theta \sum_{i=1}^n x_i.$$

Ishonchlilik tenglamasini tuzamiz:

$$\frac{d \ln[L(x, \theta)]}{d \theta} = \left(\frac{n}{\theta} - \sum_{i=1}^n x_i \right) \Big|_{\theta=\hat{\theta}} = 0.$$

Bundan

$$\bar{\theta} = \frac{n}{\sum_{i=1}^n X_i} = \frac{n}{\bar{X}}. \quad \frac{d^2 \ln[L(x, \theta)]}{d\theta^2} = \left(-\frac{n}{\theta^2} \right) \Big|_{\theta=\bar{\theta}} = -\frac{n}{\bar{\theta}^2} < 0$$

bo'lgani uchun $\bar{\theta} = \frac{n}{\bar{X}}$ baho $\theta = \alpha$ parametrning bahosi bo'ladi.

1325. Puasson taqsimotiga ega X tasodifiy miqdorning λ parametri bahosini eng kichik kvadratlar usuli bilan toping.

Yechish. (101) formuladan $F(\theta) = \sum_{i=1}^n (X_i - \theta)^2$ funksiyani minimumga tekshiramiz:

$$F'(\theta) = \left(\sum_{i=1}^n (X_i - \theta)^2 \right)' \Bigg|_{\theta=\bar{\theta}} = 2 \sum_{i=1}^n (X_i - \theta)(-1) = 0.$$

Bundan

$$\sum_{i=1}^n X_i - n\theta = 0 \Rightarrow \theta = \frac{1}{n} \sum_{i=1}^n X_i = \bar{X}.$$

$$F'(\theta) = \left(-2 \sum_{i=1}^n \theta \right)' \Bigg|_{\theta=\bar{\theta}} = -2 \sum_{i=1}^n (-1) = 2n > 0, \quad \text{bo'lgani uchun } \theta = \bar{X} \text{ baho}$$

$\theta = \lambda$ parametrning bahosi bo'ladi.

1326. Tanlama $\sigma = 20$ parametr bilan normal taqsimlangan. X tasodifiy miqdor ustida 5 ta kuzatish o'tkazilgan va $x_1 = -25$, $x_2 = 34$, $x_3 = -20$, $x_4 = 10$, $x_5 = 21$ natijaga erishilgan. $\gamma = 0,95$ ishonchlilik bilan a parametr uchun ishonchlilik intervalini toping.

Yechish. \bar{X} ni topamiz:

$$\bar{X} = \frac{1}{5}(-25 + 34 - 20 + 10 + 21) = 4.$$

(100) formuladan $\Phi(t) = \frac{\gamma}{2} = \frac{0,95}{2} = 0,475$ ifoda uchun 2-jadvaldan topamiz: $t = 1,96$. U holda

$$\varepsilon = \frac{t\sigma}{\sqrt{n}} = \frac{1,96 \cdot 20}{\sqrt{5}} = 17,5.$$

a parametr uchun ishonchlilik intervalini aniqlaymiz:

$$(4 - 17,5; 4 + 17,5) \text{ yoki } (-13,5; 21,5).$$

1327. Biror kattalik bitta asbob yordamida sistematik xatolasi l chiqqan. Asbob aniqligini 0,95 ishonchlilik bilan toping.

Yechish. Illovadagi jadvaldan $n=10$ va $\gamma=0,95$ ga mos q ning qiymatini topamiz:

$$q = q(10; 0,95) = 0,65.$$

U holda

$$0,6(1-0,65) < \sigma < 0,6(1+0,65) \Rightarrow 0,21 < \sigma < 0,99.$$

Quyidagi masalalarni yeching

1328. Hajmi 70 ga teng bo'lgan tanlanmaning statistik taqsimoti berilgan:

x_i	1	4	9	20
w_i	16	20	22	12

x_i	-2	6	10	18
w_i	22	15	23	10

Bosh o'rtacha qiymatni siljimagan bahosini toping.

1329. Hajmi 60 ga teng bo'lgan tanlanma bo'yicha dispersiyaning siljigan bahosi topilgan; 1) 1) $\bar{D}=8,26$; 2) $\bar{D}=7,67$. Bosh to'plam dispersiyasining siljimagan bahosini toping.

1330. Bosh to'plamning o'rtachasi $X=1,03$ ga va o'rtacha kvadratik chetlanishi $\sigma=400$ ga teng. Bosh to'plamdan hajmi 100 ga teng bo'lgan tanlanma olingan. Tanlamaning o'rtachasi \bar{X} uchun kutilayotgan qiymatni va o'rtacha kvadratik chetlanishni toping.

1331. Bosh to'plamning o'rtachasi $X=22,5$ ga va o'rtacha kvadratik chetlanishi $\sigma=16$ ga teng. Bosh to'plamdan hajmi 200 ga teng bo'lgan tanlama olingan, Tanlamaning o'rtachasi \bar{X} uchun kutilayotgan qiymatni va o'rtacha kvadratik chetlanishni toping.

1332. Supermarketga kirgan xaridorning magazinda bo'lish vaqtiga o'rta hisobda 14 daqiqaga, uning o'rtacha kvadratik chetlanishi 4 daqiqaga teng. Tavakkaliga tanlangan 6 ta xaridorning kamida 12 daqiqaga magazinda bo'lish ehtimolini toping.

1333. Do'konda bir kunda o'rtacha 1000 ta kitob sotiladi. Bir kunlik o'rtacha savdo hajmining o'rtacha kvadratik chetlanishi 100 ga teng bo'lsa, to'rt kunlik savdoni o'rtacha 900 va 1100 dona kitob orasida bo'lishi ehtimolini toping.

1334. Bernulli sxemasidagi noma'lum natija ehtimolini momentlar usuli bilan toping.

1335. Tekis taqsimotga ega X -tasodisiy miqdor a va b parametrлarning bahosini momentlar usuli bilan toping.

1336. Puasson taqsimotiga ega X -tasodifiy miqdor λ parametrlerning bahosini maksimal ishonchlilik usuli bilan toping.

1337. Tanga 10 marta tashlanganda 6 marta gerb tomon tushdi. Gerb tomon tushishi ehtimolini maksimum ishonchlilik usuli bilan baholang.

1338. Bosh to'plamning normal taqsimlangan X -tasodifiy miqdor noma'lum matematik kutilishi σ ni 0,99 ishonchlilik bilan baholash uchun berilgan: σ , \bar{X} , n ma'lum bo'lsa, ishonchlilik intervalini toping.

$$1) \sigma = 5, \bar{X} = 16,3, n = 25; \quad 2) \sigma = 4, \bar{X} = 12,4, n = 16;$$

$$3) \sigma = 3, \bar{X} = 10,1, n = 9; \quad 4) \sigma = 6, \bar{X} = 14,5, n = 36;$$

1339. Audit tekshiruvchi tavakkaliga 50 ta to'lov hisoblarini tahlil qilib, ularning o'rtacha miqdori 1100 so'mga va o'rtacha kvadratik chetlanishi 287 so'mga tengligini aniqladi. O'rtacha to'lov hisoblari uchun 90% li ishonchlilik intervalini toping.

1340. Normal taqsimlangan bosh to'plamning o'rtacha kvadratik chetlanishi $\sigma = 3$ ga teng. Bosh to'plamning tanlama o'rta qiymat bo'yicha matematik kutilmasi bahosining aniqligi $\varepsilon = 0,2$ bo'lsa, tanlamaning minimal hajmini 0,95 ishonchlilik bilan aniqlang.

1341. Normal taqsimlangan bosh to'plamning o'rtacha kvadratik chetlanishi $\sigma = 5$ ga teng. Bosh to'plamning tanlanma o'rta qiymat bo'yicha matematik kutilmasi bahosining aniqligi $\varepsilon = 0,4$ dan katta bo'lmasa, tanlanmaning minimal hajmini 0,9 ishonchlilik bilan aniqlang.

1342. Bosh to'plamdan $n = 16$ hajmli tanlama olingan:

x_i	-2	2	4	6
w_i	5	4	4	3

x_i	-1	1	3	5
w_i	6	2	2	6

Bosh to'plamning normal taqsimlangan X -tasodifiy miqdor noma'lum matematik kutilmasini o'rtacha qiymatni 0,95 ishonchlilik bilan ishonchli interval yordamida baholang.

1343. Biror fizik kattalikni bir xil aniqlikda 16 marta o'lchash natijalarini o'rtacha arismetik qiymati $\bar{X} = 42,8$ va tuzatilgan o'rtacha

kvadratik chetlanishi $s=8$ topilgan. O'lchanayotgan kattalikning haqiqiy qiymatini 0,999 ishonchlilik bilan baholang.

1344. Bir xil aniqlikdagi 15 ta o'lhash bo'yicha o'rtacha kvadratik chetlanishi aniqlangan:

1) $S=0,12$; 2) $S=0,16$; 3) $S=0,24$; 4) $S=0,19$. O'lhash aniqligini 0,99 ishonchlilik bilan toping.

1345. Biror fizik kattalikni bitta asbob bilan (sistematik xatolarsiz) 8 marta o'lchangan. Bunda o'lhash tasodifiy xatoligining o'rtacha kvadratik chetlanishi $s=0,25$ bo'lib chiqdi. Asbobning aniqligini 0,99 ishonchlilik bilan aniqlang.

81-§. Statistik gipoteza va ularni tekshirish. Styudent taqsimoti

No'malum taqsimot qonuning ko'rinishi yoki parametri haqidagi har qanday taxminga **statistik gipoteza** deyiladi.

Gipotezalar ikki turli bo'ladi: Birinchi turli gipotezalar **parametrik gipotezalar**. Ikkinci turdag'i gipotezalar **noparametrik gipotezalar** deyiladi.

Kuzatish taqsimotini bir qiymatli belgilovchi gipotezaga **oddiy gipoteza**, aks holda **murakkab gipoteza** deyiladi.

Tekshirilayotgan gipoteza **nolinchi (asosli)** gipoteza deb ataladi va H_0 bilan belgilanadi. Unga zid bolgan gipotezaga **raqobatli-muqobil (konkurent – alternative)** gipoteza deyiladi va H_1 bilan belgilanadi.

Agar k ta o'zaro bog'liq normallangan X tasodifiy miqdorlar normal taqsimotga ega bo'lsa, u holda ularning kvadrlatlari yig'indisining

$$\chi^2 = \sum_{i=1}^k X_i^2 \quad (103)$$

taqsimotiga erkinlik darajasi k bo'lgan χ^2 taqsimot deyiladi. Bu taqsimotning zichligi

$$P_k(x) = \begin{cases} 0, & x \leq 0, \\ \frac{1}{2^{k/2} \Gamma(k/2)} e^{-\frac{x}{2}} x^{\frac{k}{2}-1}, & x > 0. \end{cases} \quad (104)$$

ko'rinishda bo'ladi, bu yerda $\Gamma(x) = \int_0^{\infty} t^{x-1} e^{-t} dt$ gamma funksiya.

χ^2 taqsimot uchun

$$M\chi^2 = k, D\chi^2 = 2k. \quad (105)$$

χ^2 taqsimot uchun $k \leq 30$ qiymati jadvaldan topiladi. $k > 30$ bo'gandagi qiymatlari esa normal taqsimot bilan almashtiriladi.

$$T = \frac{X}{\sqrt{Y/k}} \quad (106)$$

k erkinlik darajali **Styudent taqsimoti**. Bu yerda X -normal taqsimlangan tasodifiy miqdor, Y -erkinlik darajasi k bo'lgan χ^2 taqsimotga ega tasodifiy miqdor. Bu taqsimotning zichligi quyidagi ko'rinishda bo'ladi:

$$P_k(x) = \frac{\Gamma\left(k + \frac{1}{2}\right)}{\sqrt{k\pi}\left(\frac{k}{2}\right)} \left(1 + \frac{x^2}{2}\right)^{\frac{k+1}{2}} \quad (107)$$

$$t - \text{taqsimotning } MT = 0, DT = \frac{k}{k-2}. \quad (108)$$

$$F = \frac{\frac{X}{k_1}}{\frac{Y}{k_2}} \quad (109)$$

k_1, k_2 erkinlik darajali **Fisher taqsimoti**. Bu yerda X, Y - bog'liqmas tasodifiy miqdor, erkinlik darajasi k_1, k_2 bo'lgan χ^2 taqsimotga ega tasodifiy miqdor. Bu taqsimotning zichligi quyidagi ko'rinishda bo'ladi:

$$P_{k_1, k_2}(x) = \begin{cases} 0, & x \leq 0, \\ C_0 \frac{x^{(k_1-2)/2}}{(k_1 x + k_2)^{(k_1+k_2)/2}}, & x > 0, \end{cases} \quad C_0 = \frac{\Gamma\left(\frac{k_1+k_2}{2}\right) k_1^{\frac{k_1}{2}} k_2^{\frac{k_2}{2}}}{\Gamma\left(\frac{k_1}{2}\right) \Gamma\left(\frac{k_2}{2}\right)}. \quad (110)$$

F - taqsimotning

$$MF = \frac{k_2}{k_2 - 2}, (k_2 > 2), \quad DF = \frac{2k_2^2(k_1 + k_2 - 2)}{k_1(k_2 - 2)^2(k_2 - 4)}, (k_2 > 4). \quad (111)$$

X tasodifiy miqdorlar normal taqsimotga ega bo'lib, σ parametr ma'lum bo'lsin. U holda statistik mezon sifatida

$$Z = \sqrt{n} \frac{\bar{X} - a_0}{\sigma}, \quad (112)$$

bu yerda H_0 gipoteza uchun

$$M(\bar{X}) = a_0, \quad D(\bar{X}) = \frac{\sigma^2}{n}. \quad (113)$$

Kritik nuqta

$$\Phi_0(Z_b) = \frac{1 - 2\alpha}{2} \quad (114)$$

formula bilan aniqlanadi va uning qiymati Laplas funksiyasi jadvalidan topiladi, α qiymatllik darajasi.

X -tasodifiy miqdorlar normal taqsimotga ega bo'lib, σ parametr noma'lum bo'lsin. U holda statistik mezon Styudent taqsimoti yordamida quyidagi ko'rinishda bo'ladi:

$$T = \sqrt{n-1} \frac{\bar{X} - a_0}{S} \quad (115)$$

bu yerda, \bar{X} tanlanmaning o'rta qiymati, S^2 -tuzatilgan tanlama dispersiya.

X tasodifiy miqdorlar normal taqsimotga ega bo'lib, $\sigma = \sigma_0$ parametr bo'lsin. U holda statistik mezon ko'rinishda bo'ladi:

$$\chi^2 = \frac{(n-1)S^2}{\sigma_0^2}, \quad (116)$$

bu yerda, S^2 -tanlanmaning tuzatilgan dispersiyasi.

$$H_0: \sigma^2 = \sigma_0^2 \text{ bo'lsin,}$$

1) $H_1: \sigma^2 > \sigma_0^2$ bo'lsa, α - qiymatllik darajasi

$$\alpha = P_{H_0}(\chi^2 \in S_1) = P_{H_0}(\chi^2 > \chi_{kr}^2)$$

tenglama asosida berilgan $k = n-1$ va $\alpha - 1$ bo'yicha χ^2 taqsimotning kritik nuqtalari jadvalidan topiladi.

2) $H_1: \sigma^2 < \sigma_0^2$ bo'lsa, α - qiymatllik darajasi quyidagicha topiladi:

$$\alpha = P_{H_0}(\chi^2 \in S_2) = P_{H_0}(\chi^2 < \chi_{kr}^2) = 1 - P_{H_0}(\chi^2 > \chi_{kr}^2), \text{ yoki } P_{H_0}(\chi^2 < \chi_{kr}^2) = 1 - \alpha.$$

tenglama asosida berilgan $k = n-1$ va $\alpha - 1$ bo'yicha χ^2 taqsimotning kritik nuqtalari 6-jadvaldan topiladi.

3) $H_1: \sigma^2 \neq \sigma_0^2$ bo'lsa, α - qiymatlilik darajasi quyidagicha topiladi:

$$\frac{\alpha}{2} = P_{H_0}(\chi^2 \in S_1^*) = P_{H_0}(\chi^2 \in S_2^*)$$

yoki

$$\frac{\alpha}{2} = P_{H_0}(\chi^2 \in S'_2) = P_{H_0}(\chi^2 < \chi^2_{1-\alpha}) \Rightarrow P_{H_0}(\chi^2 < \chi^2_{1-\alpha}) = 1 - \frac{\alpha}{2}.$$

Bosh to'plam haqidagi statistik gipotezalarni tekshirish.

Muvofiqlik kriteriysi deb taqsimot funksiyasining umumiy ko'rinishi haqidagi gipotezani qabul qilish yoki rad etishga imkon beradigan kriteriya aytildi.

Pirson kriteriysi. X tasodifiy miqdor ustida n ta o'zaro bog'liq bo'lmagan kuzatishlar natijasi, quyidagicha bo'lsin:

x_i	x_1	x_2	***	x_m
n_i	n_1	n_2	***	n_m

Bu yerda n_i empirik kuzatishlar chastotasi.

1) Taqsimot diskret bo'lganda: $p_i = P(X = x_i)$ - ehtimollik va $n_i^* = np_i$ - nisbiy chastota, $n = \sum_{i=1}^m n_i$ - tanlama hajmi.

2) Taqsimot uzlusiz bo'lganda: $p_j = P_{H_0}(x_j < X < x_{j+1})$ - ehtimollik va $n_j^* = np_j$ - nisbiy chastota, $n = \sum_{j=1}^m n_j$ - tanlama hajmi.

U holda statistik mezon sifatida

$$\chi^2 = \sum_{j=1}^m \frac{(n_j - n_j^*)^2}{n_j^*} \quad (117)$$

yig'indi olinadi. α - qiymatlilik darajasi quyidagicha topiladi:

$$\alpha = P_{H_0}(\chi^2 \in S_2) = P_{H_0}(\chi^2 > \chi^2_{\alpha}).$$

Kolmogorov kriteriysi. X tasodifiy miqdor ustida n ta o'zaro bog'liq bo'lmagan X_1, X_2, \dots, X_n , $F_n(x)$ -emperik taqsimot funksiyasi berilgan bo'lsin.

Statistik mezon sifatida, quyidagi ifodani olamiz:

$$D_n = \max |F(x) - F_n(x)|. \quad (118)$$

Teorema (Kolmogorov teoremasi). Istalgan uzlusiz $F(x)$ -funksiya uchun

$$\lim_{n \rightarrow \infty} P\left(D_n < \frac{\lambda}{\sqrt{n}}\right) = K(\lambda)$$

bo'ladi, bunda

$$K(\lambda) = \sum_{k=-\infty}^{\infty} (-1)^k e^{-2k^2 \lambda^2}. \quad (119)$$

Agar

$$D_n > \frac{\lambda}{\sqrt{n}}$$

bo'lsa, H_0 gipoteza rad etiladi.

1346. $\sigma^2 = 4$, $n = 36$, $\bar{X} = 64$, $H_0: a = 6$ gipotezani $H_1: a > 6$ gipotezada 0,05 qiymatlilik darajasida tekshiring.

Yechish. $\alpha = 0,05$ dan $\Phi_0(Z_{kr}) = \frac{1-2\alpha}{2} = \frac{1-0,1}{2} = 0,45$, Laplas funksiyasining 2-jadvalidan $Z_{kr} = 1,65$ va $S_2 = (1,65; +\infty)$.

Statistik mezonni kuzatilgan qiymatini hisoblaymiz:

$$Z_k = \sqrt{n} \frac{\bar{X} - a_0}{\sigma} = \sqrt{36} \frac{6,4 - 6}{2} = 1,2 \Rightarrow Z_k = 1,2 < 1,65 = Z_{kr}.$$

Demak, H_0 gipoteza $\alpha = 0,05$ qiymatlilik darajasi bilan qabul qilinadi.

1347. $\sigma^2 = 9$, $n = 400$, $\bar{X} = 4,8$, $H_0: a = 5$ gipotezani $H_1: a < 5$ gipotezada 0,01 qiymatlilik darajasida tekshiring.

Yechish. $\alpha = 0,01$ dan $\Phi_0(Z_{kr}) = \frac{1-2\alpha}{2} = \frac{1-0,2}{2} = 0,49$, Laplas funksiyasining 2-jadvalidan: $Z_{kr} = 2,33$ va $S_2 = (-\infty; -2,33)$.

Statistik mezonni kuzatilgan qiymatini hisoblaymiz:

$$Z_k = \sqrt{n} \frac{\bar{X} - a_0}{\sigma} = \sqrt{400} \frac{4,8 - 5}{2} = -1,33 \Rightarrow Z_k = -1,33 > -2,33 = Z_{kr}.$$

Demak, H_0 gipoteza $\alpha = 0,01$ qiymatlilik darajasi bilan qabul qilinadi.

1348. $\sigma^2 = 9$, $n = 81$, $\bar{X} = 0,8$, $H_0: a = 0$ gipotezani $H_1: a \neq 0$ gipotezada 0,1 qiymatlilik darajasida tekshiring.

Yechish. $\alpha = 0,1$ dan $\Phi_0(Z_{kr}) = \frac{1-\alpha}{2} = \frac{1-0,1}{2} = 0,45$, Laplas funksiyasining 2-jadvalidan: $Z_{kr} = 1,65$ va $S_2 = (-\infty; -1,65) \cup (1,65; +\infty)$.

Statistik mezonni kuzatilgan qiymatini hisoblaymiz:

$$Z_k = \sqrt{n} \frac{\bar{X} - a_0}{\sigma} = \sqrt{81} \frac{0,8 - 0}{3} = 2,4 \Rightarrow Z_k = 2,4 > 1,65 = Z_{kr}.$$

Demak, H_0 gipoteza $\alpha = 0,1$ qiymatlilik darajasi bilan rad etiladi.

1349. Elektr chiroqlari ishlab chiqaruvchi firmaning ma'lum turdag'i chiroqlar uchun me'yoriy xizmat muddati 1500 soat qilib belgilangan. Yangi ishlab chiqarilgan chiroqlar partiyasini tekshirish uchun $n=10$ dona chiroq tanlandi. Bu tanlama uchun o'rtacha xizmat muddati $\bar{X}=1410$ soatni va o'rtacha tuzatilgan kvadratik chetlanish $S=90$ soatni tashkil qilgan. Olingan ma'lumotlar ishlab chiqarilayotgan chiroqlarning xizmat muddati me'yoriy xizmat muddatidan farqlanadi, degan xulosa chiqarishga asos bo'ladimi ($\alpha=0,1$ da)?

Yechish. Gipotezalarni kiritamiz: $H_0: \mu = 1500$, yani tanlama o'rtacha 1500 soatga teng bo'lgan bosh to'plamdan olingan; $H_1: \mu \neq 1500$ ya'ni tanlama o'rtacha 1500 soatga teng bo'lgan bosh to'plamdan olinmagan.

Styudent taqsimotining kritik nuqtalari 7-jadvalidan

$$T_k = t(\alpha; n-1) = t(0,1; 9) = 1,83.$$

Statistik mezonni kuzatilgan qiymatini hisoblaymiz:

$$T_k = \sqrt{n-1} \frac{\bar{X} - \mu_0}{S} = \sqrt{10-1} \frac{1410 - 1500}{90} = -3 \Rightarrow T_k = -3 < -1,83 = Z_{kr}.$$

Bundan, H_0 gipoteza $\alpha = 0,1$ qiymatlilik darajasi bilan qabul qilinadi.

Demak, chiroqlarning o'rtacha xizmat muddati o'zgargan va u me'yoriy xizmat muddatini qanoatlantiradi degan xulosa chiqarish mumkin.

1350. $n=21$, $S^2=14,3$, $\alpha=0,02$, $H_0: \sigma^2 = 6,7$, $H_1: \sigma^2 \neq 6,7$, bo'lsa H_0 gipotezani tekshiring.

Yechish. 6-jadvaldan $k=n-1=21-1=20$ va $\alpha/2=0,01$ parametrlar bo'yicha o'ng kritik nuqta $\chi^2_{2k} = 37,6$ va $k=n-1=21-1=20$ va $1-\alpha/2=0,99$

Parametrlar bo'yicha chap kritik nuqta $\chi^2_{1k} = 8,26$ ekanini topamiz.

Statistik mezonni kuzatilgan qiymatini hisoblaymiz:

$$\chi^2_k = \frac{(n-1)S^2}{\sigma_0^2} = \frac{20 \cdot 14,3}{6,7} = 42,7 \Rightarrow \chi^2_k = 42,7 > 37,6 = \chi^2_{2k}.$$

Demak, H_0 gipoteza $\alpha=0,02$ qiymatlilik darajasi bilan rad etiladi.

1351. Bosh to'plam normal taqsimotga bo'y sunishi haqidagi H_0 gipotezani tekshirish uchun tanlanma asosida empirik n_j va nazariy n_j^* chastotalar topilgan.

n_j	8	16	35	72	60	53	36
n_j^*	5	12	39	81	65	49	29

$\alpha=0,05$ qiymatlilik darajasida H_0 gipotezani tekshiring.

Yechish. Chastotalarning hajmini hisoblaymiz:

$$\sum_{j=1}^7 n_j = 8 + 16 + 35 + 72 + 60 + 53 + 36 = 280,$$

$$\sum_{j=1}^7 n_j^* = 5 + 12 + 39 + 81 + 65 + 49 + 29 = 280.$$

χ^2 kriteriyaning χ_k^2 qiymatlar jadvalini keltiramiz:

j	n_j	n_j^*	$n_j - n_j^*$	$(n_j - n_j^*)^2$	$\frac{1}{n_j^*} (n_j - n_j^*)^2$
1	8	5	3	9	1,80
2	16	12	4	16	1,33
3	35	39	-4	16	0,41
4	72	81	-9	81	1,00
5	60	65	-5	25	0,38
6	53	49	4	16	0,33
7	36	29	7	49	1,69
Σ	280	280			6,94

Jadvalga muvofiq: $\chi_k^2 = 6,94$, $m = 7$, $r = 2$, chunki taqsimot normal. U holda

$$k = 7 - 2 - 1 = 4.$$

$k = 4$, $\alpha = 0,05$ parametrlarda 6-jadvaldan topamiz

$$\chi_{kr}^2 = 9,5, \quad \chi_k^2 = 6,94 < 9,5 = \chi_{rk}^2.$$

Demak, H_0 gipoteza qabul qilinadi.

1352. Tanga 4040 marta tashlanadi. $n_1 = 2048$ marta gerb tomon tushishi va $n_2 = 1992$ marta raqam tomoni tushishi kuzatildi. Bu natijalar tanganing simmetrikligi haqidagi H_0 gipotezaga mos kelishini Kolmogorov kriteriysi bilan tekshiring ($\alpha = 0,05$).

Yechish. X tasodifiy miqdor ikkita qiymat qabul qiladi: $x_1 = -1$ (raqam) $x_2 = 1$ (gerb). Bunda $H_0: P(X = -1) = P(X = 1) = \frac{1}{2}$.

$F(x)$ va $F_n^*(x)$ larni topamiz:

x_i	-1	1
p_i	0,5	0,5

dan

$$F(x) = \begin{cases} 0, & \text{agar } x < -1, \\ 0,5, & \text{agar } -1 < x \leq 1, \\ 1, & \text{agar } x > 1; \end{cases}$$

x_i	-1	1
n_i	1992	2048
p_i	0,493	0,507

dan

$$F^*(x) = \begin{cases} 0, & \text{agar } x < -1, \\ 0,493, & \text{agar } -1 < x \leq 1, \\ 1, & \text{agar } x > 1. \end{cases}$$

Bundan

$$D_n = \max |F(x) - F_n^*(x)| = |0,5 - 0,493| = 0,007.$$

Kolmogorov taqsimoti jadvaliga asosan $K(\lambda_\alpha) = 1 - 0,05 = 0,95$ da $\lambda_\alpha = 1,358$.

U holda

$$D_0 = \frac{1,358}{\sqrt{4040}} \approx 0,021 \Rightarrow D_n = 0,007 < 1,358 = D_\lambda.$$

Demak, H_0 gipoteza qabul qilinadi.

Quyidagi masalalarni yeching

1353. $\sigma^2 = 4$, $n = 36$, $\bar{X} = 6,2$, da H_0 gipotezani H_1 gipotezada α qulaylik darajasi bilan tekshiring: 1) $H_0: \mu = 6$, $H_1: \mu > 6$, $\alpha = 0,1$; 2) $H_0: \mu = 5$, $H_1: \mu \neq 5$, $\alpha = 0,05$; 3) $H_0: \mu = 7$, $H_1: \mu < 7$, $\alpha = 0,01$;

1354. Atirgul ko'chatlarining bo'yisi o'rtacha $\mu = 43$ sm va dispersiyasi $\sigma^2 = 9$ ga teng bo'lgan normal taqsimotga ega. 15 dona ko'chat o'tqazish kerak bo'lgan maydonga o'g'itlar normadan 2 baravar ko'p solingan. Bunda ko'chatlarning o'rtacha bo'yisi 46 sm ga yetgan. Normadan ortiqcha solingan o'g'itlar foyda bermadi degan xulosa chiqarishga asos bormi?

1355. $S = 12$, $n = 16$, $\bar{X} = 12,4$, da H_0 gipotezani H_1 gipotezada α qulaylik darajasi bilan tekshiring: 1) $H_0: \sigma = 11,8$, $H_1: \sigma \neq 11,8$, $\alpha = 0,02$; 2) $H_0: \sigma = 12$, $H_1: \sigma > 12$, $\alpha = 0,05$; 3) $H_0: \sigma = 13$, $H_1: \sigma < 13$, $\alpha = 0,1$;

1356. Kofe 100 gr li idishga avtomat uskunada qadoqlanadi. Qadoqlanayotgan idishning og'irligi aniq og'irlikdan farq qilsa uskuna sozlanadi. Ma'lum vaqtida qadoqlanayotgan idishlar ajratib olinib, ularning o'rtacha og'irligi tekshiriladi va og'irlikdan chetlanish hisoblanadi. 30 dona qadoqlangan idishlar og'irliklari tahlili natijasida ularning o'rtacha og'irligi $\bar{X} = 102,4$ va tuzatilgan o'rtacha kvadratik chetlanish $S = 18,54$ ekanı aniqlangan. Uskunani sozlash zarurati bormi? (Qiymatlilik darajasi $\alpha = 0,05$)

1357. $S^2 = 16,2$, $n = 21$, da H_0 gipotezani H_1 gipotezada α qulaylik darajasi bilan tekshiring: 1) $H_0: \sigma^2 = 15$, $H_1: \sigma^2 > 15$, $\alpha = 0,01$; 2) $H_0: \sigma^2 = 17$, $H_1: \sigma^2 < 17$, $\alpha = 0,05$; 3) $H_0: \sigma^2 = 16$, $H_1: \sigma^2 \neq 16$, $\alpha = 0,02$.

1358. $S^2 = 0,24$, $n = 17$, da H_0 gipotezani H_1 gipotezada α qulaylik darajasi bilan tekshiring:

- 1) $H_0: \sigma_0^2 = 0,18$, $H_1: \sigma^2 > 0,18$, $\alpha = 0,05$;
- 2) $H_0: \sigma_0^2 = 0,20$, $H_1: \sigma^2 < 0,20$, $\alpha = 0,01$;
- 3) $H_0: \sigma_0^2 = 0,16$, $H_1: \sigma^2 \neq 0,16$, $\alpha = 0,02$.

82-§. Korrelatsion tahlil

X tasodisiy miqdorning mumkin bo'lgan har bir qiymatiga Y tasodisiy miqdorning mumkin bo'lgan bitta qiymati mos qo'yilgan bog'lanishga **funktional bog'lanish** deyiladi.

X tasodifiy miqdorning mumkin bo'lgan har bir qiymatiga Y tasodifiy miqdorning biror qonuni mos qo'yilgan bog'lanishga statistik bog'lanish deyiladi.

Statistik bog'langan X va Y tasodifiy miqdorlar uchun Y ning belgilangan X larda hisoblangan matematik kutilishiga (o'rta qiymatiga) shartli o'rta qiymat deyiladi va y_x bilan belgilanadi.

Ta'rif. y_x va x lar orasidagi funksional bog'lanishga X va Y tasodifiy miqdorlar orasidagi **korrelatsion bog'lanish** deyiladi $y_x = \phi(x)$ ko'rinishda yoziladi.

$y_x = \phi(x)$ tenglamaga Y tasodifiy miqdorning X tasodifiy miqdon bo'yicha **regressiya tenglamasi** deyiladi va bu funksianing grafigi **regressiya chizig'i** deyiladi.

X va Y tasodifiy miqdorlar orasidagi korrelatsion bog'lanishi odatda korrelatsiya jadvali yordamida beriladi:

$X \backslash Y$	y_1	y_2	...	y_m	$\sum_{j=1}^m n_j$
x_1	n_{11}	n_{12}	...	n_{1m}	$\sum_{j=1}^m n_{1j}$
x_2	n_{21}	n_{22}	...	n_{2m}	$\sum_{j=1}^m n_{2j}$
...
x_k	n_{k1}	n_{k2}	...	n_{km}	$\sum_{j=1}^m n_{kj}$
$\sum_{j=1}^k n_j$	$\sum_{j=1}^m n_{1j}$	$\sum_{j=1}^m n_{2j}$...	$\sum_{j=1}^m n_{mj}$	n

Bunda x_1, x_2, \dots, x_k ; y_1, y_2, \dots, y_m - X va Y tasodifiy miqdorlarning kuzatilgan qiymatlari (diskret tasodifiy miqdorlar uchun) yoki intervallarning o'rtalari (uzluksiz tasodifiy miqdorlar uchun), n_j - (x_i, y_j) justlik uchraydigan chastota

$$n = \sum_{i=1}^k \sum_{j=1}^m n_{ij}. \quad (120)$$

Korrelatsiya jadvalini funksional bog'lanish bilan almashtirish uchun jadvaldagi har bir x_i qiymatning \bar{y}_i shartli qiymatlarini hisoblaymiz:

$$\bar{y}_i = \frac{1}{n_i} \sum_{j=1}^{n_i} y_{ij}, \quad (121)$$

bu yerda $n_i = \sum_{j=1}^{n_i} n_{ij}$.

X va Y tasodifiy miqdorlar orasidagi korrelatsion bo'g'lanishning koordinata tekisligi nuqtalari bilan berilgan geometrik tasviriga **korrelatsiya maydoni** deyiladi.

Korrelatsiya maydonining $(\bar{x}_i; \bar{y}_i)$ nuqtalarini tutashtiruvchi siniq chizig'iga X ning Y bo'yicha **empirik regressiya chizig'i** deyiladi.

Agar empirik regressiya chizig'iga yaqin bo'lgan biror silliq chiziq bilan almashtirilsa, bu chiziqa **nazariy regressiya chizig'i** deyiladi.

Nazariy regressiya chizig'i to'g'ri chiziqdan iborat bo'ladi:

$$y_i = b_0 + b_1 x_i. \quad (122)$$

Bunda b_0 va b_1 noma'lum parametrlarni bir nechta usul bilan topish mumkin.

Parametrlarni topishning eng kichik kvadratlar usulida b_0 va b_1 noma'lum parametrlar shunday topiladiki, bunda (121) formula bilan topilgan y_i qiymatning (120) formula bilan hisoblangan \bar{y}_i empirik shartli o'rta qiymatdan chetlanishi kvadratinining yig'indisi eng kichik bo'lishi, ya'ni

$$S = \sum_{i=1}^k (y_{ij} - \bar{y}_i)^2 n_i = \sum_{i=1}^k (b_0 + b_1 x_i - \bar{y}_i)^2 n_i \quad (122)$$

funksiya minimumga erishishi ta'minlaydi.

Ekstremum mavjud bo'lishining zaruriy shartini topamiz:

$$\begin{cases} \frac{\partial S}{\partial b_0} = 2 \sum_{i=1}^k (b_0 + b_1 x_i - \bar{y}_i) n_i = 0, \\ \frac{\partial S}{\partial b_1} = 2 \sum_{i=1}^k (b_0 + b_1 x_i - \bar{y}_i) \cdot x_i n_i = 0 \end{cases}$$

Sistemada almashtirishlar bajaramiz:

$$\begin{cases} \frac{b_0}{n} \sum_{i=1}^k n_i + \frac{b_1}{n} \sum_{i=1}^k x_i n_i = \frac{1}{n} \sum_{i=1}^k y_i n_i, \\ \frac{b_0}{n} \sum_{i=1}^k x_i n_i + \frac{b_1}{n} \sum_{i=1}^k x_i^2 n_i = \frac{1}{n} \sum_{i=1}^k x_i y_i n_i. \end{cases}$$

(121) tenglik asosida topamiz:

$$\begin{aligned} \sum_{i=1}^k \bar{y}_i n_i &= \sum_{i=1}^k \left(\frac{1}{n} \sum_{j=1}^m y_j n_j \right) n_i = \sum_{i=1}^m \sum_{j=1}^m y_j n_j = \sum_{j=1}^m y_j \sum_{i=1}^n n_j = \sum_{j=1}^m y_j n_j, \\ \sum_{i=1}^k \bar{y}_i x_i n_i &= \sum_{i=1}^k x_i \left(\frac{1}{n} \sum_{j=1}^m y_j n_j \right) n_i = \sum_{i=1}^n \sum_{j=1}^m x_i y_j n_j. \end{aligned}$$

Bu almashtirishni sistemaga qo'yamiz va

$$\begin{cases} \frac{b_0}{n} \sum_{i=1}^k n_i + \frac{b_1}{n} \sum_{i=1}^k x_i n_i = \frac{1}{n} \sum_{i=1}^k y_i n_i, \\ \frac{b_0}{n} \sum_{i=1}^k x_i n_i + \frac{b_1}{n} \sum_{i=1}^k x_i^2 n_i = \frac{1}{n} \sum_{i=1}^k \sum_{j=1}^m x_i y_j n_j. \end{cases}$$

yoki

$$\begin{cases} b_0 + b_1 \bar{x} = \bar{y}, \\ b_0 \bar{x} + b_1 \bar{x}^2 = \bar{x}\bar{y}, \end{cases}$$

ko'rinishga keltiramiz, bu yerda

$$\frac{1}{n} \sum_{i=1}^k x_i n_i = \bar{x}, \quad \frac{1}{n} \sum_{j=1}^m y_j n_j = \bar{y}, \quad \frac{1}{n} \sum_{i=1}^k x_i^2 n_i = \bar{x}^2, \quad \frac{1}{n} \sum_{i=1}^k \sum_{j=1}^m y_j x_i n_j = \bar{x}\bar{y}. \quad (124)$$

Sistemaning birinchi tenglamasidan ushbuni topamiz:

$$b_0 = \bar{y} - b_1 \bar{x}.$$

b_0 ni (122) tenglamaga qo'yamiz:

$$y_x - \bar{y} = b_1 (x - \bar{x}). \quad (125)$$

(125) tenglamadagi b_1 regressiya koeffitsiyenti deyiladi va $b_1 = \rho_{xy}$ almashtirish bajarib, quyidagi tenglikni hosil qilamiz:

$$y_x - \bar{y} = \rho_{xy} (x - \bar{x}) \quad (126)$$

Bu tenglama Y ning X bo'yicha regressiya tenglamasi deyiladi. Tenglamani yechamiz:

$$\rho_{xy} = b_1 = \frac{\bar{xy} - \bar{x}\bar{y}}{\bar{x}^2 - \bar{x}^2} = \frac{\bar{xy} - \bar{x}\bar{y}}{\sigma_x^2} = \frac{\mu}{\sigma_x^2}. \quad (127)$$

Bu yerda

$$\bar{\sigma}_x^2 = \bar{x}^2 - \bar{x}^2 = \frac{1}{n} \sum_{i=1}^k x_i^2 n_i - \bar{x}^2, \quad (128)$$

$$\mu = \bar{x} \bar{y} - \bar{x} \bar{y} = \frac{1}{n} \sum_{i=1}^k x_i y_i n_i - \bar{x} \bar{y}. \quad (129)$$

Bunda μ kattalikka **tanlanma korrelatsiya momenti** yoki **tanlanma korrelatsiya** deyiladi.

X ning Y bo'yicha **regressiya tenglamasi** ham shu tartibda topiladi

$$x_y - \bar{x} = \rho_{xy} (y - \bar{y}). \quad (130)$$

Bu yerda

$$\rho_{xy} = b_1 = \frac{\bar{x} \bar{y} - \bar{x} \bar{y}}{\bar{y}^2 - \bar{y}^2} = \frac{\bar{x} \bar{y} - \bar{x} \bar{y}}{\bar{\sigma}_y^2} = \frac{\mu}{\bar{\sigma}_y^2}. \quad (131)$$

$$\bar{\sigma}_y^2 = \bar{y}^2 - \bar{y}^2 = \frac{1}{n} \sum_{i=1}^k y_i^2 n_i - \bar{y}^2. \quad (132)$$

X va Y tasodifiy miqdorlar uchun chiziqli bo'limgan korrelatsiyada regressiya tenglamasi chiziqli korrelatsiyadagi kabi eng kichik kvadratlar usuli bilan topiladi.

$$y_x = b_0 + b_1 x + b_2 x^2,$$

bunda b_0 , b_1 , b_2 larni

$$S = \sum_{i=1}^k (y_x - \bar{y})^2 n_i = \sum_{i=1}^k (b_0 + b_1 x_i + b_2 x_i^2 - \bar{y})^2 n_i$$

funksiyaning minimumga erishish shartidan keltirib chiqarilgan

$$\begin{cases} b_0 \sum_{i=1}^k n_i + b_1 \sum_{i=1}^k x_i n_i + b_2 \sum_{i=1}^k x_i^2 n_i = \sum_{i=1}^k \bar{y}_i n_i, \\ b_0 \sum_{i=1}^k x_i n_i + b_1 \sum_{i=1}^k x_i^2 n_i + b_2 \sum_{i=1}^k x_i^3 n_i = \sum_{i=1}^k x_i \bar{y}_i n_i, \\ b_0 \sum_{i=1}^k x_i^2 n_i + b_1 \sum_{i=1}^k x_i^3 n_i + b_2 \sum_{i=1}^k x_i^4 n_i = \sum_{i=1}^k x_i^2 \bar{y}_i n_i, \end{cases}$$

sistemadan topiladi.

$$y_x = \frac{b}{x}, \quad y_x = b a^x, \quad y_x = b e^x, \quad y_x = b x^n$$

Bu ko'rinishdagi chiziqli bo'limgan korrelatsiyalarda tengliklarni har ikki tomonini logarifmlash va belgilashlar kiritish orqali ular chiziqli korrelatsiyaga keltiriladi. Korrelatsion bog'lanishning

zichligini bahosi sifatida o'rtacha kvadratik chetlashishlarning o'zgarishiga asoslangan kattalik, **korrelatsiya koeffitsiyenti**

$$r = \rho_{xy} \frac{\bar{\sigma}_x}{\bar{\sigma}_y} \Rightarrow r = \frac{\bar{xy} - \bar{x} \cdot \bar{y}}{\bar{\sigma}_x \bar{\sigma}_y} \quad (133)$$

olinadi.

Chiziqli bo'limagan korrelatsiyada X va Y tasodifiy miqdorlar orasidagi korrelatsion bog'lanish zichligi tanlanma korrelatsion nisbat deb ataluvchi quyidagi ifoda bilan aniqlanadi:

$$\eta_{xy} = \rho_{xy} \sqrt{1 - \frac{\bar{\sigma}_x^2}{\bar{\sigma}_y^2}}. \quad (134)$$

1359. $y_x = b_0 + b_1 x$ chiziqli korrelatsiyaga keltiring.

Yechish. Tengliklarni har ikki tomonini logarifmlash va belgilashlar kiritish orqali ular chiziqli korrelatsiyaga keltiriladi.

$$\ln y_x = \ln b_0 + x \ln b_1 \Rightarrow \bar{y} = \ln y_x, \quad b_0 = \ln b_0, \quad b_1 = \ln b_1 \Rightarrow \bar{y} = b_0 + b_1 x.$$

1360. Bir tipdag'i 50 ta korxonaning sutkalik mahsulot ishlab chiqarishi $Y(t)$ va asosiy ishlab chiqarish fondlari X (mln.so'm) berilgan.

$X \backslash Y$	9	13	17	21	25	$\sum_{j=1}^m n_y$
22,5	2	1	-	-	-	3
27,5	3	6	4	-	-	13
32,5	-	3	11	7	-	21
37,5	-	1	2	6	2	11
42,5	-	-	-	1	1	2
$\sum_{j=1}^k n_y$	5	11	17	14	3	50

1) Y ning X bo'yicha regressiya tenglamasini tuzing. 2) Asosiy ishlab chiqarish fondlari X va korxonaning sutkalik ishlab chiqarishi Y orasidagi bog'lanish zichligini hisoblang.

Yechish. 1) Korrelatsyon jadvalga muvofiq har bir x_i uchun (121) formula yordamida shartli o'rta qiymatni topamiz:

$$\bar{y}_1 = \frac{1}{3}(9 \cdot 2 + 13 \cdot 1) = 10,3; \quad \bar{y}_2 = \frac{1}{13}(9 \cdot 3 + 13 \cdot 6 + 17 \cdot 4) = 13,3;$$

$$\bar{y}_3 = \frac{1}{21} (13 \cdot 3 + 17 \cdot 11 + 21 \cdot 7) = 17,8;$$

$$\bar{y}_4 = \frac{1}{11} (13 \cdot 1 + 17 \cdot 2 + 21 \cdot 6 + 25 \cdot 2) = 20,3; \quad \bar{y}_5 = \frac{1}{2} (21 \cdot 1 + 25 \cdot 1) = 23.$$

Yig'indilarni hisoblaymiz:

$$\sum_{i=1}^5 x_i n_i = 22,5 \cdot 3 + 27,5 \cdot 13 + 32,5 \cdot 21 + 37,5 \cdot 11 + 42,5 \cdot 2 = 1605;$$

$$\sum_{i=1}^5 x_i^2 n_i = 22,5^2 \cdot 3 + 27,5^2 \cdot 13 + 32,5^2 \cdot 21 + 37,5^2 \cdot 11 + 42,5^2 \cdot 2 = 52612,5;$$

$$\sum_{i=1}^5 y_i n_i = 9 \cdot 5 + 11 \cdot 13 + 17 \cdot 17 + 21 \cdot 14 + 25 \cdot 3 = 846;$$

$$\sum_{i=1}^5 \sum_{j=1}^5 x_i y_j n_{ij} = 22,5 \cdot 9 \cdot 2 + 22,5 \cdot 1 \cdot 13 + \dots + 42,5 \cdot 1 \cdot 21 + 42,5 \cdot 1 \cdot 25 = 27875.$$

(124)-(130) formulalar bilan regressiya tenglamasining tanlanma xarakteristikalari va parametrlarini aniqlaymiz:

$$\bar{x} = \frac{1605}{50} = 32,1; \quad \bar{y} = \frac{846}{50} = 16,92; \quad \bar{\sigma_x^2} = \frac{52612,5}{50} - 32,1^2 = 21,84;$$

$$\mu = \frac{27895}{50} - 32,1 \cdot 16,92 = 557,9 - 543,132 = 14,768; \quad \rho_{xy} = \frac{14,768}{21,84} = 0,6762.$$

Demak, regressiya tenglamasi

$$y_x - 16,92 = 0,6762(x - 32,1) \Rightarrow y_x = 0,6762x - 4,79.$$

Regressiya tenglamasidan ko'rinaladiki, asosiy ishlab chiqarish fondlari 1mln so'm.

2) $\bar{\sigma}_y$ ni topish uchun quyidagi yig'indini topamiz:

$$\sum_{i=1}^5 y_i^2 n_i = 9^2 \cdot 5 + 13^2 \cdot 11 + 17^2 \cdot 17 + 21^2 \cdot 14 + 25^2 \cdot 3 = 15226.$$

(132) formulaga asosan

$$\bar{\sigma}_y^2 = \frac{15226}{50} - 16,92^2 = 18,2336.$$

(133) formulaga asosan:

$$r = 0,6762 \cdot \sqrt{\frac{21,84}{18,2336}} = 0,6762 \cdot 1,0944 = 0,74.$$

Demak, X va Y lar orasidagi bog'lanish to'g'ri chiziqli va yetarlicha zich.

Quyidagi masalalarni yeching

1361. X va Y tasodifiy miqdorlar orasidagi korrelatsion bo‘g‘lanish o‘rganilganda mos qiymatlarini o‘lchash natijalari quyidagi jadvalda berilgan:

	x_i	0,3	0,4	0,5	0,5	0,6	0,7	0,8	0,9	0,9	1,0	1,1	1,4
1)	y_i	0,2	0,8	1,2	1,1	1,8	2,5	3,1	3,4	3,8	4,1	4,4	5,9

Y ning X bo‘yicha $y_x = b_0 + b_1x$ regressiya tenglamasini tuzing va ular orasida bog‘lanish zichligini baholang.

Y

2)	x_i	0,3	0,4	0,5	0,5	0,6	0,7	0,8	0,9	0,9	1,0	1,1	1,4
	y_i	0,2	0,8	1,2	1,1	1,8	2,5	3,1	3,4	3,8	4,1	4,4	5,9

Y ning X bo‘yicha $y_x = b_0 + b_1x + b_2x^2$ regressiya tenglamasini tuzing va ular orasidi bog‘lanish zichligini baholang.

EHTIMOLLIK FUNKSIYALARINING JADVALLARI

1-jadval

$$\varphi(x) = \frac{1}{\sqrt{2\pi}} e^{-\frac{x^2}{2}} \text{ funksiya qiymatlari}$$

MUNDARIJA

I. SO'Z BOSHI	3
I BOB. KO'P O'ZGARUVCHILI FUNKSIYALAR	6
1-§. Ko'p o'zgaruvchili funksiyalar haqida umumiy tushuncha	6
2-§. Ko'p o'zgaruvchili funksiyalarning to'liq orttirmasi va xususiy hosilasi.....	9
3-§. Ko'p o'zgaruvchili funksiyalarning to'la differensiali. Yuqori tartibli xususiy hosilalar va differensiallar.....	11
4-§. Murakkab va oshkormas funksiyalarning xususiy hosilalari	14
5-§. Sirtga o'tkazilgan urinma tekislik va normal tenglamalari. Ko'p o'zgaruvchili funksiyaning ekstremumlari.....	17
II BOB. KARRALI VA EGRI CHIZIQLI INTEGRALLAR	20
6-§. Ikki o'lchovli integrallar	20
7-§. Ikki karrali integralda o'zgaruvchilarni almashtirib integrallash, qutb koordinatalar sistemasida ikki karrali integrallarni hisoblash.....	22
8-§. Ikki o'lchovli integralning geometriyaga tatbiqi	24
9-§. Ikki o'lchovli integralning fizikaga tatbiqi	28
10-§. Uch o'lchovli integrallar.....	30
11-§. Uch o'lchovli integrallarni tatbiqlari.....	32
12-§. Egri chiziqli integrallar	34
13-§. Ikkinci tur egri chiziqli integrallarni integrallash yo'liga bog'liq emasligi. Funksiyaning aslini to'la differensiali bo'yicha tiklash. Grin formulasi	38
14-§. Sirt integrali	41
III BOB. MAYDONLAR NAZARIYASI ELEMENTLARI	46
15-§. Skalyar maydon. Yo'nalish bo'yicha hosila. Gradiyent. Yuksaklik chiziqlari va sirlari. Oriyentirlangan sirt	46
16-§. Vektor maydon. Vektor chiziqlar. Vektor maydon divergensiyasi. Ostrogradskiy-Gauss formulasi	49
17-§. Vektor maydonning asosiy sinflari	55
IV BOB. SONLI VA FUNKSIONAL QATORLAR	58
18-§. Asosiy ta'riflar, qator yaqinlashishining zaruriy sharti	58
19-§. Musbat hadli qatorlar yaqinlashishining taqqoslash va Dalamber alomatlari	60

20-§. Musbat hadli qatorlar yaqinlashishining Koshi va integral alomatlari	62
21-§. Ishorasi navbatlashuvchi qatorlar. Leybnis teoremasi	64
22-§. Funksional qatorlar	66
23-§. Darajali qatorlar.....	70
24-§. Teylor va Makloren qatorlari. Darajali qatorni taqribiy hisoblashga tatbiqi. Darajali qatorni yordamida differensial tenglamani yechish.....	72
25-§. Furye qatori. Toq va just, davri 2/ bo'lgan funksiyalarning Furye qatorlari	76
V BOB. ODDIY DIFFERENSIAL TENGLAMALAR	79
26-§. Birinchi tartibli differensial tenglamalar, o'zgaruvchisi ajralgan va ajraladigan tenglamalar	79
27-§. Birinchi tartibli bir jinsli va bir jinsliga keltiriladigan differensial tenglamalar	82
28-§. Chiziqli differensial tenglamalar. Bernulli tenglamasi.....	85
29-§. To'la differensialli tenglamalar va integrallovchi ko'paytuvchi.	87
30-§. Hosilaga nisbatan yechilmagan birinchi tartibli differensial tenglamalar	90
31-§. n -darajali 1-tartibli differensial tenglama	94
32-§. Argument oshkor holda qatnashmagan va funksiya oshkor holda qatnashmagan differensial tenglamalar	95
33-§. Lagranj va Klero tenglamalari	96
34-§. Rikkati tenglamasi.....	100
35-§. Yuqori tartibli differensial tenglamalar. Tartibi pasayadigan differensial tenglamalar	102
36-§. Noma'lum funksiya oshkor holda qatnashmagan tenglamalar.	105
37-§. Argument oshkor holda qatnashmagan tenglamalar	108
38-§. Noma'lum funksiya va hosilaga nisbatan bir jinsli tenglamalar	109
39-§. Yuqori tartibli chiziqli tenglamalar	111
40-§. Yuqori tartibli chiziqli bir jinsli tenglamalar	113
41-§. O'zgarmas koefitsiyentli yuqori tartibli chiziqli bir jinsli differensial tenglamalar	116
42-§. Yuqori tartibli chiziqli bir jinsli bo'lmagan differensial tenglamalar	119

43-§. Eyler tenglamasi.....	129
44-§. Differensial tenglamalar sistemasini o'miga qo'yish usulida yechish.....	132
45-§. O'zgarmas koeffitsiyentli chiziqli bir jinsli differensial tenglamalar sistemasini Eyler usulida yechish.....	135
46-§. Differensial tenglamalar sistemasini birinchi integral usulida yechish.....	140
47-§. O'zgarmas koeffitsiyentli chiziqli bir jinsli bo'lmanan differensial tenglamalar sistemasini integrallash usuli	143
VI BOB. KOMPLEKS O'ZGARUVCHILI FUNKSIYALAR	150
48-§. Kompleks sonning algebraik shakli va ular ustida amallar	150
49-§. Kompleks sonning trigonometrik shakli va ular ustida amallar.....	152
50-§. Kompleks o'zgaruvchili funksiyalar va ularning aniqlanish sohasi, limiti va uzlucksizligi.....	155
51-§. Kompleks o'zgaruvchili funksiyaning hosilasi.....	158
52-§. Konform akslantirish	161
53-§. Kompleks o'zgaruvchili funksiyaning integrali	165
54-§. Kompleks o'zgaruvchili qatorlar. Teylor va Loran qatorlari	168
55-§. Funksiyaning chegirmasi. Koshi teoremasi	176
56-§. Chegimalarni integral hisoblashga qo'llash	178
VII BOB. MATEMATIK – FIZIKA TENGLAMALARI	182
57-§. Birinchi tartibli xususiy hosilali differensial tenglamalar.....	182
58-§. O'zgarmas koeffitsiyentli ikkinchi tartibli xususiy hosilali tenglamalarni kanonik ko'tinishga keltirish.....	186
59-§. To'lqin tarqalish tenglamasiga Koshi masalasi. Dalamber formulasi	190
60-§. Tor tebranish tenglamasiga qo'yilgan masalani	193
Furye usulida yechish	193
61-§. Issiqlik tarqalish tenglamasiga qo'yilgan masalani	201
Furye usulida yechish	201
62-§. Elliptik tenglamaga qo'yilgan Dirixle masalasini doirada yechish.....	208
63-§. Elliptik tenglamaga Dirixle masalasini to'g'ri to'rtburchakda va halqada yechish	210

VIII BOB. OPERATSION HISOB ELEMENTLARI	219
64-§. Laplas tasviri. Funksiyaning tasvirini topish.....	219
65-§. Funksiyaning tasviridan originalni topish	222
66-§. Originalni differensiallash va integrallash.....	227
67-§. O'zgarmas koeffitsiyentli chiziqli differensial tenglamani operatsion hisob yordamida yechish.....	229
68-§. O'zgarmas koeffitsiyentli chiziqli differensial tenglamalar siste- masini va integral tenglamani operatsion hisob yordamida yechish ..	233
IX BOB. EHTIMOLLAR NAZARIYASI VA MATEMATIK	
STATISTIKA ELEMENTLARI.....	239
69-§. Kombinatorika elementlari. Nyuton binomi	239
70-§. Ehtimollikning ta'riflari.....	242
71-§. Ehtimollarni qo'shish, ko'paytirish teoremlari. Shartli ehtimollik	246
72-§. To'la ehtimollik formulasi. Beyses formulasi	250
73-§. Erkli sinovlar ketma-ketligi. Bernulli formulasi. Muavr-Laplas- ning lokal va integral formulalari	253
74-§. Diskret tasodifiy miqdor. Diskret tasodifiy miqdorning sonli xarakteristikalari	259
75-§. Uzluksiz tasodifiy miqdor. Uzluksiz tasodifiy miqdorning sonli xarakteristikalari	262
76-§. Tekis, ko'rsatkichli va normal taqsimot qonunlari	265
77-§. Chebishev tengsizligi. Katta sonlar qonuni. Markaziy limit teorema	271
78-§. Ikki o'lchovli tasodifiy miqdorlar va ularning sonli xarakteristikalari	275
79-§. Matematik statistikaning asosiy tushunchalari. Poligon va gistogramma	282
80-§. Taqsimot noma'lum parametrlerining statistik baholari	291
81-§. Statistik gipoteza va ularni tekshirish. Styudent taqsimoti	298
82-§. Korrelatsion tahlil.....	306
EHTIMOLLIK FUNKSIYALARINING JADVALLARI	314
JAVOBLAR	321
FOYDALANILGAN ADABIYOTLAR	353

**YUSUPJON PULATOVICH APAKOV,
BAXRIDDINXO'JA ISMOILOVICH JAMALOV,
AKBARXO'JA MAMAJONOVICH TO'XTABAYEV**
